

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

DISTRICT OF CONNECTICUT, ss.

BE IT REMEMBERED, That on the eighth day of August, in the forty-sixth year of the Independence of the United States of America, JEDIDIAH MORSE, and RICHARD C. MORSE, of the said District, have deposited in this Office the title of a Book, the right whereof they claim as Authors and Proprietors, in the words following, to wit :—" A New Universal Gazetteer, or Geographical Dictionary, containing a description of the various countries, provinces, cities, towns, seas, lakes, rivers, mountains, capes, &c. in the known world. With an Appendix, containing an account of the monies, weights and measures of various countries, with tables illustrating the population, commerce, and resources of the United States. Accompanied with an Atlas. By Jedidiah Morse, D. D. A. A. S. S. H. S. and Richard C. Morse, A. M. Third edition, revised and corrected."

In conformity to the act of Congress of the United States, entitled, "An Act for the encouragement of learning, by securing the copies of Maps, Charts, and Books, to the authors and proprietors of such copies, during the time therein mentioned."

CHARLES A. INGERSOLL, *Clerk of the District of Connecticut.*

EXTRACTS FROM THE PREFACE TO THE THIRD EDITION.

THE basis of the present volume, so far as relates to the Eastern Continent, is the New Edinburgh Gazetteer, in six volumes, “executed by six different authors of literary eminence, each taking a separate department.” This work is an ample digest of the most valuable geographical materials recently published in Great Britain, and appears generally to have faithfully noticed all the modern changes; a point of the more importance, since the common Gazetteers published in England still continue the insertion of obsolete divisions, and even describe the most noted kingdoms with boundaries which have long since ceased to exist. Besides the information derived from the Edinburgh Gazetteer, the articles of the Eastern Continent have been improved from a variety of sources, particularly from the works of the best German geographers.

In regard to our own country, the principal dependence in respect to what may be called permanent geography, has been on the various geographical works of the senior author; the information in which has been gradually collected during a space of more than thirty years, partly by correspondence with gentlemen of the first intelligence in the various States, and partly by consultation of standard works, as they have appeared from time to time. Much information has also been recently collected by correspondence, and extensive personal travels. The valuable works which have lately been published on various parts of the country, have been systematically, and, it is believed, faithfully digested. A catalogue of the publications to which we are principally indebted, is annexed to this preface.

Particular attention has been given to the accounts of Missionary Stations. The principal authorities in this department of the work are the London Missionary Register, the Missionary Herald, published in Boston, and the Reports of the several Missionary Societies. Most of the tables in the Appendix, and the principal articles relating to the United States, were prepared by SIDNEY E. MORSE, A. M. In the tables on the Commerce and Resources of the United States, he derived much assistance from the Statistical works of Pitkin and Seybert; but the statements are generally exhibited in a new form, and are frequently the result of laborious calculations: many of them, also, are brought down to the present time from other sources.

Abbreviations, though long since abandoned in Great Britain, are still used by German Geographers, and have been adopted by us. When not carried to excess, they are attended with obvious advantages. In the present volume, they are used only in words of frequent occurrence, and the explanation is generally obvious.

NEW-HAVEN, August 8th, 1821.

PREFACE TO THE FOURTH EDITION.

THE sale of the third edition of this work, consisting of 3,000 copies, in the short space of fifteen months, demands the grateful acknowledgments of the authors.

In a work of this nature, it is impossible to avoid error. All that can be reasonably required of the General Geographer, is a diligent collection, and faithful use, of the best materials. To accomplish this we have spared neither industry nor expense ; yet none can be more sensible than we ourselves, that some articles will be found defective, and some statements erroneous. We shall be much obliged by any communications, which will enable us to improve a future edition. To the Heads of the different departments of the General Government, and to all the gentlemen, who have obligingly furnished us with information for the improvement of the present edition, we tender our sincere thanks.

Aberdeen, city, Scotland, in Aberdeen shire, on the Don, a mile from the sea. It is called Old Aberdeen, in contradistinction to the town of that name about a mile distant, from which it is quite separate, both in civil and ecclesiastical constitution. An university, called King's College, was founded in 1506. It has professorships of divinity, civil law, medicine, humanity, Greek, moral philosophy, natural philosophy, mathematics, and Oriental languages. Belonging to the university are a very considerable number of bursaries or endowments for the support of students; the total number of whom in 1816—1817, was 187. The library contains 12,935 volumes of printed works, and several curious manuscripts. Pop. 1,911.

Aberdeen, seaport, Scotland, Aberdeen co. and the principal city of Scotland N. of the river Forth. A fine bridge, of a single arch, of 132 feet span, of granite, was erected recently in Union-street, at an expense of 10,000*l*. There are twenty one places for divine worship in this city, for different denominations of Christians. An university, called Marischal College, was founded here in the year 1593. The buildings, which occupy a considerable area towards the north-east part of the city, have been erected at different periods, and are very irregular. An observatory has been constructed over a portion of them lately, elevated about sixty feet above the court below, and commanding a spacious view. This institution has a good library, containing about 10,000 volumes.—The two universities, King's College and Marischal College, are quite distinct and independent of each other, and some attempts for their union under one system have proved abortive. Marischal College was attended by 220 students during the winter session 1816—1817, besides 105 stu-

dents of divinity, alternately attending each university. Trade and manufactures are actively prosecuted to a large extent. The latter chiefly consist of woollen, linen, and cotton, in all their different stages. The principal exports are grain, fish, thread, hosiery, cotton, and linen goods, and not less than 7,000 tons of granite yearly, for paving the streets of London. Pop. 33,639. 108 m. N. of Edinburgh. Lon. 2° 8' W. Lat. 57° 9' N.

Aberdeen, co. Scotland, bounded N. and E. by the German ocean, on the S. by Perth, Forfar, and Kincardine. Pop. 135,075.

Aberdeen, t. Brown co. Ohio, on the Ohio, 9 m. S.E. of Ripley, 17 S.W. from West-Union. Pop. 87.

Aby, t. Sweden, in W. Bothnia, 10 m. S. Pitea.

Abyssinia, an extensive kingdom of Africa, bounded E. by the Red sea, N. by Sennaar, W. and S. by Sennaar, Kordofan and vast and barbarous regions; about 770 m. long, and 550 broad. The ranges of mountains, with which it is every where intersected, preserve the air cool, and afford a supply of water sufficient to maintain fertility. The declivities of the mountains afford the most agreeable situations, upon which most of the towns and villages are built. In consequence of this physical structure, Abyssinia is exceedingly fertile, and is exempted in a great measure from that sand which dooms so large a portion of Africa to sterility. Wheat is raised in considerable quantity; teff grows on every soil, and affords the bread which is in universal use. One of the most important natural curiosities of Abyssinia, is the great plain of salt, between Amphila and Massuah. It covers a flat plain, about four days journey across. It is perfectly pure and hard for about two feet deep. It is cut with an adze into pieces, which not only serve as seasoning to food, but even circulate as money in Abyssinia. The digging of the salt is attended with considerable danger,

from the vicinity of the Galla, who frequently attack those employed, as well as the caravans, which convey the salt to Antalo.—The government is a despotism; the power of the sovereign has no limit; there is no assembly of the people, nor any nobles to controul its exercise. But this absolute power is set at open defiance, not only by a number of savage tribes established in the heart of his dominions, but by the governor of the smallest province; by every one in short who can collect around him a body of armed men. Civil war rages thus almost without intermission. This perpetual state of civil war and confusion seems to be the main cause of that peculiar barbarism and brutality, by which the manners of Abyssinia are characterised. Dead bodies lie in the streets, without being allowed the rites of sepulture, but are left to be devoured by the dogs and hyænas. They eat raw flesh, and when on a journey, are in the habit of cutting steaks from a living animal, then closing up the wound and driving him on. Marriage in Abyssinia is a very slight connection, formed and dissolved at pleasure. Although the Abyssinians profess Christianity, their religion still retains a large share of Judaical observances. They abstain from the meats prohibited by the Mosaic law; practise circumcision, and keep both the Saturday and Sunday as Sabbaths. The Coptic patriarch of Cairo continues still to be the nominal head of the church, from whom the Abuna, the resident head, receives his investiture. Their veneration for the Virgin is unbounded. Their saints are very numerous, and surpass in miraculous power even those of the Romish calendar. The foreign commerce of Abyssinia is carried on entirely by way of Massuah, whence the communication with the interior is maintained by the channel of Adowa. The imports are chiefly lead, block tin, gold foil, Persian carpets, raw silks from China, velvets, French broadcloths, coloured skins from Egypt, glass beads and decanters from Venice. The exports consist of gold, ivory, and slaves. The population is variously estimated from 2 to 3,000,000.

Acapulco, or *Los Reges*, t. Mexico, on the coast of the Pacific ocean. Its port is one of the finest in the world, and capable of containing any number of vessels in perfect safety. The principal trade of Acapulco is with Manilla, one of the Philippine islands, to which it has for a long period sent out annually a large vessel, called a galleon. The lading from Acapulco to Manilla generally consists of silver, a very small quantity of cochineal from Oxaca, of cocoa from Guayaquil and Carraccas, wine, oil, and Spanish wool. The value of the precious metals, exported in a single vessel, including what is not registered, amounts

in general to about 200,000*l.* or 250,000*l.* The galleon generally sails from Manilla in the middle of July, or beginning of August, when the southwest monsoon is already completely established. Its cargo consists of muslins, printed calicoes, coarse cotton shirts, raw silks, china, silk stockings, articles of jewelry, spices, and aromatics. The voyage formerly lasted from five to six months, but now only three or four. As soon as the intelligence arrives at Mexico, that the galleon has been seen off the coast, the roads are covered with travellers, and every merchant hastens to treat with the supercargoes who arrive from Manilla. Acapulco, owing to its position, is extremely unhealthy; and the unfortunate inhabitants, besides being tormented with earthquakes and hurricanes, breathe a burning air, full of insects, and vitiated by putrid emanations. Bilious fevers, and the *cholera morbus*, are very frequent, and the Mexicans, who descend from the table land to purchase goods, on the arrival of the galleon, are frequently the victims of those diseases. Pop. 4,000, mostly people of color. At the time of the arrival of the Manilla galleon, this number is increased to 9,000. Lat. 16° 50' 29' N.

Acre, an ancient city of Palestine, a sea-port in the pachalic of Acre, which extends from the Mediterranean on the west to the river Jordan on the east. Acre stands on a bay, in a situation rendered unhealthy from the neighbouring marshes. Severe distempers are therefore prevalent during every summer; and in 1760, no less than 7000 persons fell victims to the plague. The town is small, but very populous and well fortified. Some trade is carried on in the export of cotton, and the import of rice; but the harbour is bad, though better than most others on the coast. Europeans, however, enjoy much liberty, and a great degree of respect, as well from the government as the people, who are a mixture of Turks, and Arabs. Population 18,000 or 20,000. This city has been celebrated from remote antiquity. During nearly two centuries it became the principal theatre of the crusades. In March, 1799, this city was besieged, without success, by the French, under Bonaparte. Since the siege, the fortifications have been considerably enlarged. Distant 23 m. N. N. Afghanistan, a considerable kingdom, between Persia and Hindostan, bounded E. by the Indus, N. by a range of lofty mountains, separating it from Bulkh and Budukshan, W. by Persia, Herat being its frontier town, and S. by Baloochistan. It lies between 29° and 36° N. lat. and 61° and 71° E. lon. comprehending the ancient kingdoms of Zabulistan, (Ghizne and Kandahar) and Kabulistan. The inhabitants of this country are in general Mahometans of the Soony sect. They are a generous, hospitable, and brave people, but illiterate, ferocious, and seditious. Their army is principally composed of well mounted cavalry; they have also some artillery, and a few corps of infantry, armed with swords and matchlocks. Many of the districts are still inhabited by the aboriginal Hindoos. The towns are mostly inhabited by Hindoos of the Punjab, or Mahometans of Persian or Mogul descent; but in Kabul there are persons from all parts of the East. The population is supposed not to exceed 3,000,000. The government is despotic; but the Afghans being divided into clans, the authority of the sovereign is not often exercised over them. Kandahar was the capital, but it has been transferred to Kabul.

Africa, one of the four great quarters of the world. It is the third in magnitude, and probably in population, though it is less known, and has fewer political relations with Europe, than either Asia or America. It forms a peninsula, connected with Asia by the isthmus of Suez. It is bounded on the N. by the Mediterranean, W. by the Atlantic, E. by the Red sea and the Indian ocean. Its greatest length from Cape Serra to Cape Aguilhas, includes from about the 37th of N. to the 35th of S. lat. and its greatest breadth from Cape Verd to Cape Guardafui, about the 18th of W. to the 51st of E. lon. It is 4,320 m. long, and 4,140 broad. Africa is distinguished from the other quarters of the world by its immense sand deserts. The Sahara, or the great Desert, occupies a large proportion of Africa N. of the mountains of the Moon. Very little is known about the interior of Africa. Few travellers have penetrated that burning region. The population has been commonly estimated at 150,000,000; Hassel estimates it at about 99,000,000, and the square miles at 11,652,442. The principal rivers are the Nile, Niger, Senegal, Gambia, and Congo or Zaire. The principal ranges of mountains are the Mountains of the Moon and the Mount Atlas chain. The principal exports are slaves and gold. The internal commerce is carried on almost entirely by caravans. Africa is divided into 1. *Northern Africa*, or the countries N. of the tropic of Cancer; 2. *Southern Africa*, or the countries south of the tropic of Capricorn; 3. *Eastern Africa*, or the countries lying on the east coast between the tropic of Cancer and the tropic of Capricorn; 4. *Western Africa*, or the countries on the west coast between the tropics; 5. *Central Africa*, or the countries in the interior between these four divisions.

Agra, city, cap. of the above province, and seat of the British civil authority; is on the river Jumna, 800 m. N. W. Calcutta. It is now in a ruinous state. About the middle of the 16th century, the emperor Akbar built here a palace and an extensive fort of red free stone, and changed its name to Akbarabad. In 1803, it was captured by the British army from the Mahrattas. In 1813, under the direction of the Church Missionary Society, the Rev. Dr. Corrie arrived here with Abdool Messe, a native convert; the journal of whose proceedings has excited so widely a zealous concern for the success of Missions in India. The Society possess a building, called the Kuttra, where Abdool resides, and where worship is held. In 18 months, about 50 persons with their children, embraced the Christian religion. Some of them were Fakeers, or Religious Mendicants; 6 were Mahometans of the first respectability; the rest were of the labouring classes of the people. Schools are opened in the Kuttra and in three other places, and about 100 Heathen and Mahometan children attend them. The converts are poor, but chiefly support themselves, the men by weaving, and the women by spinning.

Aix-la-Chapelle, t. in the grand dutchy of the Lower Rhine, between Juliers and Limburg. The French give it the name of Aix-la-Chapelle, from the circumstance of Charlemagne's having built here a chapel appropriated to a convent of nuns, and frequently resorted to it for his own devotions. It is divided into the inner and outer town. In 1807, it had 3,080 houses, 27,164 inhabitants. It was long the favourite residence of Charlemagne, and for some time the capital of his empire; hence it was long customary to hold here the coronation of the emperors of Germany. Its baths, eight in

number, issue from five springs, and are much celebrated. They are much resorted to in time of peace. This city held the second rank among the imperial towns of Westphalia. Two celebrated treaties of peace have been here concluded; one in 1668, between France and Spain, the other in 1748, between the different powers engaged in the war of the Austrian succession. It was entered by the French troops in 1794, and remained in the hands of France till the fall of Buonaparte, a period of 20 years, during which it was the capital of the dep. of the Roer, and the head of an arrondissement. It now belongs to Prussia. 25 m. N. E. Liege, 36 S. W. of Cologne. Lon. 5° 54' E. Lat. 50° 52' N.

Alabama, one of the U. S. bounded N. by Tennessee; E. by Georgia, from which it is separated in part by the Chatahoochee; S. by Florida and the gulf of Mexico; W. by the state of Mississippi. The western boundary begins on Tennessee river, at the mouth of Bear creek, and proceeds by a direct line to the N. W. corner of Washington county, and thence due south, to the Gulf of Mexico. The southern boundary here commences, and proceeds eastwardly, including all the islands within six leagues of the shore, to the Perdido river; thence, up the same, to the parallel of 31° N. lat. and thence due east, along that parallel, to the western boundary of Georgia. The area of the state is estimated at 44,000 square miles. It is divided into 24 counties. A ridge of highlands divides the waters which fall into the Tennessee on the north from those which flow into the gulf of Mexico on the south. North of this ridge is a limestone region; south of it the whole country is alluvial. The soil is generally fertile, particularly on the banks of the rivers. The country bordering on Tennessee river, for the space of 100 miles east and west, and 40 from north to south, is regarded by some as the garden of North America. Thousands of emigrants from the neighbouring states have resorted hither within a few years. Madison county, which lies in this region, 7 or 8 years ago was a mere wilderness. In 1820 it contained more than 17,000 inhabitants, and produced 15,000 bales of cotton or 4,500,000 pounds. Cotton is the staple production of the state, and the great article of export.

Alabama has been but recently settled, and the population has increased with astonishing rapidity. In 1810, there were less than 10,000 inhabitants; in 1816, 29,683; in 1818, 70,594, and in 1820, 127,901, of whom 41,879 were slaves. Engaged in agriculture, 30,642, in commerce, 452, in manufactures 1,412. The settlements at present are principally confined to the banks of the great rivers. The counties on the Tennessee contain more than one third of the whole population. The Indians formerly occupied the whole state, but their title has been almost extinguished by the government of the United States. The Cherokees, however, still own a section in the N. E. part of the state; and the Choctaws, a section in the N. W. part.

Alabama and Mississippi formed a part of Georgia till 1800, when they were separated from it, and established by act of Congress as a separate government, under the name of the Mississippi Territory. In 1817, Alabama was separated from Mississippi and became a territorial government, and on the 3d of March, 1819, was admitted into the Union as an independent state. In the act of Congress admitting Alabama into the Union, two townships of land were granted to the state, for the support of a college; and one section, or thirty-sixth part of every township, was given for the support of schools. Five per cent. of the net proceeds arising from the sale of the public lands within the state, were also appropriated to making roads and canals for the benefit of the state. A military road was lately completed, connecting Florence on the Tennessee with the city of N. Orleans, by which the distance to that city is lessened 300 miles. Cahawba is the seat of government.

In 1821, a petition was made to Congress by a convention of the state, to have annexed to Alabama that part of Florida, which lies between the rivers Apalachicola and Perdido. This tract consists of a slip of coast 50 miles wide, extending along ½ds of the state of Alabama, and includes the town of Pensacola.

Aleppo, city of Syria, capital of the above pachalic. It is on 8 small hills, intersected by Kowick r. It is in circuit $3\frac{1}{2}$ miles, and including the suburbs, 7 or 8. The city is surrounded by a wall, and has 9 gates. Near the N. E. corner is a castle on a hill, encompassed by a ditch; a bridge of 7 arches is thrown over the ditch on the S. It is a magazine for military stores. Aleppo is the 4th city of the Ottoman Empire, exceeded only by Constantinople, Cairo, and Damascus. It is well built. The streets are broader than usual in the East, are paved, and have two foot-paths raised six inches high. The houses are surrounded by terraces, on which the inhabitants sleep in summer. The seraglio or palace of the pacha is spacious, with magnificent gates. A distinct quarter of the city is allotted to Jews, and another to Europeans. The mosques are built of free stone, with a dome in the middle, covered with lead. About 20 caravanseras or inns, spacious quadrangular edifices one story high, are dispersed through the city, and coffee houses with a fountain in the middle, and a gallery for musicians. Pop. 250,000, chiefly Turks and Arabs; among them are 30,000 Christians, and 5,000 Jews. Women are not seen in the streets of Aleppo after dusk. Its manufactures are of silk and cotton; its exports, cloth from Antioch, Merdin, Orfa and Antab; osenaburghs from Aleppo and Damascus, and printed cottons from Diarbeker; also galls, different drugs, copper, and a variety of other articles. The imports from Europe are cloths, Lyonesse stuffs and bonnets after the fashion of Tunis, from France, merceries, indigo, tea, sugar, paper, soap, and a great variety of coral ornaments, 4 caravans annually proceed through Natolia to Constantinople; others arrive from Bagdad and Bassora with coffee brought from Mocha on the Red Sea, round the Persian gulph; as also muslins and shawls from India. Aleppo is healthy; but visited once in about 10 years by the plague. 70 m. S. E. Alexandretta, 234 N. Damascus. Lon. $37^{\circ} 16'$ E. Lat. $36^{\circ} 11'$ N.

Alexandria, city, ancient capital of Egypt, founded 331 A. C. by Alexander the Great. On an island opposite to the mouth of the harbour, is the pharos, or light house, one of the wonders of the ancient world. Alexandria formerly engrossed the commerce of India; goods being brought up the Red sea, landed at Bernice, carried across to the Nile, there embarked and conveyed down the river, and through a canal from its main bank, to the city. It was the centre of all sciences connected with mathematics, astronomy, and geography; those learned men only were valued who had been bred in its school. The library surpassed all others which antiquity could boast. The discovery of the Cape of Good Hope transferred the India

trade to a different channel. Alexandria is situated at the W. extremity of the Egyptian coast, on the borders of the Lybian desert, upon a neck of land, between the sea and lake Mareotis. It communicates with the Nile by a canal, which also supplies the city with water. The old town is partly inclosed with walls nearly six miles in circumference; but the ruins of the ancient city can be traced over three times that circuit. Pompey's pillar is 94 or 95 feet high, composed of 3 pieces of the finest granite, one for the pedestal, another for the shaft, and the third for the capital. The mean diameter is 7 feet 9 inches. The two obelisks, one thrown down and the other standing, vulgarly called *Cleopatra's Needles*, are each 58 feet 6 inches high, and the breadth of the base is 7 feet. They are composed each of a single block of granite, and entirely covered with hieroglyphics. The reservoirs with which ancient Alexandria was supplied with water, excavated the whole ground upon which that city stood. A conduit, from the canal of Cleopatra, extended the whole length of the city, conducting the water into the cisterns. The catacombs begin at the extremity of the old city, and extend along the coast; they consist of small sepulchral grottos cut in the rock, which is a soft calcareous substance; the interior of the galleries is plastered with mortar, difficult to break; each cavity contained three coffins piled over each other. New Alexandria is built chiefly along the coast. The population has been estimated as high as 20,000, though the settled residents may not exceed 5,000. Turks compose the officers of government and the garrison; the Copts are numerous, but held in contempt. The mercantile transactions are in the hands of the Jews. The approach from the W. is difficult, the Lybian shore being a dead flat, presenting no object perceptible at a distance. The first land-mark is two eminences, with a tower on each, called Aboukir. There are two harbors, the old and the new: the old harbor is safe, and affords a sufficient depth of water; the new is shallow, has a rocky bottom, and is exposed to the N. winds, which blow with great violence. Algiers, N. Africa, one of the Barbary states, on the Mediterranean, between Morocco and Tunis, extending S. to the Atlas mountains. It is the ancient Numidia and Mauritania Tingitania. The mountains are covered with vineyards and forests, except Jurjura, 60 miles S. E. Algiers, whose top is covered with snow during great part of the year. The largest river is Shelliff, which has a course of 300 miles; the Adjidi rolls S. into the desert, and is lost in a lake on its borders. The soil produces wheat and barley, and all the fruits and vegetables of Europe. It contains mines of lead and iron. Near the lake of Marks is a solid mountain of salt, and the lake when it dries up in summer, leaves its bed deeply incrustated with it. The salt pits near Arzew are about 6 miles in compass. The manufactures consist in silk, particularly sashes and handkerchiefs, and in carpets, and a coarse kind of linen. The exports are coral, wool, bees wax, ship timber, ostrich feathers, grain, pulse, hides, goat and sheep skins, camel's hair, cattle, sheep, of the annual value of 42,175*l*. The imports consist of European manufactures and colonial produce. Linens, muslins, and hardware are prominent articles. The towns are inhabited by Moors, Jews, and Turks, with a few Europeans; the plain country by the Arabs; and the mountains by Brebers, or Berebbers. See *Barbary*. Algiers is divided into 3 provinces: the W. or Tlemsam or Tremecen borders on Morocco; chief towns, Tlemsam and Oran: the central or Algiers proper; and the E. or Constantina; chief towns, Constantina and Bona.

Algiers, city, capital of the above country, on the Mediterranean, and on the declivity of a hill, on which the houses rise gradually in the form of an amphitheatre, and terminate nearly in a point at the summit. It is 1½ miles in circuit. The largest street is not above 12 feet wide, in which are the mansions of the opulent, the warehouses of

the principal merchants, and the markets for corn, bread, meat, fish, &c. Pop. estimated from 180,000 to 200,000. The largest buildings are the dey's palace and the seraglio, both of great magnitude with marble pillars of curious workmanship. It has 60 mosques; the finest is 60 feet by 40, three stories high, and supported by pillars of white marble, imported from Genoa; the walls are of white stone, brought from the ruins of Oran. Aqueducts convey water from the country to 150 fountains, dispersed through the city. Round the city is a wall about a league in circumference; 12 feet thick, thirty feet high towards the land side, and 40 feet towards the sea. It is strengthened by fortifications at its 5 gates. The harbor is formed by two moles, one running N. and the other N. E. and meeting at an island called the Lantern. It is 130 fathoms long, 80 broad, and 15 feet deep. The entrance is defended by a round castle and batteries of brass guns. Lon. 3° 30' E. Lat. 36° 42' N.

America, one of the four grand divisions of the globe, bounded on the E. by the Atlantic, which separates it from Europe and Africa, and on the W. by the Pacific, which separates it from Asia. Towards the N. its limits have not been discovered. Towards the S. it terminates in a point called Cape Horn. It is more than 9000 miles long, and on an average about 1500 broad, extending from lat. 56° S. to beyond lat. 70° N. and from 55° to 170° W. lon. and contains according to Hassel, 16,504,254 square miles. The population is commonly estimated at 35,000,000. America excels the old world in the size and grandeur of its mountains, lakes, and rivers. A range of mountains runs from N. to S. through the whole length of the continent, a distance of more than 11,000 miles: beginning at the southern extremity of the continent, in lat. 54° S. extending along the western coast, and terminating, it is supposed, in lat. 70° N. on the Frozen ocean. America excels the old world also in the abundance of precious metals. More than nine-tenths of all the silver in the world comes from the mines of Spanish America. In the course of three centuries it is estimated that they have yielded 316,000,000 lbs. of pure silver. This continent is divided by the isthmus of Darien, into North and South America.

North America comprehends I. British America: under which is included Nova Scotia, New-Brunswick, Lower Canada, Upper Canada, and the island of Newfoundland. II. The United States. III. The Spanish provinces of Mexico and Guatemala. There are two great ranges of mountains in N. America, the western and the eastern. The western is part of the great American range, and runs from S. to N. through Guatemala, Mexico, the United States, and British America. The part of this range which is in Mexico is called the Cordilleras of Mexico, and the part N. of Mexico, the Rocky mountains. The eastern range is wholly within the United States, and is called the Alleghany range. The principal lakes in N. America, are Ontario, Erie, Huron, Superior, Michigan, Winnipeg, and Slave Lake. The principal rivers are Mackenzie's, Nelson's, the St. Lawrence, the Mississippi, Red river, Arkansas, Missouri, Ohio, del Norte, Colorado, and Columbia.

South America comprehends, I. The Spanish provinces of New Grenada, Venezuela, Peru, Chili, and Buenos Ayres. II. Guiana, belonging to the English, Dutch, French, Spaniards, and Portuguese. III. Brazil, belonging to the Portu-

guese. IV. Patagonia, belonging to the Aborigines. The principal mountains are the Andes, which run along the whole western coast, and are a part of the great American range. The principal rivers are the Amazon, La Plata, and Orinoco.

Amstel, r. Netherlands, which runs through the city of Amsterdam, and discharges itself into the arm of Zuyder Zee called the Wye.

Amstelveen, v. Holland, 6 m. S. Amsterdam. Pop. 5,051.

Amsterdam, the largest, richest, and most populous city in the Netherlands, is on the arm of Zuyder Zee called the Y or Wye. In former ages it was a simple village, meanly built, and inhabited by fishermen. It was encompassed with walls and other fortifications in 1482, and by successive accessions in size and population (particularly in the years 1585, 1599, 1612, and 1658,) became in the 17th century, one of the first trading cities of Europe. One great cause of its rapid progress was the decay of Antwerp. The river Amstel divides it into the Old or Eastern, and the New or Western Towns. From the marshy nature of the soil, it has been necessary to build almost the whole city on oaken piles driven into the ground. It is intersected throughout by canals, which cut each other in a thousand different ways. Several streets are lined with trees, and form agreeable promenades. On the land side it is defended by a wall and regular bastions, with a broad and deep ditch; and by means of the sluices the whole adjoining country can be laid under water. Towards the sea it is provided with no fortifications; but the entrance to the harbor is guarded by two rows of piles, with openings for the admission of vessels, which are shut at night. The stadthouse stands on a foundation of 13,659 piles, in an open square in the centre of the city. It is built of freestone, (except the ground floor, which is brick,) is 282 feet long, 235 broad, and, without reckoning the tower, 116 high. Its interior is adorned with marble, jasper, statues, paintings, and other costly ornaments. Among other edifices, are the magnificent East and West India houses, exchange, bank, admiralty, three weigh-houses, corn-exchange, and tower. In the old church is a chapel, with windows of painted glass. The new church contains the tombs of De Ruyter, Bentink, and Vondel. The Jews possess splendid synagogues. The principal public establishments are the arsenal and dock-yards, the academy, grammar school, anatomical and surgical college, the work-house, house of correction or rasp-huis, orphan-house, hospital for old men, establishment for widows, lazaretto, lunatic asylum, the botanic garden, &c. The exchange, so long famous in the mercantile world, is a plain but stately fabric of freestone, covered with tiles, and is in length 230 feet, and in breadth 130. It is fitted to contain about 4,500 persons, and is daily resorted to after midday by all concerned in exchange or other mercantile business. In former days, it was not uncommon to see 100 vessels enter the port with the same tide, and there commonly lay together in the harbor 600 vessels and upwards. The objects of this commerce were grain, wine, groceries, spiceries, dye-stuffs, fish, Virginian and Brazil tobacco, all Baltic merchandise, cotton, and other productions from the Levant and Barbary; the products of Italy, Spain, France, and the north of Europe; gold, silvery, jewellery, and all kinds of colonial produce. In the town and adjoining country are manufactured all sorts of stuffs, damasks, galoon lace, velvet, woollen cloths, carpets, and leather; there are also refineries of sugar, borax, camphire, cinnabar, sulphur, &c. Its commerce declined during the 20 years that preceded the general pacification of 1814. The immediate causes were the war with England in 1780, the interior troubles in 1787, and above all,

the occupation of the country by the French, the consequent war with England, and loss of the Dutch colonies. It is doubtful if this city will ever regain its former population and opulence, now that the Scheldt is open, and Antwerp in the enjoyment of that good government and wise regulations which formerly were found only in Holland. The population in 1785 was 230,000, but in 1812 below 200,000. It is 5 m. W. of the Zuyder Zee, 65 N. Antwerp, and 240 N. by E. Paris. Lon. 4° 40' E. Lat. 52° 25' N.

Andes, called by the Spaniards Cordillera de los Andes, an immense chain of mountains which,

under various names, runs through the whole continent of America. They commence near the straits of Magellan in lat. 54° S. and passing along the coast of the Pacific ocean, through Patagonia, Chili, Peru, and New Granada, cross the isthmus of Darien into North America, where still pursuing a northerly course, they pass through Guatemala, New Spain, the United States, and British America, and terminate, it is supposed, on the Frozen ocean, in lat. 70° N. In Chili they are about 120 miles in breadth. Various branches diverge from the main chain, in La Paz, Potosi, and Tucuman, to the E. connecting the Andes of Peru and Chili with the ridges of Brazil. In Peru the Andes are divided into three ridges, and about the 6th degree of S. lat. are united into a single chain. They again divide, on entering Quito, into two chains, and farther N. from 2° to 5° N. lat. into three. The E. ridge divides the valley of the river Magdalena from the plains of Rio Meta. The central chain, which divides the waters of the Rio Magdalena from those of Rio Cauca, often attains the limits of perpetual snow. The W. separates the valley of Cauca from the coast of the Pacific ocean. Its highest elevation is scarcely 5,000 feet, and it sinks so low in its progress N. that its course can scarcely be traced into the isthmus of Darien. The three chains are blended together in the 6th and 7th degrees of N. lat. After passing the isthmus of Darien, the Andes in Mexico are spread into vast plains, from 6,000 to 8,000 feet above the level of the sea, from which insulated mountains, with volcanic summits, covered with perpetual snow, rise to the height of 15,000, 16,000, and 17,000 feet. Several of the most elevated peaks of the Andes have been scaled, and their heights accurately measured, by Humboldt and M. Bonpland. According to the observations of these travellers, who ascended to the height of 19,300 feet, Chimborazo rose 2,140 feet higher, making its total height to be 21,440 feet above the level of the sea. The volcano of Antisano was found to be 19,150 feet high, and that of Cotopaxi only 260 feet lower. The Andes in the tropical regions, from their elevation, comprehend within a short space, every variety of temperature, and of the vegetable tribes. On the declivity, from about 3,000 to 5,000 feet above the level of the sea, there reigns perpetually a soft spring temperature, which never varies more than 7 or 9 degrees of Fahrenheit. The limit of perpetual congelation under the equator has been fixed, by Humboldt, at 15,700 feet, and at 15,000 feet in the latitude of 20°. Between the tropics, from the level of the sea to the height of from 3,000 to 5,000 feet, cassava, cacao, maize, plantains, indigo, sugar, cotton, and coffee, are cultivated. Between the altitudes of 6,000 and 9,000 feet lies the climate best suited for the culture of all kinds of European grain. Beyond the limit of 9,000 feet large trees begin to disappear. The grasses clothe the ground at an elevation of from 13,500 to 15,100 feet, and from this to the regions of ice and snow, the only plant is the lichen, which covers the rocks, and seems even to penetrate under the snow. The name *Andes*, is commonly applied only to that part of the chain which is in South America. The part in Mexico is called the *Cordilleras of Mexico*, and the part N. of Mexico, the *Rocky Mountains*.

Andover, p-t. Essex co. Mass. 20 m. N. Boston; 16 W. N. W. Salem; 20 S. W. Newburyport. Pop. 3,889. Phillips' Academy in this town is the most flourishing academy in the State. It was founded in 1778 by the Hon. Samuel Phillips, Esq. of Andover, and his brother, the Hon. John Phillips, LL. D. of Exeter. Its officers are a principal, 3 assistants, a teacher of sacred music and a writing master. The number of students in 1822 was 130, all of whom were pursuing the study of the learned languages. The institution is accommodated with a large and commodious brick building, 80 feet by 40, erected in 1818, on a range with the buildings of the Theological Seminary. The Theological Seminary was founded in 1808, and has been richly endowed entirely by private bounty. The whole amount of what has been contributed for permanent use in this seminary, including the permanent funds, library and public buildings, is more than *three hundred and fifty thousand dollars*, and this has been contributed almost entirely from six families. In 1822 the officers were 4 professors, and the number of students was 132. The whole number who have completed their education here is 312. The library contains about 5,000 volumes. The buildings are on a lofty eminence, and command an extensive prospect. They consist of an elegant brick edifice, containing the chapel, library and lecture rooms; 2 spacious brick edifices, containing rooms for the accommodation of 128 students; and houses for each of the professors and the steward. A majority of the students are supported in whole or in part by charity. The Academy and the Theological Seminary are under the same Board of Trustees.

Antwerp, city, Netherlands, in Brabant, on the Scheldt. Its citadel is on the S. side of the town. Its harbor is deep and commodious, capable of containing 1,000 vessels. Antwerp was formerly the

greatest place of trade in Europe, and had a numerous population, but the policy of the Dutch closed up the navigation of the Scheldt, and turned the trade to Amsterdam. These two cities are now, however, under the same government, and the navigation of the river being open, the commerce of Antwerp has begun to revive. It has an elegant cathedral church, stadthouse, and exchange; and a vast warehouse for Baltic merchandise. In the parish church of St. James are deposited the remains of Rubens. The inhabitants are employed in jewellery, sugar-refining, and linen-bleaching, and in the manufacturing of cotton, lace, and carpets. Antwerp has repeatedly experienced the calamities of war. In 1578 it was plundered by the Spaniards; surrendered to the duke of Marlborough in 1706; the French took it in 1746, restored it to Austria at the peace of Aix-la-Chapelle; re-occupied it in 1794, and retained it during the next twenty years. 22 m. Arabia, an extensive country in the S. W. of Asia, bounded S. by the Indian ocean, W. by the Red sea, E. by the gulf of Persia, and N. by Syria and the river Euphrates. Lon. 33° to 58° E. Lat. 12° to 34° N. Length from the N. E. extremity on this river to Cape Babelmandel, 1,500 miles. Breadth on the southern coast, from the mouth of the Red sea to the Persian gulf, 1,200 miles; between Bassorah and Suez, 900. Square miles 1,030,000. Pop. estimated at 10 or 12,000,000. The whole interior is an immense desert of burning sands, interspersed with some few fertile spots, which appear like islands in a desolate ocean. A hot and pestiferous wind called the *Simoon*, frequently blows over the desert, and instantly suffocates the unwary traveller; and whole caravans are sometimes buried by moving clouds of sand raised by the wind. The edges of the country on the sea coast contain some flourishing provinces and settlements; but in all parts they suffer for want of water, there being no river of any consequence in all Arabia, and no rain for months, and sometimes a year, together. Arabia is commonly divided into three parts: *Arabia Felix*, or happy Arabia, bordering on the Persian gulf, the Indian ocean and the southern part of the Red sea; *Arabia Petraea*, or Stony Arabia, lying on the Red sea north of Arabia Felix; and *Arabia Deserta*, or the Desert, including all the interior and northern parts of the country. Among the Arabians these names are not known: that which the Arabian Deserta, they call *Nedsjed*; *Aramunated* *Hedjas*; and Arabia the kingdoms of Yemen, Om- the towns are near the coast, sea, the birth-place of Ma- contains the tomb of Ma- a, *Sana*, and *Mascat*. The one of the most extensively d. It is spoken not only in Persia, Tartary, part of In- f Africa, all the sea coast Turkey. The religion Arabs of the desert are a roving, lawless race no country in troops on ravelers and caravans; ole qualities. They are a, and if a Bedouin Arab and salt with a guest, he old betray him. Arabia is an petty chiefs called imams, t of whom are elected by the sult them in all important

transactions. The Arabs are a people of great spirit and valor, and resolute in defence of their liberty. They alone of all Asiatic nations have never been subdued. The most remarkable animal is the camel, which is wonderfully fitted by Providence for traversing the hot and parched desert. He can travel 6 or 8 days without water, and usually carries 800 pounds upon his back, which is not taken off during his journey. When weary he kneels down to rest, and sleeps with his load upon his back. His feet are made of a hard fleshy substance, well fitted to resist the heat of the sands.—The Arabian horses are the best in the world. They are swift yet docile, and will live whole days without food, and bear incredible fatigue. The inland trade of Arabia as well as of Persia, Turkey, Tartary, and Africa, is carried on principally by caravans, consisting of large companies of merchants, travellers and pilgrims, who march with their camels over the sandy deserts. They carry their provisions and drink with them. Their water is carried in skins by the camels. They go armed, and travel in company to defend themselves from the wandering Arabs.

Arkansas, a territory of the U. S. bounded N. by the State and Territory of Missouri, E. by the Mississippi, S. by Louisiana and by Red river, which separates it from the Spanish dominions, and W. by the Spanish dominions. The northern boundary commences on the Mississippi in 36° N. lat. and proceeds due west to the St. Francis, thence up that river to 36° 30' N. lat. thence west to the U. S. boundary. The Arkansas river runs through the whole length of the territory from W. to E. North of this are the St. Francis and White rivers ; in the south are the sources of the Wachita ; and in the S. W. is the Kiamesha, a large branch of Red river. The face of the country for about 150 miles W. from the Mississippi is in general level, consisting of bottom lands on the rivers, bordered by thinly timbered hills, back of which are vast prairies. There are some exceptions, particularly a fine district of upland between the St. Francis and White rivers. Beyond the level tract, the country rises into hills and ranges of lofty mountains, among which are the Mamelle, the Petit John, the Casse-tete, and the Mazern. A branch of the Mazern range divides the Kiamesha from the waters of the Arkansas. The climate in the level country is moist ; vegetation begins in the latter part of February, and heavy rains fall during the summer months. In the western part of the territory the climate is more dry, and the rains are slighter and less frequent. The soil of Arkansas is fitted for a great variety of productions. The alluvial lands produce wheat, oats, flax, hemp, cotton, rice, and tobacco : the richest yield from 60 to 80 bushels of wheat the acre ; the prairies are clothed with tall grass, and afford excellent range for cattle ; the uplands in the eastern part of the territory are poor, but above the Poteau river, they are excellent grazing lands. The lands on White river are the best in the territory, and among the best in America : on the Wachita the land is poor and stoney. The country is still for the most part unsubdued, and wild animals abound. The buffalo, bison, elk and deer feed in herds on the prairies. Among the other animals are the bear, the ~~blower~~ and raccoon. Iron ore, lead and zinc are found on White river. Stone coal, sulphur, saltpetre, and salt are found in abundance. The salt occurs principally in the Salines, a tract about 100 miles wide, extending through the whole breadth of the territory from S. to N. at the distance of 700 miles from the Mississippi. Here is the salt prairie which is covered for many miles with pure white chrySTALLIZED salt from four to six inches deep. In this tract is also an extensive body of gypsum. In the south are the famous hot springs of Wachita.

This country was obtained from the Quapaws Indians in 1819. A large reservation is left for the Quapaws, extending along the southern bank of the Arkansas from the town of Arkansas to Little Rock, and thence south to the Wachita. The Osages of the Arkansas occupy the country on Grand river, a northern branch of the Arkansas. The United Foreign Mission Society have a mission established among these Indians at Union. In 1818 and 1819, about 5,000 of the Cherokee Indians removed from their residence east of the Mississippi to a fine tract of country on the north bank of the Arkansas, between 94° and 95° W. lon. Here the American Board of Missions have established a missionary station at a place called Dwight.

The population of the territory in 1810 was

1,062; and in 1820, (exclusive of Indians and hunters) 14,273, of whom 1,617 were slaves; engaged in agriculture 3,613, in commerce 77, in manufactures 179. The hunter population is composed of persons from various sections of the United States, who have either embraced hunting from an excessive fondness for the pursuit, or have fled from civilized society to escape the severity of the laws and indulge in unrestrained passion. They subsist almost entirely by the chase and differ very little in any respects from the savages. They live chiefly on White river, the Arkansas and Red river. Their number is estimated at 1,000 or 1,500.

This territory is divided into 5 counties: Arkansas, Clark, Hempstead, Lawrence and Miller. The seat of government is established at Little Rock. The United States have a garrison at Fort Smith.

Arkansas, r. N. America, which rises in the Rocky mountains in about lat. 41° N. and pursuing a southeasterly course, joins the Mississippi 400 miles above the mouth of Red river. It forms for some distance the boundary between the United States and the Spanish possessions, it then flows for a short distance in the territory of Missouri, and enters Arkansas near the N. W. corner; after which its course lies wholly in that territory. The upper part of its course is through a mountainous and hilly country, and the channel is comparatively straight. At Little Rock it leaves the hilly country, though for 70 miles below, pine bluffs occasionally occur on its borders. It then enters the alluvial tract and winds its way in continual bends to the Mississippi. These bends are often worn away by the stream cutting for itself a shorter passage through them, and leaving in the old channels stagnant waters, called lagoons. About 15 miles above its mouth it is connected with White river by a natural bayou 8 or 9 miles long; boats entering the Arkansas from up the Mississippi usually ascend the White river 7 miles, and then proceed through this bayou; other bayous connect Arkansas river directly with the Mississippi, forming a delta, but they are dry at low water. The country on its banks is subject to inundations, which prevent settlements below the town of Arkansas. The inundations usually take place from February to May, earlier than those of the Mississippi and Missouri rivers, and are therefore less injurious to the crops. The whole length of the river is more than 2,000 miles. It has a few slight rapids and shoals, but not such as to prevent its navigation quite to its source. Steam-boats have ascended to Fort Smith, 500 miles from the Mississippi, and might, it is said, ascend as much farther. Its principal tributaries are Grand or Sixth Bull, and Verdigris rivers from the north, and the La Feve, Petit John, Poteau and Canadian from the south.

Arkansas, or *Osark*, p-t. and cap. Arkansas co. in Arkansas territory, is situated on an elevated bluff on the north bank of the Arkansas river, about 20 miles in a direct line, and 60 by water from the Mississippi, being the first spot in ascending the river that is secure from inundation. It is a scattered settlement of about 40 houses, and was formed by the French more than a century ago. Most of the inhabitants are now of mixed blood, descendants of French and Indians. Pop. 726.

Armenass, v. Syria, where the glass used in Aleppo is manufactured. 35 m. W. Aleppo.

Armeni, t. Mingrelia, 30 m. S. E. Isgaur.

Armenia, country, Asia, bounded N. by Georgia and Mingrelia, E. by Azerbaijan in Persia, S. by Diarbekir, and W. by the Euphrates. It is mountainous, and, owing to its height above the level of the sea, is of a colder temperature than might have been expected from its geographical position. Wheat and barley, cotton, hemp, tobacco, and raw silk, are cultivated. The Armenians form the chief class of traders in the Persian empire; inhabit a large portion of Asiatic Turkey, and are found in other parts of the world. They engage in the most extensive commercial undertakings, and bear a high character for integrity in their dealings. They are a distinct race of people, seldom intermarrying with other tribes, and professing a peculiar religion, the basis of which is Christianity. The western parts are subject to the Turks, the eastern to the Persians, and the southern are ruled by numerous independent chiefs.

Asi, r. Italy, in the States of the Church, falls into the Tiber, near Orrieto.

Asia, one of the 5 divisions of the earth, connected on the W. with Europe and Africa, but separated from America on the E. by Behring's straits. It is bounded on the N. by the Arctic or Frozen ocean; E. by the Pacific ocean; S. by the Indian ocean; and W. by Africa, the Mediterranean sea and Europe. It extends from 2° to $77^{\circ} N.$ lat. and from 26° to $190^{\circ} E.$ lon. The area is estimated by Hassel at 16,728,000 square miles.

It contains the following countries: Turkey in Asia, Russia in Asia, Arabia, Persia, Cabul including Beloochistan, Hindoostan or Hither India, Farther India, Chinese empire, Japan, and the Asiatic islands.

Asia extends through all the zones and has every gradation of climate from the cold of the Polar regions to the burning heat of the equator. It presents also every variety of surface, mountains whose tops are lost in the clouds, vast deserts, and regions of the most exuberant fertility.

The principal ranges of mountains are the Altay, which in length is inferior only to the great American range, and the Himmaleh range, which is the loftiest on the globe. The principal rivers are the Oby, the Enicei, and the Lena, which flow into the Frozen ocean; the Amour, the Hoang-Ho, Kian-Ku, and Japanese, which flow into the Pacific; and the Ganges, Indus and Euphrates, which run into the Indian ocean.

The prevailing religions are Paganism and Mahometanism. The principal languages are the Arabic, Persian, and Chinese. The population is variously estimated from 250,000,000, to 600,000,000. Hassel makes it 380,000,000. The Asiatic governments are mostly despotic monarchies.

Asia Minor, the most western portion of the great country of Asia, bounded N. by the Black

Sea; E. by the Euphrates; W. by the Mediterranean, the sea of Marmora, and the straits of the Hellespont and Bosphorus. The whole country is under the Turkish government, and it is divided into several provinces, of which Natolia and Carmania are the most important.

Astracan, or *Astrakhan*, province of Asiatic Russia, bordering on the Volga, the Ural, and the Caspian sea. Sq. miles 69,000. Pop. 383,000.

Astracan, cap. of the above province, on an island in the Volga, about 52 miles from its mouth. It is three miles in circumference, of very irregular figure, and surrounded by a wall. There are 25 Russian churches and 2 convents; likewise a church for Roman Catholics; the Armenians also have a metropolitan church. Peter the Great designed to make this place a great mart for the produce of the world, and its situation is well calculated for such a design, being connected by the Volga and a canal with the Baltic and north of Europe; by the Caspian with Persia, and the south of Asia, and being near the Black sea, through which is a communication with Africa and the south of Europe. The population consists of a mixture of Russians, Armenians, Greeks, Tartars, Persians, Jews, Indians, English and French. The Tartars and Armenians are said to be the most numerous; and the total population is estimated at 70,000. There are said to be 50 manufactories of silk in the city, all in the hands of the Armenians; extensive salt works are also carried on, and manufactures of gunpowder. Among the exports may be enumerated fish, pig

and bar iron, about 40,000 pounds of cochineal annually, and some indigo; woollen and linen cloths, Russia leather, brocades, taffetas, satin, and foreign velvets. The imports are raw and spun cotton, and stuffs of the same material; raw and manufactured silk, shawls from Thibet and Cashmere, and some furs. There is a considerable trade in jewels; oriental turquoises are sold in great number by the Astracan merchants, and the Indians deal in rubies and emeralds. The chief traffic with Persia is carried on by Armenians. It has suffered from conflagrations, owing to the combustible materials of which it is composed; but of late years an increased degree of attention has been paid both to its safety and to its embellishment. It is a station of the Scotch missionary society; for which its position is remarkably well fitted, being frequented by merchants from every nation between the Indus and the Black sea: by means of whom, copies of the Bible, books, and tracts are sent to Bagdad, Persia, Bucharia, and even to China. It contains prosperous schools, and a printing press, from which were issued in a single year, more than 15,000 copies of portions of the Bible. 330 m. S. S. E. Saratov, 1,040 S. S. E. Petersburg. Asturia, or *Asturias*, a principality in the north of Spain, which forms an unequal parallelogram. Including Montanas, it is bounded N. by the bay of Biscay, E. by the province of Biscay, S. E. by Old Castile, S. by Leon, and W. by Galicia. It is commonly divided into Asturia d'Oviedo, and Asturia de Santillana, so called from their chief towns: Asturia de Santillana is sometimes called Las Montanas. The whole principality is colder than the rest of Spain, owing to its lofty and steep mountains. The hills are covered with excellent pastures, and a great variety of fruit trees. The most important occupation is the breeding of cattle, the horses being particularly noted for their strength. In the interior are found lead, copper, iron, magnesia, arsenic, cobalt, lapis lazuli, alum, rock-crystal, and different kinds of marble. A considerable trade is carried on in mules and salted fish; the principal seaport is Gijon. Square miles, 3,725. Pop. 348,000.

Athens, (now called *Setines*), anciently the capital of Attica, and the birth place of the most distinguished orators, philosophers, and generals of antiquity, is now an insignificant town in the Turkish province of Livadia. It stands on the rivulets of Ilissus and Cephissus, a few miles from the western shore of Attica, 100 m. N. E. Misitra (Sparta,) and above 300 S. W. Constantinople. There are still, in the public edifices of this city, ample testimony of its former grandeur. The relics of art seem here indeed to have been watched over by a particular providence; for while the ruins of Delphos, Delos, Olympia, Argos, Sparta, and Corinth disappoint the traveller by their insignificance, those of Athens remain, for the most part, in a state little inferior to their original splendour. The hard and stony soil on which the principal part of the city was built, has prevented any considerable sinking of the temples and other great monuments in a lapse of more than 2000 years. Add to this that a dry atmosphere has protected the stone from corrosion, and preserved to the work of the architect and statuary all their original gloss and polish. The modern town is a small open place, with narrow and crooked streets. The houses are mostly mean and straggling. The

population is from 8,000 to 10,000, of whom one fourth are Turks, and the remainder Greeks. Lon. $23^{\circ} 53'$ E. Lat. $38^{\circ} 2'$ N.

Athens, p-t. Clarke co. Geo. on the main road from Augusta to Nashville in Tennessee, 94 miles from the former, and about 300 from the latter. It contains about 45 families, beside many respectable visitants who resort here to spend the sultry months. The university of Georgia, established in 1801, is located here. It is under the direction of 17 trustees, and its officers are a president, professor of mathematics and astronomy, professor of chemistry and natural philosophy, professor of languages, and three tutors. The buildings are a large three story brick edifice, 120 feet long and 45 wide, containing 24 rooms for students; a large steward's hall; a chapel 55 by 44 feet; and a two-story brick building containing the chemical laboratory, the library of between 1,000 and 2,000 volumes, and the philosophical apparatus. In 1821, the Legislature of Georgia granted \$25,000, for the erection of an additional edifice, which is already begun, and is to be four stories high, 120 feet by forty-five. The funds of the University consist of \$100,000 in the Bank of the State, several tracts of land yet unsold, beside the monies arising from tuition, and are estimated in the whole to be productive of \$11,000 per annum. The number of students in 1822, was 119. There is also an Academy under the superintendence of the trustees and president of the University. The instructors of the academy are paid out of the funds of the University, and the pupils receive their tuition gratis.

Australia del Espiritu Santo. See *Hebrides*, *New*.

Austria, circle of, the largest of the ten circles into which the empire of Germany was divided. It was bounded N. by Bohemia and Moravia; E.

by Hungary; S. by the gulf of Venice and Italy; and W. by Switzerland and Bavaria. These limits include all the present dominions of Austria in Germany, except Bohemia, Moravia and Austrian Silesia. This country is now divided into four parts, in reference to their administration, by the chancery at Vienna: viz. Lower, Inner, and Upper Austria, and the kingdom of Illyria.

Lower Austria, is divided into the country below the Ena, and the country above the Ena. The country below the Ena is subdivided into four quarters, viz. 1. the quarter below the forest of Vienna; 2. the quarter above the forest of Vienna; 3. the quarter below the Mannhartberg; 4. the quarter above the Mannhartberg. The country above the Ena is subdivided into five quarters: 1. the Hausruck quarter, or Hausruck-viertel; 2. Mühl-viertel; 3. Traun-viertel; 4. Inn-viertel; 5. Salzburg-viertel. Lower Austria contains 1,832,405 inhabitants, of which the part below the Ena contains 1,032,729, and the part above the Ena 799,676.

Inner Austria, in the modern division of the Austrian empire, corresponds with what was formerly the duchy of Stiria. It is divided into 5 circles, which are named after the principal towns: Judenburg, Bruck, Gratz, Marburg, and Cilly. It contains 763,830 inhabitants.

Upper Austria, includes the Tyrol, and several smaller territories. It is divided into 7 circles, which are named after the chief towns: Schwart, Imst, Bregenz, Botzen, Bruneck, Trient, and Roveredo.

For the subdivisions of the kingdom of Illyria, see *Illyria*.

Austria, Archduchy of, corresponds nearly with Lower Austria, mentioned in the preceding article.

Austria, Empire of, comprehends not only the countries described in the two preceding articles, but all the various states under the dominion of the imperial house of Austria. It is bounded N. by Saxony, Prussia, and Russian Poland; E. by Russia and Turkey; S. by Turkey, the Gulf of Venice, and Middle Italy; W. by Piedmont, Switzerland, and Bavaria. This empire is comparatively of modern origin, and, at different periods, has received various important augmentations. It is a combination of nations, varying in their origin, languages, religions, and modes of life, yet forming at the present day, a firm and compact body politic. The size and population of this great monarchy will be best exhibited by the following view of its component parts.

TABLE OF THE EXTENT AND POPULATION OF THE AUSTRIAN EMPIRE.

14. Slavonia,	
15. Dalmatia,	
Total in round numbers,	270,000 28,000,000

The seven countries first named in the above table, constitute the German part of the Austrian empire. The governments of Milan and Venice are the Italian parts, and form what is called the Lombardo-Venetian kingdom. Galicia was taken from Poland, and bears the title of kingdom of Galicia.

The population is composed principally of four great races, in the following order: Slavonians, 11,750,000, Germans 5,000,000, Italians 5,000,000, Hungarians 4,300,000. There are besides, 1,400,000 Wallachians, 480,000 Jews, and a few Armenians. This population occupy 758 cities, 2,000 market towns, 67,844 villages, and 4,192,834 houses.

The annual revenue is estimated at about 80,000,000 dollars. The public debt before the French revolution, was \$80,000,000; in 1805, more than \$350,000,000; and now more than \$650,000,000. The army on the peace establishment consists of 220,000 infantry, 36,000 cavalry, with about 15,000 artillery. For the protection of trade, a few frigates and other armed vessels are kept up on the Adriatic; while on the Danube, towards the Turkish frontier, are stationed the vessels called *tchekiken*, manned by about 1,000 soldiers and seamen.

The government is an absolute monarchy. In Hungary, however, the nation shares the legislative, and even the executive power with the emperor; the Tyrolese possess, to a certain degree, the same privileges. Austrian Italy was erected into a kingdom by an edict of the emperor in 1815, and though inseparable from the Austrian empire, it has a separate constitution, at the head of which is a prince of the imperial family, with the title of Viceroy. Galicia bears the title of kingdom, and is governed by a Viceroy; and in 1817 a liberal constitution was published, and a representative government established. Bohemia and Moravia have each an assembly of states or representatives, but their power is merely nominal. The administration of the whole empire centres in Vienna, and is composed of a number of boards, under the name of councils, chanceries, and conferences. In the German diet or 'confederation of the sovereigns and free towns of Germany,' formed in 1815, Austria presides, and has one vote. In the general assembly, she has four votes.

The established religion is the Roman Catholic; but in Hungary, Transylvania, and Slavonia, members of the Protestant and Greek churches have long been settled, and in the enjoyment of considerable privileges. In fact, since the days of Joseph II. free toleration is granted to all sects throughout the Austrian dominions. The number of the various sects is estimated as follows:—22,000,000 Roman Catholics, 2,500,000 Greek Christians, 2,000,000 Reformed, 1,450,000 Lutherans, 420,000 Jews, and 42,000 Unitarians.

In point of literature, Austria is greatly behind the north of Germany. The principal universities are at Vienna, Prague, Freyburg, Innspruck, Lemberg, Pest, and Padua.

The principal manufactures are thread, cotton, linen, lace, silk stuffs, stockings, spirituous liquors, wrought iron, steel, and brass, kitchen and farming utensils, glass, porcelain, and earthen ware. The foreign commerce is in a great measure in the hands of Greek merchants. The imports consist principally of raw materials, such as wool, cotton, raw silk, rice, oil, drugs, spices, of all which a great part comes from the Levant.

Azores, or *Western Islands*, in the Atlantic, be-

tween 37° and 40° N. lat. and 25° and 32° W. lon. consisting of St. Michael, St. Mary, Tercera, Graciosa, St. George, Pico, Fayal, Corvo and Flores. They have been at different times laid waste by earthquakes, of which the most formidable on record is that of 1591, which continued 12 days, and destroyed entirely the flourishing town of Villa Franca. Another phenomenon still more extraordinary is that of new rocks which have emerged from the ocean. The effect of subterraneous fires is also visible in numerous hot springs. The soil is exceedingly fertile in vines, oranges, and other fruits; and considerable wine is exported. The best vines are raised on the lofty sides of Mont Pico, on the island of the same name. These islands belong to the Portuguese, and the population estimated at 160,000, is almost entirely of Portuguese origin. Angra, the capital of Tercera, is the seat of government.

It issues from the lake at the southern extremity, and pursuing a semicircular course, turns gradually to the north, and flows in this direction through Sennar till in lat. 16° N. it unites with the Bahr el Abiad, or principal branch of the Nile. In Abyssinia and in Europe, the Azrek was always considered as the head of the Nile, but the superior magnitude of the Abiad seems now to be clearly proved. The principal tributaries of the Azrek are the Dender and the Maleg.

Babylon, (in ancient geography,) a famous city on the Euphrates. It stood on both sides of the river, in the form of a square, encompassed by a wall 60 miles in circuit, 87 feet thick and 350 high, on which were built 316 towers, or according to others, 250. There were 100 gates, 25 on each side, all of solid brass. From these ran 25 streets crossing one another at right angles, each 150 feet wide, and 15 miles in length. Thus the whole city was divided into 676 squares. The wall of Babylon was accounted one of the seven wonders of the world. Extensive ruins are now to be seen of this once magnificent city, about 50 m. S. Bagdad.

Baku, or *Badku*, t. and principality, Persia, in Shirvan, on the peninsula of Absharon, in the Caspian sea. It has the best harbor in the Caspian. It exports cotton, fruit, opium, rice, silk, wine, rock salt, and naptha. Its principal trade is with Astracan. Petroleum is obtained in vast abundance from wells about 8 miles from the town. They seem almost inexhaustible, some of them yielding 1000 or 1500 pounds daily. They are often dried up; but the naptha generally reappears after an interval of a few months. This substance is used by the natives as a substitute for lamp oil. All around Baku the country is deeply impregnated with inflammable matter, both above and under the surface. The earth seems overspread with fire. The city and principality were formerly much resorted to by the Guebres, or fire worshippers. They had temples built of stone, in one of which a blue lambent flame issued from a large hollow cane near the altar; and this the devotees of that sect believed would subsist as long as the world remained. Baltic Port, or *Rogerswick*, s-p. Russia, in Revel, on Roog island, at the influx of the Padis into the Baltic, 38 m. W. Revel, 150 N. Riga.

Baltic Sea, a well known inland sea in the north-west of Europe. It begins at the Danish islands of Zealand and Funen, and is formed by the coasts of Denmark, Germany, Prussia, Russia, and Sweden. It extends beyond $65^{\circ} N.$ lat. being above 600 miles in length, and varying from 75 to 160 in breadth. Its surface contains about 120,000 square miles. The flatness of the Prussian shore, with the ruggedness of that of Sweden, and above all, the sudden changes in the state of the winds, and the violent storms, render this sea very dangerous for navigators. It is frozen for about three months every year, so as to prevent navigation altogether; in the south, the melting of the ice takes place in April; but in the gulfs of Bothnia and Finland, it is seldom dissolved till the end of May. There are three passages from the Cattegat into the Baltic—the Sound, the Great Belt, and the Little Belt; of these, the most frequented is the Sound. At each a toll is paid for the purpose of maintaining light-houses. The number of vessels which passed the Sound in 1816, was 8,871.

Baltimore, city, and port of entry, Baltimore co. Maryland, is on the N. side of Patapsco river, 14 miles from its entrance into Chesapeake bay; 38 m. N. E. Washington, 100 S. W. Philadelphia, 190 S. W. New York, 400 S. W. Boston, 160 N. E. Richmond, 230 E. S. E. Pittsburg, 590 N. N. E. Charleston. Lon. $76^{\circ} 36' W.$ Lat. $39^{\circ} 17' N.$ Pop. of the city and precincts, in 1790, 13,503; in 1800, 26,514; in 1810, 46,555; and in 1820, 62,738, of whom 3,966 were slaves.

Baltimore is well situated for commerce. It is connected by good turnpike roads with various

parts of Pennsylvania, and with the navigable waters which run into the Ohio. It possesses the trade of Maryland, and of a great portion of the back country of Pennsylvania, and the western States. In amount of shipping, it is the third city in the Union. The number of tons in 1815 was 101,960. The exports in 1811 amounted to more than \$4,000,000. The growth of the city has been remarkably rapid. In 1790, the amount of shipping was only 13,564 tons, and the population in 1770, was only 300.

The city is built around a bay, which sets up from the north side of the Patapsco, and affords a spacious and convenient harbor. The strait which connects the bay with the river is very narrow, scarcely a pistol shot across, and is well defended by Fort M'Henry. A small river, called Jones' Falls, empties into the north side of the harbor, and divides the city into two parts, called the town and Fell's point, which are connected by bridges. At Fell's point, the water is deep enough for vessels of 500 or 600 tons, but none larger than 200 tons can go up to the town.

Baltimore contains the State penitentiary; the city and county alms-house; a court-house; a museum; a theatre; a custom-house; a hospital, in which there is a fine collection of anatomical preparations in wax; an exchange, an immense edifice recently erected; 3 market-houses; 10 banks, 31 houses of public worship, 5 for Roman Catholics, 5 for Episcopalians, 5 for Methodists, 3 for Baptists, 2 for Presbyterians, 2 for Dutch Reformed, 2 for Seceders, 2 for Friends, 1 for Lutherans, 1 for Independents, 1 for Dunkers, 1 for Unitarians, and 1 for Swedenborgians.

A marble monument to the memory of General Washington has been recently erected, on an elevation at the north end of Charles-street. The base is 50 feet square, and 23 feet high, on which is another square of about half the extent and elevation. On this is a lofty column, 20 feet in diameter at the base, and 14 at the top. On the summit of this column, 163 feet from the ground, the statue of Washington is to be placed.

The Battle Monument, erected to the memory of those who fell in bravely defending their city from the attack of the British on the 12th and 13th of Sept. 1814, is a handsome structure of stone, situated on a large square in North Calvert-street. The names of the persons are to be inscribed on the column.

The city is generally well built. The houses are chiefly of brick; many of them are handsome, and some splendid. The principal street is Market or Baltimore street, 86 feet wide. It runs nearly east and west, parallel with the harbor, and is intersected by others at right angles. Baltimore is supplied with water taken from the Jones' falls, and conveyed to reservoirs, whence it is distributed to every part of the city. North and East of the city, the land rises to a considerable elevation, from which there is a noble view of the city and harbor.

There are several literary institutions in this city. A Medical College was founded in 1807. In 1812 the institution was enlarged, and received a new charter. It is now styled the University of Maryland, and embraces the departments of languages, arts, sciences, medicine, law, and divinity. The medical department has 6 Professors, and is in a very flourishing state. The professors in the other departments are merely nominal. The buildings

have accommodations for 500 students. St. Mary's College has a valuable library, a chemical and philosophical apparatus, and about 150 students. Baltimore college has 2 instructors, and about 60 students.

Banda Islands, a group of islands, about 130 m. E. S. E. Amboyna. They are ten in number; and covered with rich black soil. None of them are large. Pop. 5,763, of whom only 119 are Europeans. Lantoir is only 8 miles long, by 2½ broad, and Neira, the next in importance, 2½ miles long, by ¼ of a mile broad. The chief produce of the Banda islands is nutmeg, for the cultivation of which Neira, Lantoir, Pulo Ay, and Pulo Rondo, are laid out in parks or plantations. Each tree produces about ten pounds yearly. The total quantity produced in the four islands, was formerly estimated at 350,000 pounds of nutmeg annually, and 100,000 pounds of mace. The cultivation is only allowed in four of the islands. In all the others, care is taken to extirpate the tree; and in those islands where the nutmeg is cultivated, the trade is held under a strict monopoly. These islands draw a large portion of their provisions from Batavia. The Dutch were the first European occupiers of the Banda islands; but in 1796 the British took possession of them without

resistance. They were restored in 1801; again captured in 1810, and again restored at the general peace of 1814. To the Banda archipelago belong 7 islands to the S. W. the chief of which is Kissar. These contain (except the Aarou islands) 36,266 inhabitants. Lon. 130° E. Lat. 4° 30' S.

Barbary, or the *Barbary States*, an extensive country lying along the northern coast of Africa, bounded N. by the Mediterranean, S. by the Sahara or Great Desert, and W. by the Atlantic. It is intersected through nearly its whole extent by the celebrated Atlas range of mountains, which run parallel with the coast. Between this chain and the sea is a valley, from 50 to 200 miles broad, which constitutes the cultivated land of Barbary. This tract is well watered, and exhibits an exuberant fertility, producing wheat, olives, almonds, and delicious fruits. The tract between the Atlas range and the desert is to a great extent sandy and barren, but produces dates in such abundance, that it is called Biledulgerid, or the country of dates. The climate of Barbary is temperate and pleasant. The plague, however, occasionally visits it, and leprosy is very common. Among the animals are lions, leopards, and enormous serpents, some of which are venomous. The inhabitants may be divided into 4 classes. 1. The Moors, who are the ruling people, and constitute the mass of the population in all the cities. They are among the most vicious and profligate people on the earth. They are pirates, and formerly committed great depredations in the Mediterranean, on the commerce of Christian nations. 2. The Jews, who are the principal merchants, and are continually insulted and most cruelly oppressed by the Moors. 3. The Arabs, who live in tents, in independent tribes, and wander with their flocks and herds in the interior districts, on the borders of the desert. 4. The Brebers, who are descendants of the ancient natives, and inhabit the mountainous districts. They live in fixed villages, and cultivate the ground. The religion of all these classes, except the Jews, is Mahometanism. The names of the Barbary States are Barca, Morocco, Algiers, Tunis, and Tripoli.

Bassora, *Bussora*, or *Basrah*, a city of Asia, in the gov. of Bagdad, on the W. bank of the Shat-ul-Arab, 70 m. from the mouth of that river, which is navigable hither by vessels of 500 tons burthen. It is surrounded by walls and fortified. The houses, in general, are mean, being constructed of clay, with a small proportion of brick. Bassora is inhabited by Arabs, Turks, Persians, Armenians, and some Europeans, who reside in the factories belonging to their respective countries. The Arabs form the most numerous class, and after them the Turks and Armenians. Bassora is the grand emporium for all the Indian produce which is sent into the Turkish empire. From the various ports of Hindostan, it receives silk, muslin, linen, white and blue cloth, gold and silver stuffs, various metals, sandal wood, and indigo; pearls from Bahrein, and coffee from Mocha; shawls, fruit, and the precious metals, from Persia; spices from Java, and European commodities from different ports. The greater proportion of the commerce is carried on in Arabian bottoms, the finest vessels navigating the Indian seas now belonging to the merchants of Maskat. The trade with the interior is conducted by means of caravans to Aleppo and Bagdad, whence the goods are conveyed to Constantinople. The situation of the place is unhealthy, occasioned by the inundations of the river. The neighboring country is greatly harrassed by tribes of predatory Arabs. It is 210 m. S. Ispahan, 1,815 S. E. Bataria, city, near the mouth of a small river, on the N. coast of the island of Java, the capital of all the Dutch, or as they are now termed, the Netherland Indies. It was formerly styled the Queen of the East, but now retains very little of its ancient splendor. From its westerly situation, and easy access, it is the best and most convenient port in the island. In point of security, however, and conveniency for the landing and shipping of goods, it bears no comparison to the fine harbor of Surabia. There is a broad flat mud bar at the mouth of the river, which is a source of great commercial expence and inconvenience. Batavia is well known in Europe by its fatal climate. The disease which chiefly proves mortal, is a fever generated in the putrid mud banks and stagnant canals which are within two miles of the shore, and is strictly confined to that limit. A stranger who sleeps for six or eight days successively in the town, may certainly reckon on catching the fever, and it is more than an equal chance that he falls a victim to this terrible malady. The rest of the island is even eminent among tropical countries for its salubrity. The population was formerly 160,000, but is now reduced to 47,217, of whom 2,028 are Europeans and their descendants, and the rest Chinese, Javanese, Malays, other orientals, and slaves. Batavia surrendered to the British in 1811, and was restored in 1816. Lon. 106° 51' E. Lat. 6° 10' S.

Bath, city, England, in Somerset, bounded N. W. and S. by hills of considerable elevation, and intersected by the river Avon. This city is celebrated for its medicinal waters, and for its various sources of amusement, and is equally the resort of valetudinarians and the votaries of pleasure. There are places of worship for the members of the Established Church, Methodists, Independents, Baptists, Moravians, Roman Catholics, Unitarians, and Quakers. The Cathedral is the last and purest specimen of Ecclesiastical Gothic architecture in England. The benevolent institutions of Bath are very numerous: of these, the chief is

the general hospital, opened in 1742, for the reception of the sick poor from every part of the kingdom. The hot springs to which Bath principally owes her celebrity, were resorted to in the time of the Romans, and many splendid fragments of Roman architecture are still preserved. There are 4 public baths, King's and Queen's bath, the Cross bath, and the Hot bath. The temperature of the different springs varies from 93° to 117° of Fahrenheit. The disorders particularly benefitted by the Bath waters are obstructions of the viscera, palsies, gout, rheumatism, jaundice, &c. The streets and houses of modern Bath are of very superior construction. The Queen's Square, Circus, Crescents, and Parades are particularly admired, and being built with a fine free stone, Bath is one of the most elegant cities of Europe. It is in lat. 51° 42' 32" N. and in lon. 2° 21' 30" W. 107 m. fr. London, 67 fr. Oxford, 41 fr. Gloucester, 39 fr. Salisbury, and 12 fr. Bristol. Pop. 38,434.

Lon. 69° 49' W. Lat. 43° 55' N. The river is here a mile wide. The town is built on a declivity, and extends a mile and a half along the river, and three fourths of a mile into the interior. The streets run parallel to each other at right angles to the river. Bath is a flourishing town and contains two banks, an academy, and 3 churches, 2 for congregationalists, and 1 for baptists. Pop. 3,026. Amount of shipping in 1815, 20,628 tons.

Bathurst, a British settlement in West Africa, formed within a few years on the island of St. Mary's, at the mouth of the Gambia, between 13° and 14° N. lat. The island is a low sandy spot, separated from the main land by swampy creeks which however easily admit of being dyked. The object of the settlement is to introduce a regular trade into the Gambia, in lieu of the slave trade; and thus far it has been remarkably prosperous. In 1819, the settlement contained more than 1,000 souls, besides the garrison; and the duties on wax, ivory, gum, gold, and hides, exported to Great Britain, during the same year, amounted to more than £11,000 sterling. In point of commercial importance, Bathurst bids fair to become the first British establishment in W. Africa.

Bavaria contains at present 32,000 square miles, and 3,560,000 inhabitants. It has risen gradually to its present rank among the nations of Europe. In 1801 it contained only 22,000 square miles, and 2,302,000 inhabitants; but during the prosperity of Bonaparte, Bavaria generally sided with France in her wars with other European powers; and was paid for her attachment, by extensive territorial aggrandizements, made chiefly at the expense of Austria. In 1813, after the defeats of Bonaparte, the king changed his line of policy, and concluded a secret treaty with the allied powers, in which he engaged to furnish a certain number of troops in support of the common cause, and received in return a pledge that the integrity of his territories should be respected. The form of government in Bavaria is an unlimited monarchy. The succession to the crown is hereditary in the male line, but when it is extinct in all its branches, the supreme power may be vested in a female. The revenue is estimated at about 2,600,000*l*. Bavaria has long been burdened with a public debt, which was not a little increased by the assumption of the debts of her newly acquired dominions. The army amounts to between 40,000 and 50,000 men. The prevailing religion in Bavaria is the Roman Catholic, but Protestants enjoy the unrestrained exercise of their worship, and are eligible to civil and military offices. The number of monastic institutions in this part of Germany was formerly very great, but they have almost all been suppressed by the present government. Education has of late years been widely diffused through the Bavarian states. In the new constitution of Germany, as framed by the 53d and following acts of the Congress of Vienna, this state has one vote in the federative diet, and four in the general assembly. Munich is the capital.

Bayonne, s-p. France, in Lower Pyrenees, at the conflux of the Nive and Adour, 2 miles from the bay of Biscay. The Nive and Adour, the former of which is navigable for 18 miles, and the latter for fifty, form a commodious harbour, and serve to convey timber, tar, and iron from the Pyrenean mountains to Bayonne. A citadel, constructed by Vauban, on the top of an eminence in the suburb, commands both the harbour and the town. French and foreign goods go from Bayonne into Spain, in exchange for wood, iron, fruit, gold and silver. Masts and other wood for ship building brought from the Pyrenees, are exported to Brest and other ports in France, and wines and chocolate in great quantities to the north of Europe. The military weapon called the bayonet, takes its name from this city, where it was invented in the 17th century. The language of the common people here is the ancient Biscayan. 44 m. W. N. W. It consists of four parts: 1. the Fortress, standing on a steep eminence in the centre of the whole, and commanding the Danube. It is inclosed with high walls, strong towers, and a triple ditch, and is provided with mines and bomb-proof casemates. 2. the Water-side Division, lying on the north, not far from the junction of the two rivers, and defended in like manner by walls and ditches. 3. the *Rascian* town, towards the west, in the direction of the Save, is inclosed with walls and palisades; and 4. the *Palanka*, which encircles the fortress on the south and east. The population is 30,000, and consists principally of the families of the Turkish Jamissaries, by whom the fort is garrisoned. Belgrade is advantageously situated for commerce, having an easy communication with Vienna and the Black sea. Its situation as the key of Hungary, has frequently ren-

dered it the object of fierce contention between the Austrians and the Turks.

Bellows falls, in Connecticut river, at Walpole, N. H. In the midst of the channel worn in the rocks, a huge rock remains, on each side of which is a passage for the water. As the E. side, however, is more elevated, the water, except when the river is high, does not pass over it; and the whole Connecticut which above is about 350 feet wide and 25 feet deep, shoots through a space 16 feet wide, descending by successive pitches in the course of half a mile 44 feet. On the western side of the falls is a canal three-fourths of a mile long, 60 feet broad at top, and 18 at bottom, and 20 feet deep, with 7 locks. A bridge is thrown over the river, supported in the middle by the rock. The village of *Bellows-Falls* contains a post-office and several mills.

Beloochistan, a country of Asia. In its most comprehensive acceptation, it includes the whole space within lat. 24° 50'—30° 40' N. and lon. 58° 55'—67° 30' E. bounded N. by Seistan and Cabul, S. by the Indian ocean, W. by Kerman, and E. by Sindh. Area estimated at 176,000 sq. miles. Pop. 3,000,000. A large proportion of the country is mountainous. Water is generally scarce; the principal rivers being little else than mountain torrents, losing themselves in the sands, or finding their way in shallow streams to the sea. There are two great classes of inhabitants, the Belooches and Brahooes, who differ from each other in their outward appearance, as well as in their manners. The Belooches are tall, handsome, and active. They are lawless robbers, and undertake distant excursions in quest of booty, or for the purpose of carrying off the inhabitants of other countries for slaves. They are Mahometans of the Soonee faith, and entertain a great antipathy to other sects. The Brahooes have short thick bones, round faces, and flat features. They are a quiet and industrious race, and, although equally brave, free from the predatory pursuits of the Belooches.

The chief town of Beloochistan is Kelat, where the khan or sovereign of the whole country resides. His power has declined of late, in consequence of some of the tributary chiefs having declared themselves independent. The total number of troops which the khan can raise is about 60,000. Hindoos reside throughout Beloochistan, and occupy 4 or 500 of the best houses in the capital, under the protection of government. They are all occupied in commercial concerns, and have become the wealthiest class in the whole country.

Benares, a large and valuable district, Hindostan, on both sides of the Ganges, between 23° and $27^{\circ} N$. lat. containing 1200 square miles of fertile soil, which produces all kinds of grain, and a quantity of sugar, indigo, and opium. It is exceedingly populous. In 1775 the sovereignty of this district was ceded to the British.

Benares, city, Hind. cap. of Benares district, on the N. bank of the Ganges; in lon. $83^{\circ} E$. lat. $25^{\circ} 30' N$. 460 m. N. W. Calcutta. It is the ancient seat of Brahminical learning, and denominated "the Holy City." The Hindoos conceive that a person dying at Benares, is certain of paradise, a notion which contributes to the increase of its population. It contains 12,000 stone and brick houses, from one to six stories high; and above 16,000 mud houses. Pop. in 1803, 582,000; during the festivals, the concourse is beyond all calculation. The residence of the English judge, and civil establishment, is at Secrole, a pleasant village, about 2 miles from the city, where there is a military cantonment for a battalion of sepoy. This city carries on a very extensive trade with all parts of India. It is the principal mart for the diamonds found in the mines of Bundelcund, and its manufactures of gold and silver lace, silks, and brocades, are carried to all parts of the East. The Church Missionary Society have lately sent sev-

eral missionaries here, with a printing establishment. They have also the superintendence of a charity school, which has been very liberally endowed by a native Hindoo with the sum of 88,000 rupees, or 11,000*l*. Students are admitted from 12 to 18 years of age; the course of study is 12 years. In 1819, the number in the school was 121, of whom 63 were studying English, 32 Persian, 11 Hindee and Sanscrit, and 15 Bengalee.

Bensfelden, t. France, in Lower Rhine, 15 m. S. S. W. Strasburg. Pop. 1,220.

Bengal, an extensive and valuable province of Hindostan, 400 miles long and 300 broad, situated between 21° and $27^{\circ} N$. Lat. and between 86° and $92^{\circ} E$. Lon. On the N. and E. it is bounded by the mountains of Nepaul, Assam, and Ava; on the S. by a line of inhospitable and dangerous sea coast; on the W. it joins Bahar and Oude. Extent of the territories under the Bengal presidency 222,000 sq. miles. Pop. 39,000,000, according to

the estimate of Hamilton. Its soil produces every thing requisite for the sustenance of life, and in such abundance that the crops of one year are sufficient for the consumption of its inhabitants for two years. The revenues consist chiefly of rents paid to the government for land. In the years 1811-12 they amounted, including those of Bahar and Orissa, to 2,590,000*l.* sterling. The exports of Bengal are principally rice, cotton and silk both raw and manufactured; indigo, sugar, saltpetre, ivory, tobacco, and drugs of various kinds. Its imports are gold and silver, copper and bar iron, woollen cloths of every description, tea, salt, glass and china ware. The south-east districts produce elephants, which are used by the opulent natives for state or riding, and also for carrying the camp equipage of the army. Bengal is intersected by the Ganges, the Brahmapootra, Dummooda, and several other rivers, so connected by various streams, and the annual inundations, that there is scarcely a town which does not enjoy the benefits of an inland navigation. The greater proportion of the inhabitants are Hindoos: they are very dark, but not so black as Africans. They are small and delicate in their persons, of a timid temper, and excessively litigious. The Mahometans, who constitute about one tenth of the population, are the descendants of the Afghan and Mogul conquerors, and Arabian merchants. The descendants of the Portuguese are numerous. The climate of Bengal is found to agree very well with European constitutions. The year is there divided into three seasons, viz. the hot, the rainy, and the cold; the former begins in March and ends in June; the rains then commence, and continue till October, after which it becomes cool, and the weather continues pleasant for four months. This province in 1757, fell into the hands of the English, who have gradually changed its form of government, and introduced a code of regulations founded on the Hindoo, Mahometan, and English laws, by which impartial justice is administered to all the inhabitants, and toleration granted to all religions; owing to which the country improves, and the population increases. Calcutta is the seat of government. The military establishment of Bengal consists of 3 battalions of European artillery, with a number of natives attached, for the subordinate departments; 1 regiment of European infantry; 60 battalions of native infantry, and 8 regiments of native cavalry: to each company of native infantry and troop of cavalry an European officer is attached. Exclusive of the above, there are always some of the king's regiments employed under the Bengal government.

Benin, a kingdom of W. Africa, extending from the Rio Lagos to the Rio Formosa, which falls into the Atlantic in lon. 5° 20' E. The whole coast presents a succession of estuaries, some of them very broad, and the origin of which has never been explored. These streams, dividing into branches and intersecting the country, form a great number of alluvial islands, and this aspect of the coast has suggested to a recent geographer, that these islands might form the Delta of the Niger or great central river of Africa, the termination of which is involved in so much mystery. The king of Benin is an absolute monarch. The inhabitants are gentle in their manners and in agricultural industry are superior to most of the African tribes. Berbice, a district of Guiana, which formerly belonged to the Dutch, but is now in possession of Britain, having been finally ceded by the peace of Paris in 1814. It extends along the sea-coast, 150 miles from Abarry creek on the W. to Corantine river on the E. The coast is low and marshy, and except at the settlement, is inundated from the sea. All the plantations are strongly diked. The land is continually encroaching upon the sea. On many parts of the coast, it has advanced two miles within 20 years. The soil is a rich clay, and yields maize, sugar cane, cocoa, all the tropical fruits, and all the necessities and luxuries of life. The climate is very uniform, the range of the thermometer being from 76° to 84°; and is much healthier than formerly. The population of Berbice in 1811, according to official returns, was 25,959, of whom 550 were whites and the rest negroes. Within a few years, however, many of the estates have been broken up, and the slaves transferred to Demerara. The population at present is about 18,000. The exports are sugar, rum, molasses, cocoa, &c. The value of exports in 1810, was 51,785*l.* and of the imports, 191,566*l.* New Amsterdam is the capital.

Berlin, the capital of the Prussian states, is on the Spree, in the Middle Mark of Brandenburg, and is one of the most beautiful cities of Europe. the circumference of its walls and pallisades is 11 miles, and the entrance is through 15 gates. The streets are for the most part broad and straight, and the squares regular and spacious. The population made a rapid progress during the last century. In 1661 it was only 6,500, while in 1818 it was 182,387, or including the military, 188,485. Berlin is indebted for its chief embellishments to the celebrated Frederick II. who is supposed to have expended yearly in the improvement of this city 400,000 dollars. The city is made up of 5 distinct towns. I. *Berlin Proper*, in which are the governor's house, and the council chamber; the royal arsenal, from which the whole Prussian army is supplied with clothing; Frederick's hospital, in which above 800 children are gratuitously educated. II. *Coln*, or *Cologne on the Spree*, in which is the royal castle, 430 feet in length, and 276 in breadth. This building contains the king's library, which has upwards of 200,000 volumes, and receives a frequent increase, as two copies of every new book must be deposited in it by the publishers. III. *Frederickswerder* or *Frederick's Island*, containing the medical college, the old custom-house, the old mint, the royal arsenal and foundry, the stamp-office, &c. IV. *Dorotheenstadt*, or *New Town*, containing among others, the royal academy of sciences, with its elegant hall, library, and cabinet of medals, the observatory, the anatomical theatre, &c. V. *Frederickstadt*, the largest of the 5 towns. Here are situated the principal courts of law, the porcelain manufactory, the magnificent palace of the grand master of the order of Malta, &c. Berlin is highly distinguished for its manufactures: the principal articles are silk, woolen, linen, and cotton goods, jewellery, porcelain, &c. The number of manufacturers is about 16,000, of which number, 3,000 are engaged in the silk manufactories, and 5,000 in the royal porcelain manufactory.

Berlin, p-t. Hartford co. Ct. 11 m. S. Hartford, 23 N. New Haven, on the turnpike road between these two cities. It is divided into three parishes: Worthington, Kensington and New Britain. Pop. 2,887. Worthington is the principal seat of the manufacture of tin ware, which is carried on by pedlars to a very great extent. The pedlars set off in the autumn in waggons loaded with the tin ware, together with other articles of merchandize, and proceed chiefly to the southern and western States. Workmen are also sent out by water with a sufficient quantity of the raw materials to employ them during the winter and establish themselves in different towns in the interior. To them the pedlar resorts, when his stock is exhausted, for a fresh supply. In this way a large amount of goods is sold during the six or eight months that they are absent.

Bermudas, or *Somer's Islands*, a cluster of small islands in the Atlantic Ocean, in number about 400, but for the most part so small and barren, that they have neither inhabitants nor name. 200 leagues distant from Cape Hatteras in N. Carolina, which last is the nearest land to them. They extend from N. E. to S. W. about 45 miles. Their whole coast is surrounded with rocks. The north point of the islands lies in lat. 32° 34' N. lon. 63° 28' W. The largest of these islands are St. George, which is 4 or 5 miles long, and 2 broad; St. David, Cooper, Ireland, Somerset, Long island, Bird island, and Nonesuch. On the first there is a town, containing about 300 houses. The winter is hardly perceptible here. The fields and trees are clad in perpetual green, and so salubrious is the air, that invalids frequently come hither for the recovery of their health. The Bermudas contain from 10,000 to 12,000 acres of poor land, of which nine parts in ten are either uncultivated, or reserved in woods for the supplying of timber for building small ships, sloops, and shallops for sale; this being the principal employment of the inhabitants. Pop. estimated at 10,381; 5,462 of whom are whites, and 4,919 are blacks. They have two harvests of indian corn in the year, one in July, the other in December. They likewise cultivate tobacco, legumes, and fruit sufficient for their wants. The imports in 1809, amounted to £11,648, and the exports to £34,279.

Birmah, *Burmah*, or *Birman empire*, sometimes called *Ava*, a powerful empire of Asia composed of the 4 ancient kingdoms of Ava, Pegu, Arracan and Cassay. Its limits are not accurately known, but it is supposed to extend from lon. 92° to 102° E. and from lat. 9° to 26° N. It is bounded N. by Assam, Thibet and China; E. and S. by Siam; W. by the bay of Bengal, and a range of mountains, which separates it from British India. It is about 1,200 miles long from N. to S. but varies much in breadth. This empire is of modern origin. It is situated mostly between the tropics, but being a hilly country does not suffer from heat or from inundations like Hindoostan, and is therefore more favorable to European constitutions. The soil produces all kinds of grain and vegetables, and all the tropical fruits; but its principal production is the celebrated Teak timber, or Indian oak, which is said to be more durable, and to resist the worms better, than any wood that is known. The manufactures consist chiefly of cotton and silk goods, saltpetre, gunpowder, and various kinds of pottery.

The principal river is the Irawaddy. The principal ports are Arracan, Negrais, Rangoon, Syriam, Tavoy and Merguis; but the government is so jealous of foreigners, that all commerce with Europeans is confined to Rangoon. The ancient capital was Ava. The present capital is Umrappora, on the Irawaddy, 400 miles from its mouth.

The population of Birmah is uncertain, but has been estimated at 17,000,000. The army in peace consists of only a few thousand cavalry, but on any emergency, every village is obliged to furnish soldiers according to its population. The principal strength of the Birmans consists of war boats, built very long and narrow, carrying from 30 to 60 armed men, and having a piece of cannon on their prow.

The government is despotic. In religion, the Birmans are followers of Boodh, and have numerous temples and idols. The character of the Birmans is very different from that of their neighbors, the Hindoos. They are a lively, passionate and intelligent race of men. Their mode of punishing crimes is of the most horrid kind. Among the modes of inflicting capital punishment are beheading, crucifying, starving to death, ripping open the body, sawing it in two, pouring red hot lead down the throat, plunging into hot oil, and roasting to death by a slow fire. The milder punishments are putting out the eyes, cutting off the tongue, the hands, feet, ears, nose, &c. The lives and property of travellers are very insecure in this

country, the principal roads and rivers being infested with robbers and murderers.

The American Baptists have a mission at Rangoon.

Birmingham, a market t. England, in Warwickshire, 62 m. N. W. Oxford, 87 N. Bristol, and 109 N. N. W. London. It is one of the first manufacturing towns in Europe, and is particularly celebrated for articles of hardware. It is hardly possible to describe the various processes adopted in this wealthy and populous place, for abridging labour. They comprehend every complicated and ingenious contrivance, from the most ponderous machines, such as steam engines, down to those which are framed for operations of the most nice and minute accuracy. Under the influence of this powerful machinery, the rude material of iron is manufactured into all sorts of useful implements. A coining mill was erected here in 1788, which has since been improved so as to work eight machines, and is now capable of striking between 30,000 and 40,000 pieces of money in the space of an hour. Muskets occupy a considerable number of workmen, and no less than 14,500 have been delivered per week into the ordnance office for the use of government. Buttons of all descriptions are manufactured; and it is said, that at the pin-works 12,000 pins can be cut and pointed in an hour. Steel screws, watch chains, and vast quantities of toys are likewise manufactured; and human industry is turned to such account, that not only great numbers of women find employment, but children only a few years old, can assist in some of the operations. There are very extensive brass founderies, manufactories for whips, and many others too numerous to be mentioned. Commerce is much assisted by several canals, which are of the most essential service, by enabling the town to carry on a direct intercourse with distant countries, instead of trading with them through the medium of the metropolis.

Birmingham is not an incorporated town, and, notwithstanding its size and importance, has no representation in parliament. Population 85,753. The average of interments for six years, ending 1801, was found to be as 1 to 59, whereas in London it was as 1 to 31, and in Manchester as 1 to 37. Dr. Price considered Birmingham one of the healthiest towns in England. Birmingham has 3 churches and 5 chapels connected with the establishment, and 2 places of worship for Unitarians, 3 for Independents, 4 for Baptists, 3 for Methodists, 2 for Roman Catholics and 2 for Jews. Among the public institutions are several flourishing schools, a work house on a large scale, a general hospital, a dispensary for the relief of indigent sick persons, a society for the relief of deaf and dumb children, an institution for the relief of persons laboring under bodily deformities, and a handsome theatre.

Biscay, a province of Spain; in the most extended sense, it comprises the 3 provinces of Alava, Guipuscoa, and Biscay proper, and is bounded E. by France, N. by the bay of Biscay, W. by Las Montanas de Santander, and S. by Burgos. Biscay preserves a marked distinction from the rest of Spain, and though each of its component parts has its own constitution, the whole forms a kind of separate state, governed by a provincial assembly, according to ancient laws and usages. The king of Spain, who is simply styled lord of Biscay, has no right to impose taxes, but a demand is made in his name, and the supply is granted in the shape of a donative, or free gift; the manner of raising it remaining with the provincial states. So jealous are the Biscayans of their liberties, that no custom-house was allowed till lately within the province. Population, 310,758. Chief places, Bilboa, in Biscay proper; Vittoria, in Alava; and St. Sebastian, in Guipuscoa.

Biscay Proper, a district of the foregoing province, is inclosed by the bay of Biscay, Old Castile, Alava, and Guipuscoa. Pop. 120,000. The coast is inhabited by seafaring people and fishermen; and in the interior, immense quantities of iron are extracted from the ore, and wrought into different articles. The foreign trade of the province is carried on at Bilboa.

Black Sea, or *Euxine Sea*, a large inland sea, partly in Europe, and partly in Asia, bounded W. by European Turkey, E. by Mingrelia, Circassia, and Georgia, N. by Russian Tartary, and S. by Natolia. It is 932 miles long, on an average 320 broad, 3,800 in circumference, and contains, 300,000 sq. miles. The principal ports are Odessa, Kinburn, Cherson, Nicoleuf, Sevastopol the chief station of the Russian fleet, and Caffa. The Turks formerly would not suffer Europeans to navigate this sea, but by the treaties concluded in 1774 and 1791, they allowed a Russian navy to be formed and to have a free passage through the Dardanelles. This sea was in 1784 opened to Austria, and afterwards at the peace of Amiens to the Prussian, Spanish, Neapolitan, Dutch, Ragusan, and English merchant flags. The commerce has since that period greatly increased. In 1803, 815 vessels entered the Russian ports from the Mediterranean. Of these 552 were for Odessa. They came chiefly in ballast, and returned loaded with corn.

Bohemia, a kingdom in Germany, forming part of the Austrian dominions. It is bounded N. by the kingdom of Saxony; E. by Silesia and Moravia; S. by Austria proper; and W. by Bavaria. It extends from lat. $48^{\circ} 30'$ to $51^{\circ} 5'$ N. and from lon. 12° to $16^{\circ} 50'$ E. Its greatest length is 200 miles, its greatest breadth 180, and its superficial extent 20,922 square miles. It is separated by

the river Moldau into two parts nearly equal, and, exclusive of the metropolis, is divided into the 16 following circles; which take their names from their chief towns—Buntzlau, Konigsgratz, Bitschow, Chrudim, Czaslau, Budweis, Tabor, Prachin, Pilsen, Klattau, Saatz, Elnbogen (including the small district of Egra,) Leutmeritz, Rakonitz, Beraun, and Kaurzim.

Bohemia resembles a great basin, being surrounded on every side by high mountains; it has the Sudetan chain, and the Riesengebirge on the N. E.; the mountains of Moravia on the S. E. and S.; the Bohmerwald on the W. and the Erzgebirge on the N. The principal river is the Elbe, which receives in its course the Auxa, Erlitz, Dobrawa, Iser, Moldau, Eger, and others. The soil yields corn, pulse, hops, flax, hemp, fruit, and all kinds of garden vegetables in abundance. Few countries are richer in mineral productions than Bohemia. Here are found silver, tin, iron, quicksilver, cobalt, zinc, arsenic, bismuth, calamine, antimony, sulphur, saltpetre, vitriol, alum, and pit coal; salt is no where met with. The principal manufactures are yarn, linen, cambric, veils, thread, lace, stockings, ribbons, printed linen, wax-cloth, woollen stuffs and glass. The principal imports are salt, wine, spirituous liquors, silk, Spanish wool, cotton, quicksilver, iron, lead, hardware, jewels, trinkets, and dye-stuffs. The principal places through which commerce is carried on, are Vienna, Trieste, Leipzig, and Hamburg.

The language is the Bohemian, or Crecheisch dialect of the Slavonic, and is nearly allied to the Polish, but contains more words of German origin. The population is 3,203,222, of which number 3,092,393 are Roman Catholics, about 50,000 Jews, and the remainder Calvinists, Lutherans, and Hussites. The revenue is estimated at 2,000,000*l.* Bohemia is a part of the Austrian empire. It has an assembly of States, but their power is merely nominal.

Bologna, anciently *Bononia*, the second city in magnitude and opulence in the Ecclesiastical states, is at the foot of the Appenines, between the Savena and Rino, in a rich and fertile valley. The churches are of ingenious and costly architecture, and are adorned in the interior with beautiful paintings. Here is a famous university frequented by foreigners from different parts of

Europe. It consists of five faculties, theology, canon law, Roman law, medicine, and philosophy. The Spaniards, Germans, Hungarians, Illyrians, Flemish, Piedmontese, and other nations, have each their particular college. The principal manufactures are cloth, silk stockings, and other stuffs; satins, damasks, taffeta, velvet, gauze, crape, and linen, which give occasion to an active trade with Genoa, Leghorn, and Venice, the most important branch of which is in twisted silk. In 1799, Bologna was taken by the Austrian general Klenau; but after the battle of Marengo, it fell into the hands of the French. It is now restored to the pope. 24 m. S. E. Modena, 26 S. E. Bombay, isl. on W. coast of Hindostan, containing the city of Bombay, which is the capital of all the British settlements on that side of the peninsula. The island is $6\frac{1}{2}$ miles long from N. to S. and about 1 mile broad near the fort. It is separated from the mainland by a narrow strait, and is connected with the neighboring island of Salsette by a causeway. 177 m. S. W. Surat. Lon. $72^{\circ} 38' E$. Lat. $18^{\circ} 58' N$.

The city is about a mile in length, and a quarter

of a mile in breadth, and is surrounded by fortifications. In the centre is the Green, a large open space, which is surrounded with many large and well built houses. Here is the English church. On the right of the church gate is the bazar or market-place, which is crowded and populous, and is well supplied with all kinds of merchandize and provisions. The bazar is the residence of the native merchants. Besides the English church, there are numerous temples for the Hindoos, and mosques for the Mahometans, a synagogue for the Jews, chapels for the Portuguese Roman Catholics, and a Presbyterian church. The population is estimated at 220,000, of whom about three-fourths are Hindoos, 8,000 Persees, 8,000 Mahometans, 3 or 4,000 Jews, and Portuguese in considerable numbers.

Bombay commands an extensive commerce with the countries on the Persian and Arabic gulfs, with the west and east coasts of India, the islands in the Eastern ocean, and China. With Europe also, and with different parts of America, it carries on a considerable trade. Ship-building is carried to great perfection by the Persees; and for this employment Bombay is well fitted, on account of the immense teak forests which lie along the W. side of the Ghaut mountains. Here are ropewalks equal to any in England, with the exception of the king's yard at Portsmouth, a large and magnificent dock-yard, and forges for all kinds of smith's work. With all these advantages, Bombay has become an important naval arsenal; and within these few years ships of from 600 to 1,000 tons have been built in its yards, equal in durability and beauty of construction to any in the world. Bombay has been in possession of the English East India company since 1688. The administration is vested in a governor and three councillors, who are placed under the control of the supreme government of Bengal. The climate of Bombay often proves fatal to Europeans; the liver complaint being more frequent here than in any other part of India. The American Board of Commissioners for Foreign Missions have employed several Missionaries in this city and its neighborhood since 1814. In 1820 the number of missionaries was 5; holding their primary seat in Bombay, and occupying a station at Mahim, distant 6 miles on the N. part of the same island, and another at Tannah, distant 25 miles, on the island of Salsette, of which it is the chief town. Their principal and daily work is preaching the gospel to the heathen. In prosecution of it they not only visit the temples and places of resort in the city, but make circuits upon the islands, and in the provinces of the continent. They have also engaged in the translation of the Scriptures. In 1819 they had translated the whole of the New Testament and a considerable part of the Old, into the Mahratta language, which is spoken not only in Bombay, but by many millions on the neighboring continent. There is a printing press attached to the mission, and large editions of select portions of the Bible, and numerous tracts have already been published. Another object, on which the Missionaries have bestowed much attention, is the education of native children. In 1819, the total number enrolled in their schools, as regular pupils, was more than 1,000, and funds only were wanting to increase the number almost indefinitely. In all the schools, those who can read are daily employed in reading or committing to memory portions of the Bible or religious tracts.

Borne, r. Eng. runs into the Tame.
Borneo, the largest island in the world, except New-Holland, is in the centre of the Asiatic islands, and is intersected by the equator. It is 800 miles long, and is supposed to contain more than 300,000 square miles. The coasts are low and swampy. The interior is almost wholly unknown to Europeans. The commerce of the island is

principally in the hands of the Chinese, who export gold, diamonds, pepper, camphor, and edible bird's nests, which are regarded in China as a great delicacy. Borneo produces also the ourang-outang, a singular animal, bearing a striking resemblance to the human species. It is of short stature, scarcely exceeding three feet in height, with slender limbs and a broad and naked face, though the rest of the body is profusely covered with hair. When taken young it becomes extremely gentle and docile, and much attached to those around it. It sheds tears when displeased, rolls on the floor, and beats its head against it with all the gestures of a passionate child. The population of the island is estimated at 3,000,000. Lon. 109° to 119° E. Lat. 4° N. to 7° 25' S.

Borneo, the capital, is in the N. W. part of the island, on a river 10 miles from the sea. The houses are built over the water, and supported on posts, and the inhabitants communicate with each other entirely by boats. Alligators lurk below to prey on the offals dropping through the lattice work of the floor. This mode of building cities is not uncommon in this part of Asia. Lon. 114° 44' E. Lat. 4° 56' N.

Bornou, an extensive kingdom in the interior of Africa, bounded N. by the desert of Bilma and of Lybia; E. by countries unknown; S. by Bergoo and Bergherme; W. by Cassina and Asben. The emperor is one of the most powerful sovereigns in the interior of Africa. Bergoo, Bergherme, Wangara, and Cassina, are his tributaries. The chief grain is Indian corn. The whole country is traversed by a great river called the Wed el-Gazel, which runs from south to north, and is lost in the desert of Bilma. The commerce of Bornou is chiefly carried on by the merchants of Mourzouk in Fezzan, which forms a central point for the interior commerce of Africa. The imports consist of brass and copper; red woollen caps, check linens, light coarse cloth, baize, carpets, silk, sabre blades, Dutch knives, scissors, coral beads, small looking-glasses, and Gooroo nuts from the south of the Niger. The exports are slaves, gold, and civet.

Bornou, cap. of the kingdom of Bornou is about a day's journey from the Wed-el-Gazel. It is said to be a large city. It is placed by major Rennell in lon. 22° 57' E. lat. 24° 32' N.

Boston, s-p. and cap. Mass. in Suffolk co. and the largest city in New-England, 115 m. S. S. W. Portland, 56 S. by W. Portsmouth, 40 N. N. E. Providence, 100 E. N. E. Hartford, 210 N. E. New-York, 300 N. E. Philadelphia, 436 N. E. Washington, and 300 S. S. E. Montreal. Lon. 70° 58' 53" W. Lat. 42° 22' 23" N.

It is pleasantly situated at the bottom of Massachusetts-bay, on a peninsula of an uneven surface, 2 miles long, and in the widest part about 1 mile wide. The harbor is one of the best in the United States. It has a sufficient depth of water for the largest vessels at all times of tide, and is accessible

at all seasons of the year. It is safe from every wind, and so capacious that it will allow 500 vessels to ride at anchor, while the entrance is so narrow as scarcely to admit 2 ships abreast. The entrance is well defended by Fort Independence and Fort Warren.

Boston is very extensively engaged in commerce. There are probably few cities in the world where there is so much wealth in proportion to the population. The amount of shipping owned here in 1815, was 143,420 tons; a greater amount than belonged to any other port in the United States, except New-York. The country in the immediate vicinity is fertile and populous, and connected with the capital by fine roads. The Middlesex canal opens a water communication with the interior of New-Hampshire.

Among the literary institutions are the Boston Athenæum, which contains about 18,000 volumes, the Boston library, which has 5 or 6,000, and several other libraries belonging to literary societies. Among the benevolent institutions are the General Hospital, founded in 1818, which has been richly endowed by the liberality of the State and of individuals, and a Hospital for the Insane, the buildings of which are situated in Charlestown.

There are four bridges connecting Boston with the adjacent towns. Charles river bridge, which connects it with Charlestown on the north, is 1,503 feet long, 42 broad, and stands on 75 piers. West Boston bridge, connecting it with Cambridge-port on the west, is 3,483 feet long, and stands on 180 piers. Cragie's bridge is between these two, and connects it with Cambridge. A mill-dam nearly two miles long and fifty feet wide was completed in 1821, across the bay on the S. W. side of the city, the object of which is to open a new avenue, and also to create a water power sufficient to put in operation extensive tide mills, and other water works.

The houses in the older part of the city are plain, and the streets generally narrow and crooked; but in West Boston and in several streets recently laid out, the private buildings are more splendid than in any other city in the United States. In 1817 there was erected on each side of Market-street, a block of brick stores more than 400 feet in length, and 4 stories high; and on Central Wharf, another immense pile of buildings was completed the same year, 1,240 feet long, containing 54 stores, 4 stories high, having a spacious hall in the centre, over which is erected an elegant observatory.

Among the public buildings are the State house, which is built on elevated ground, and commands a fine view of the surrounding country; the new court house, built of stone, at an expense of \$92,000; Faneuil hall where all public meetings of the citizens are held; a theatre; an alms-house; a custom house, and 28 places for public worship, 11 of which are for Congregationalists, 4 for Episcopalians, 4 for Baptists, 2 for Methodists, 3 for Universalists, 1 for Roman Catholics, 1 for Friends, a New-Jerusalem church, and the seamen's chapel.

The population in 1800 was 24,937, in 1810, 33,250; and in 1820, 43,298. The vicinity of Boston is very populous. The inhabitants have long been celebrated for their enterprize and intelligence, and for the liberality with which they support religious, literary, and humane institutions.

The country around Boston is the admiration of every traveller of taste. The view from the dome of the State house surpasses any thing of the

kind in this country, and is not excelled by that from the castle hill of Edinburgh, or that of the bay of Naples, from the castle of St. Elmo. Here may be seen at one view, the shipping, the harbor, variegated with islands and alive with business; Charles river, and its beautiful country ornamented with elegant country seats; and more than 20 flourishing towns. The hills are finely cultivated, and rounded by the hand of nature with singular felicity.

Botany Bay, a bay on the S. E. coast of New Holland, discovered by capt. Cook in 1770. It has been since converted into a British settlement for the reception of exiled criminals. The climate is salubrious, the soil fertile, and the settlement flourishing. In 1810, the population was 10,454, viz. 5,513 men, 2,230 women, 2,721 children. The colony consists of four districts, Sidney, Paramatta, Hawkesbury, and Newcastle, and it has two dependencies, Hobart's-town and Port Dalrymple on Van Diemen's land, about 300 miles distant. The chief commerce is in seal-skins, oil, and whalebone, and a profitable contraband trade is carried on with China and the South Sea islands. See *New Holland*.

Bourbon, an island belonging to France, in the Indian ocean, about 400 m. E. Madagascar. It is 48 miles long, and 36 broad, containing 2,500 sq. miles, and is composed of two mountains. In the smallest or southern one, volcanic fires are still raging. Coffee has long been the staple product of Bourbon. The tobacco grown here is of a good quality. The forests contain wood fit for ship-building; also aloes, ebony, palm, with a variety

of trees that afford odoriferous gums and resins. Earthquakes are unknown here; but it is subject to violent hurricanes, which injure the crops, often throw down houses, root up trees, and occasion the destruction of shipping. The population in 1811, was 60,346, of whom 16,400 were whites and the rest free negroes and slaves. Lon. 55° 20' E. Lat. 21° S.

Bordeaux, city, and s-p. France, cap. of Gironde, on the left bank of the Garonne, 16 leagues from its mouth. It has a university founded in 1441; an academy of arts and sciences, instituted in 1712, which has a library of 20,000 volumes; and an academy of painting, sculpture, and architecture, founded in 1670.

The inland commerce, carried on through the Garonne and Dordogne, is very extensive; and the maritime commerce is, next to that of Marseilles, the greatest in France. The tide rises to the height of 12 feet, so that large merchant vessels, and even frigates, can come up close to the town. It has an extensive trade in wine and brandy, with Britain, Ireland, Holland, Sweden, Denmark, the Hanse towns, and other northern states. The principal imports are, from England, woollen stuffs, tin, lead, coal, herrings, salted flesh, leather, dye stuffs, and different kinds of provisions; from Holland, Denmark, and Sweden, staves, deals, timber for ship building, hemp, pitch, copper and cheese. The intercourse with the United States is very frequent, and is yearly on the increase. 325 m. S. W. Paris. Lon. 0° 33' 59" W. Lat. 44° 50' 15" N. Pop. 92,374.

Brainerd, Missionary station of the American Board of Missions in Chickamaugah, a district of the Cherokee nation, 30 m. from the N. W. corner of Georgia in an easterly direction, 2 within the chartered limits of Tennessee, 250 S. E. Augusta, 150 N. W. Nashville, 110 N. E. Knoxville. It stands on the western side of the Chickamaugah creek, a navigable water of the Tennessee, 15 miles from its mouth. The establishment was made in 1817, and has been remarkably prospered. In 1822, 29 boys and 18 girls had left the school who could read and write; and the number of scholars then in school was 100, of whom all are boarded, and many clothed, at the expense of the mission. The buildings consist of a dwelling house, with appendages for the accommodation of the family, 2 school houses, 1 for the boys and 1 for the girls, several cabins used as dwelling houses, a grist-mill, saw-mill, blacksmith's and carpenter's shops. A farm of about 50 acres is brought under cultivation, and already such is the progress of the Cherokees in agriculture, that they furnish most of the means of subsistence to the mission. In the burying-ground is the grave of the Rev. Dr. Worcester, late Corresponding Secretary to the board, who died here June 7th, 1821.

Brandenburg, Mark, or *Marquisate of*, the most important of the Prussian states, and the basis of the monarchy, has Brunswick and Hanover on the W. Mecklenburg and Pomerania on the N. the grand dutchy of Posen on the E. and Silesia, with a part of Saxony, Anhalt, and Magdeburg, on the S. It is divided into the electoral and the New Mark; the former comprehends the Old Mark, the Priegnitz, the Middle mark, and the Ucker Mark. The principal towns are, in the Old Mark, Stendal; in the Middle Mark, Berlin, Brandenburg, Potsdam, and Frankfort on the Oder; in the Ucker Mark, Prenzlau; in the New Mark, Custrin, and in the Mark of Priegnitz, Perleberg. The majority of the inhabitants are Lutherans, the remainder Calvinists. Pop. in 1801, including the military, 1,100,000. The arts and sciences are more cultivated here than in any other part of the Prussian monarchy. Berlin is both the residence of the court and the centre of literary establishments.

Brandywine, creek, Delaware, rises in Chester co. Pa. and running E. of S. 45 miles, passes by Wilmington and falls into the Delaware 2 miles below. It abounds with fine mill seats, the descent of the river being 300 feet in the course of 25 miles. It is navigable for vessels drawing 8 feet water to the mills 3 miles from its mouth. A mile above its mouth it receives Christiana creek from the west. The Brandywine flour mills form

the finest collection in the United States. In 1815, they were 14 in number, capable of grinding annually 500,000 bushels. Above the flour mills other improvements are made, extending 4 or 5 miles along the river; among these are several large cotton and woollen manufactories, a large manufacture of gunpowder, a paper mill, snuff mill, &c. A battle was fought at a place called Chadd's ford on this river, between the British and Americans, Sept. 11th 1777, after which the Americans retreated.

Brazil, a country of S. America, which including Portuguese Guiana, is bounded N. by Spanish Guiana, French Guiana, and the Atlantic Ocean; E. and S. E. by the Atlantic; and W. by Buenos Ayres, Peru and New Granada. It extends on the coast, from the mouth of the Oyapok in lat. 4° N. to lat. $33^{\circ} 3'$ S. The area is estima-

ted at 2,200,000 square miles, or nearly one third of South America. Beside the above territory, the Portuguese have recently taken possession of all that portion of Buenos Ayres, lying south and east of the Parana, and extending on the coast to the mouth of the Plata, but their right to this country has never been acknowledged.

Portuguese Guiana includes nearly all the part north of the Amazon. The rest of the country is divided into 12 provinces, called capitancias, viz. Para, Maranhão, Ceará, Pernambuco, Bahia, Minas Geraes, Rio Janeiro, St. Paul, St. Catharina, Rio Grande, Goiás, Matto Grosso.

A ridge of mountains, termed the Brazilian Andes, runs parallel to the coast, at no great distance, from 12° to 32° S. lat. with the steepest side towards the sea, and sloping more gradually towards the interior. In the west, the country again rises, and by gentle gradations attains to the height of from 3,000 to 5,000 or 6,000 feet above the level of the sea, where it spreads out into those barren and sandy plains known under the name of *Campas Paraiso*, which occupy the very centre of South America around the sources of the Tapajos and the head waters of the Madeira. Nearly the whole of Brazil is covered by a vast and impenetrable forest, scarcely 20,000 square miles out of the 2,200,000 which it contains being as yet brought under cultivation. This immense wilderness is traversed by the principal tributaries of the Amazon and La Plata, whose head streams are separated from each other by the Andes of Chiquitos which winds its way irregularly from east to west through the very heart of the country, between 10° and 20° S. lat. The climate of Brazil in the northern part of the Amazon is intensely hot, but is tempered by the humidity of the atmosphere and by copious dews. In the south it is temperate and sometimes even cold. The country is healthy. The rains commence in March and continue till August. The soil, so far as it has been explored, is extremely fertile and well watered. The productions are cotton, sugar, coffee, tobacco, and fruits in the northern provinces; the southern produce wheat and other European grains, and innumerable herds of cattle. The forests abound with varieties of useful and beautiful wood for dyeing, cabinet work, or ship-building. But the most precious productions of Brazil are diamonds and gold, which are chiefly found in the beds of the mountain torrents, or in deep vallies, in a stratum of rounded pebbles or gravel, from which they are separated by washing. What is termed the Diamond district, extends about 50 miles from north to south, and 25 from east to west around the sources of the Rio Francisco and Rio Grande in the capitania of Minas Geraes. This territory is under military government, and guards are stationed on all the roads to examine travellers, and detain persons suspected of smuggling diamonds. No one is allowed to enter the Diamond district without the permission of the governor. The person who is detected in smuggling, is punished with the confiscation of his whole property and exile to Africa, or with imprisonment, sometimes for life. The average quantity of diamonds obtained in this district, may be estimated at from 20,000 to 25,000 carats annually, which are sent under a military escort to Rio Janeiro, and there lodged in the royal treasury. The collection of diamonds now in possession of the king of Portugal, is the finest in the world, and is supposed to

exceed in value three millions sterling. The largest diamond ever found in America, weighing almost an ounce, is one of the collection. The population is estimated at 2,400,000, of whom one sixth are supposed to be whites of Portuguese origin, one half negroes and mulattoes, and the remainder independent Indians. Brazil is a Portuguese colony, governed by a viceroy. In the year 1806, when Portugal was invaded by the French, the royal family, to escape the impending danger, removed to Brazil and established their government at Rio Janeiro, which continued for 14 years to be the capital of the Portuguese possessions in both hemispheres. The king has now returned to Europe, and Brazil is reduced to its former state of colonial dependence on the mother country. The religion is Roman Catholic, under one archbishop and eight bishops. The commerce of Brazil was formerly subjected by the Portuguese government, to all the usual restraints imposed by the colonial system of Europe. But after the emigration of the court to Rio Janeiro, the old restrictions were done away, and a commercial treaty was concluded with Great Britain, by which all the ports of the country were opened to British vessels and produce, on payment of a duty of 15 per cent. British manufactures of every description are now imported to a great extent. Portugal continues to send oil, wine, brandy, linens and cottons. From the United States are imported flour, salted provisions, household furniture, and naval stores. India and China goods are also in great plenty. The principal exports are cotton, coffee, sugar, tobacco, and Brazil wood from the northern provinces; gold and diamonds, from the middle; and wheat, hides, horn, hair and tallow from the southern. The chief towns are Rio Janeiro, St. Salvador, and Pernambuco.

Bremen, a dutchy in the kingdom of Hanover, between the Weser and the Elbe, having Hadeln on the N. and Luneburg with Verden on the S. It contains 2,200 square miles, and 168,504 inhabitants.

Bremen, one of the four free cities of Germany, lies on both sides of the Weser, near the centre of the kingdom of Hanover. It was formerly a leading member of the Hanseatic league, and has had, since 1529, a celebrated academy, partly Lutheran, partly Calvinist. The harbor is at a place called Elfsleth, 6 miles nearer the sea. The trade of Bremen is extensive, and is in part founded on its manufactures of refined sugar, cotton, woollen cloths, dye stuffs, &c.; but chiefly on the exportation of the products of the country on the Weser, and the importation of such foreign goods as find a market in these parts of Germany. The city contains 37,400 inhabitants, or including the annexed territory of 77 sq. miles, 48,500. 54 m. S. W. Hamburg. Lon. $8^{\circ} 48' 3''$ E. Lat. $53^{\circ} 4' 45''$ N.

Bristol, city, and county, Eng. between the counties of Gloucester and Somerset, on the river Avon, which is navigable for ships of great burden down to the Severn, four miles distant, where commences the Bristol channel. The harbour formerly labored under serious inconveniences, ships being left aground at the retreat of the tides, which here rise to the height of 40 feet; but since 1803 extensive works have been erected, at an expense of nearly £600,000, by means of which every difficulty has been removed, and merchant ships of all burdens now lie constantly afloat, and enter or leave the harbor at any time of the tide. The houses in the older parts of the town are built principally of wood, and are crowded together in narrow, irregular streets, but those of more recent erection, particularly towards the suburbs and outskirts, consist of brick and stone, and are disposed in spacious streets and squares. All bulky articles are conveyed through the city on sledges, carts not being admitted for fear of damaging the arches of the vaults and sewers which are made under all the streets. There are 18 churches, all of them neat and beautifully decorated, besides numerous meeting-houses, and places of worship for dissenters of almost every denomination. Several of the buildings for commercial purposes are elegant edifices, and the city has long been famous for its numerous and well conducted charitable institutions. Among the manufacturing establishments, are 20 glass houses, 18 sugar refineries, and numerous distilleries. Its brass works are the most extensive in England. Bristol has long been engaged in a very extensive foreign trade, though it has not made such rapid advances as many other ports, and particularly its great rival, Liverpool. Its foreign connections are chiefly with the West-Indies; and its commerce with Ireland is also very extensive. Its internal commerce is carried on by means of the Severn, and the numerous canals with which it is connected. About a mile west of Bristol, close to the river, is the village of the Hot Wells, celebrated for a warm Spring, which has been found a powerful remedy in various diseases, and is much resorted to by invalids, and the fashionable. Pop. of the city, 76,433, but including the out-parishes, 100,000. 117 m. W. London.

Bristol Bay, on the W. coast of N. America, formed by the Peninsula of Alaska on the S. and Cape Newnham on the N. Lat. $58^{\circ}20'$ N.

Bristol Channel, between the S. coast of Wales, and the counties of Somerset, Devon, and Cornwall, in England.

Britain, commonly called *Great Britain*, lies between 50° and $58\frac{1}{2}^{\circ}$ N. lat. It is bounded N. by the North sea, E. by the German ocean, S. by the English channel, and W. by St. George's channel and the Atlantic. From N. to S. it extends about 580 miles; its greatest breadth from the North Foreland in Kent, to the Land's End in Cornwall, is about 370, and it contains 87,502 square miles.

The northern part of the island is mountainous. The principal minerals are coal, iron, tin, copper, and lead. The annual value of the mineral products of Great Britain and Ireland, is computed at £9,000,000: and the annual value of the fisheries at £1,500,000. The manufactures comprehend every variety of fabric; particularly, wool, cotton, linen, silk, leather, glass, pottery, iron, and the various metals. In 1814, the amount of foreign wool imported was 15,712,517 pounds, and the value of woollen goods exported, £8,404,481. The commerce of Britain consists almost wholly in the exchange of her manufactures for the rude produce of Europe and America. In 1815, the value of the exports was £60,983,894. The revenue in 1816 was 67,926,899*l*. During the late war the army amounted to 640,500 men, and the navy consisted of more than 1,000 ships, manned by 184,000 seamen. The population in 1811, including the Hebrides, Orkney, and Shetland islands, was 12,596,803; families 2,544,215, of which 1,129,049 were employed in trade, manufactures, or handicraft, 895,998 in agriculture, and 519,168 in other ways. Total pop. in 1821, 14,379,677.

Colonies in all quarters of the world are dependent on the British islands. Of these, the principal are two military posts in Europe: Gibraltar and Malta; in Asia, the whole Indian peninsula, from about 23° N. lat. to Cape Comorin, the island of Ceylon, New Holland, and others in the Eastern and Southern oceans; the Canadian territories, Newfoundland, and West India islands in America; the Cape of Good Hope, *Serre Leone*, and Goree, in Africa. The population of the British islands and their dependencies is calculated to exceed 60 millions of men; of whom about 40 millions inhabit the Eastern hemisphere.

Britain, New, isl. in the Eastern sea. Lon. $148^{\circ}5'$ W. Lat. $6^{\circ}50'$ S. It is separated from New Ireland on the north by a narrow channel.

Britain, New. The country lying round Hudson's bay, or the country of the Esquimaux, comprehending Labrador, New North and South Wales, has obtained the general name of New Britain, and is attached to the government of Lower Canada.

It is a dreary, desolate region. The surface to a great extent is naked rock. The climate is so cold, and the soil so barren, that nothing of the vegetable kind can flourish here. Wild animals are abundant. The principal are beavers, bears, deer, raccoons, and musquashes, and the fur trade is carried on with great spirit. On all the principal lakes, and at the mouth and forks of nearly all the considerable rivers, there are trading houses established by the English. Here the Indians bring the furs of the animals which they kill in hunting, and sell them for blankets, guns, powder, beads, &c. The trade is carried on by two companies of merchants: the *Hudson's Bay* company, and the *North-West* company. The trade of the former is confined to the neighbourhood of Hudson's bay; that of the latter extends from lake Winnipeg to the Rocky mountains and the Frozen Ocean. The North-West company is composed of Montreal merchants. The usual mode of travelling in this country is in birch bark canoes. With these the inhabitants pass up and down the rivers and lakes, and when they meet with a rapid, or wish to pass from one river to another, they get out of the canoe and carry it on their shoulders. In this way, the men engaged in the fur trade travel thousands of miles, and carry all their goods.

Brownsville, borough and p-t. Fayette co. Pa. on the S. bank of the Monongahela, at the junction of Dunlap's creek. The town is built on the side of a hill rising 300 feet above the river, and is regularly laid out. It contains a printing-press, a bank, 2 market-houses, and 3 churches, one each for Presbyterians, Episcopalians and Methodists. Pop. 976. Brownsville is in the vicinity of Laurel Hill, whence abundance of iron ore is obtained. It is well supplied with excellent coal, and, next to Pittsburg, is the most considerable manufacturing town in the western part of the State. Among the manufactories are a glass house, cotton manufactory; foundry, forges and furnaces for the manufacture of various articles of hardware; and a steel manufactory, capable of making annually 70 tons of steel. The river is navigable at this place for boats of 2 or 3 feet water, and steam-boats and other boats are built here for the navigation of the Ohio and Mississippi.

Bruges, a large and opulent city of Netherlands, situated in a spacious and beautiful plain, about 6 miles from the sea. It is intersected by a great number of canals. The principal are those leading to Sluys and Ostend. In the 14th century, it was one of the greatest places of commerce in Europe, forming an important branch in the Hanseatic confederacy; but towards the end of the 15th century it began to decline, and Antwerp became its rival. It still carries on a considerable trade with Ostend, Sluys, Ghent, and the North of Europe. The principal public buildings are the town-house, the exchange, and lycee, and the church of Notre Dame with its elevated spire; 12 m. E. Ostend, 22 N. E. Ghent, 33 N. E. Dunkirk. Lon. 3° 13' 33" E. Brunswick, dutchy of, or, as it is sometimes called, Brunswick-Wolfenbützel, to distinguish it

from Brunswick-Luneburg, consists of two narrow and detached territories, stretching from N. E. to S. W. in the southern part of the kingdom of Hanover, by which it is nearly surrounded. It contains 1,572 square miles, 209,600 inhabitants, and in the new constitution of Germany it has 2 votes in the general assembly, and, united with Nassau, 1 in the federative diet. Brunswick-Luneburg, was formerly an independent principality, but now forms a province in the kingdom of Hanover. See *Hanover* and *Luneburg*.

Brunswick, fortified t. and cap. of the dutchy, on the Ocker. Its celebrated *Collegium Carolinum* was founded in 1745; it has 20 professors and affords instruction in the languages, arts, sciences, and polite exercises. The principal manufactures are wool, yarn, linen, porcelain, pasteboard, and paper-hangings. The traffic in home produce, as well as the carrying trade, is of some consequence, and the great Brunswick fairs rank next to those of Leipsic and Frankfort. Pop. 29,650. 7 m. N. Wolfenbützel, 47 W. Bowdoin college in this town was incorporated in 1794. In 1822 it had a President and 4 professors, including 2 medical professors; 2 tutors; 167 students, including 49 medical students; a complete philosophical apparatus, and a library of about 5,000 volumes. The buildings are pleasantly situated on an elevated plain, commanding a view of the Androscoggin and the adjacent country. The college was endowed by the legislature of Massachusetts with five townships of land, and the sum of 3,000 dollars annually, in money. Since the separation of Maine from Massachusetts the legislature of the new State has continued the annual grant. The principal private benefactor of the college was the late Hon. James Bowdoin, whose donations amounted to 10,000 dollars.

Brunswick, (New), city, New-Jersey, Middlesex co. on the S. W. bank of the Raritan, 16 m. N. E. Princeton, 33 S. W. New-York, 57 N. E. Philadelphia. Lon. 74° 31' W. Lat. 40° 29' N. Pop. of the township, 6,764. It contains a court-house, jail, college edifice, and 5 houses for public worship, viz. 1 for Dutch Reformed, 1 for Presbyterians, 1 for Episcopalians, 1 for Methodists, and 1 for Baptists. The situation of the town is low, but not unhealthy.

Queen's college was founded in this city by ministers of the Reformed Dutch church, for the education of their clergy, and incorporated in 1770. In 1810, a Theological seminary was established in the city by the General Synod of the Reformed Dutch churches, and to a certain extent connected with the college. The two departments, however, are maintained wholly by different funds, and are amenable to different tribunals. The college edifice is of stone, 3 stories high, and unfinished. The exercises of the college have for some time been suspended, and the building appropriated to the accommodation of theological students. The library contains 700 or 800 volumes. The theological department has 2 professors, and about 15 students.

Brussels, city, Netherlands, in Brabant, partly in a plain, and partly on a hill at the foot of which flows the Senne. It is the richest and gayest city of Brabant, and one of the most splendid in Europe. In the great market place stands the Hotel de Ville, an old edifice in the Gothic style; with a turret 364 feet high, and surmounted by a gigantic figure of St. Michael, in copper, 17 feet high. The church of St. Gudule is a magnificent structure, adorned with beautiful paintings. The chapel of Notre Dame is likewise an elegant building, and the church of the Capuchins was one of the finest that order possessed in Europe. There are several elegant mansions belonging to noblemen, most of which contain valuable paintings; but the chief ornaments of Brussels, are its public walks, no city in Europe possessing one superior to that which is called the "Green Alley," or to the great interior square called the "Park," which is a kind of public garden intersected by beautiful alleys, bordered with trees and ornamented with a number of statues of white marble. The public fountains are 20 in number, and are all embellished with sculptures.

The manufactures of this city are celebrated throughout Europe, particularly its lace, camlets and carpets; the first alone employs nearly 10,000 individuals. Brussels is also celebrated for its manufacture of carriages, which, for cheapness and elegance, surpass those of London and Paris. The city carries on considerable trade, not only with the interior of the Netherlands, but with foreign countries, by means of the canals which bring it into communication with the Scheldt. Brussels

Buenos Ayres, a country of South America, bounded N. by Peru; E. by Brazil; S. E. by the Atlantic Ocean; S. by Patagonia, and W. by the Andes, which separate it from Chili and Peru. The desert of Atacama, lying along the coast between Peru and Chili, is also included in this country, which makes the Pacific ocean the western boundary for nearly 300 miles. It extends from 14° to 38° 30' S. lat. a distance of more than 1,700 miles, and the number of square miles is computed at 1,300,000. The chain of the Andes runs from south to north along the whole western boundary, and the country for several hundred miles to the east of the Andes is generally mountainous; the territory east of the rivers Paraguay and Parana is a fine, waving, well watered country; the intermediate district, lying between these rivers and the mountains, and extending from north to south through the whole length of the country, consists of extensive plains. In the north these plains are elevated, and during the rainy season are in many parts liable to be overflowed; in the south they are called Pampas, and are remarkably dry and destitute of trees. One of the Pampas commences near the banks of the Parana, and extends beyond the southern boundary into Patagonia, being about 1,500 miles long, and 500 broad. The soil is fertile, and owing to the variety of climate, capable of producing all the common fruits and vegetables of the temperate and torrid zones. Hitherto, however, it has been appropriated chiefly to pasturage. The province of Paraguay produces that singular herb called matte or paraguay tea, which, being prepared by boiling it in water like common tea, makes the favorite beverage of the inhabitants, and is extensively used in various parts of South America. Large quantities of it are annually exported to Peru and Chili. In the mountainous districts along the Andes, almost every town and valley from Mendoza to La Paz, has had, or now has some productive mine in its neighbourhood. A short time since there were 73 mines in actual operation within this country, viz. 30 of gold, 27 of silver, 2 of tin, 7 of copper and 7 of lead. The richest of these are the celebrated silver mines of Potosi, which from their discovery in 1545 till 1803, have yielded £237,358,334 sterling, or nearly £1,000,000 annually which has paid the royal duties. Salt is found in the extensive plains lying between the Paraguay and the mountains. The pampas to the southwest of Buenos Ayres, also contain lakes which produce salt of a very fine quality. According to the official estimates furnished in 1817 by the government of Buenos Ayres to the deputies of the United States, the

population was 1,300,000, exclusive of Indians. The civilized Indians alone, it is supposed, amount to more than 700,000. The population is composed of whites, Indians, mestizoes, negroes, and mulattoes. The number of negroes and mulattoes is very small. The most populous districts are around the towns on the coast and near the mouths of the great rivers, and the mining districts in the west, but particularly the northwestern provinces near the borders of Peru, which were formerly attached to that country and are still called Alto Peru, or Upper Peru. The plains in the north are almost exclusively occupied by tribes of wandering Indians.

Buenos Ayres was formerly a Spanish colony, under the government of a viceroy, but a new government was established in 1810, which ruled in the name of the king of Spain till the 9th of July 1816, when it declared itself wholly independent, under the title of the United provinces of Rio de la Plata, which has since been changed for that of the United Provinces of South America. Since 1810 there have been three or four revolutions, in each of which the form of government, so far as relates to the executive department, has been altered. During all the changes, however, there has existed a congress consisting of representatives from the several provinces. The revenue for the year 1817, was 3,037,187 dollars. Since the revolution many reforms have been introduced. The law of primogeniture is repealed, and all titles of nobility are prohibited under pain of the loss of citizenship. One of the first decrees of the congress manumitted the offspring of slaves born after February 1813, and emancipated all slaves imported after that period. The Roman Catholic is the established religion, but there are many advocates, both in conversation and writing for universal toleration. The number of monks and nuns was never very great in Buenos Ayres, when compared with other portions of the Spanish dominions, and they have diminished since the revolution. The herdsmen or peasantry of the Pampas form a very considerable proportion of the population. Thinly strewed over the great plains, they have commonly, each one, the charge of a country many leagues in extent; they are wholly illiterate, and dwell on an immense waste in continual solitude. From infancy the herdsman is continually on horseback, and there is perhaps no more expert horsemen in the world. The wars that have been recently carried on in this country have called these herdsmen into the field of battle, and it is said, they make the most formidable partisan soldiery that ever existed. In courage they are inferior to none; and in adroit and rapid horsemanship they exceed what has been told of the Parthian, the Scythian or the Cossac of the Don. They are usually called *Guachos*, an epithet, like that of Yankee, originally cast on them in derision, but now no longer offensive. One of the principal branches of internal commerce is the trade in mules, which are sent in droves from Salta over the Andes into Peru. The exports consist, principally, of hides, beef, and tallow, the great staples of the country; a variety of furs and peltry; with gold, and silver from the mines of Potosi. The imports are principally British manufactures, consisting of woollen and cotton goods of every description, hardware, hats, porter, &c.; from the United States are imported lumber, and naval stores of all kinds, salted fish, furniture,

boots, shoes, &c. and from Brazil, sugar, coffee and rum. The value of the exports is estimated at \$10,000,000 per annum; and that of the imports is about the same. The principal rivers of Buenos Ayres are the Paraguay or Plata, Parana and Uruguay. This country is divided into 8 intendancies: viz. Buenos Ayres, Paraguay, Cordova, Salta, Potosi, Charcas, La Paz and Cochabamba.

Buenos Ayres, city and capital of the above is built on the S. W. bank of the Rio de la Plata, 180 miles from its mouth. The river here is 30 miles broad, and is merely an open road. Ships cannot approach within three leagues of the shore, and are compelled to unload by lighters, and to resort to the bay of Barragan, 23 or 24 miles below, to wait for their cargoes. The navigation of the Plata to Buenos Ayres, is extremely dangerous, owing not only to rocks, sand banks, and shallows, which abound in many parts of the river, but likewise to the impetuous blasts, called *Pamperos*, which occasionally sweep over it with destructive fury. The town is regularly laid out, the streets intersecting each other at right angles. In the middle of the town is a large area, 40 rods square, on the sides of which are the castle, the cathedral, and the town hall. All these edifices, together with the churches, convents and hospitals, are built of a beautiful white stone, found in a plain near the town. The population is estimated at 62,000, one half of whom are whites, and the rest, Indians, negroes, mulattoes, and mestizoes. The commerce of the town is very extensive, the port being the outlet for the produce, not only of the whole valley of the Plata, but also of large districts of Peru and Chili. Lon. 57° 24' W. Buffalo, p-t. port of entry and cap. Niagara co. N. Y. at the outlet of Lake Erie, 22 m. S. Niagara falls, 80 N. E. by E. Erie, 240 E. Sandusky, 302 E. Detroit, 222 N. N. E. Pittsburg, 291 W. Albany. Pop. 2,095, of whom 1,100 are in the village. Here is a bank. Being situated on the best channel of intercourse between the Atlantic and the regions of the West, Buffalo is destined to become a great emporium of trade. The town is built on the N. E. side of Buffalo creek, a considerable mill stream which joins the lake half a mile below. The depth of water in Buffalo creek is sufficient for a harbor, being 12 or 14 feet for a mile from its mouth, and the breadth from 12 to 16 rods. Its only obstruction is the sand and gravel at its mouth, driven in by gales of wind. To prevent the sand from thus accumulating, a pier of 1000 feet in length is now erecting, which is so far completed (1822) that vessels drawing 6 or 7 feet water enter the harbor. Buffalo was burnt by the British during the late war, but has been since rebuilt.

Bukarest. See *Bucharest*.

Bukharia, *Bukhara*, or *Bokhara*, said to signify the *Country of Learned Men*, a country of Asia, whose limits are not exactly defined by modern geographers. It is commonly called Great Bukharia, in contradistinction to a country called Little Bukharia, which bounds it on the east. On the N. and W. it seems to be bounded by Karasm and Turkestan, and on the S. by Persia and Northern Hindostan. It extends, according to the

most accurate estimate, about 700 miles from N. to S. and 350 from E. to W. It is believed to be divided into three provinces (though they are certainly not ruled by the same government,) Bukharia proper, Samarcand, and Bulkh. The country is watered by the Sihon on the N. the Amu, or Oxus on the S. and the Sogd. It is inhabited by two distinct races of Tartars, one called Tadjiks, Tadjiks, or Kirghises, and the other, Usbecks, a principal tribe of Tartars. This country was called by the ancients *Sagdiana*.

Bukharia, *Bokhara*, or *Bogar*, a city of Asia, cap. of Great Bukharia, on the Sogd, a branch of the Oxus, 50 miles from its mouth. It has long been celebrated for the study of theology and Mahometan law. The inhabitants are employed in the manufacture of cotton yarn, calicoes and soap, which are chiefly exported to Persia. Merchants of all kinds meet with great encouragement, and all religions are tolerated. The population is supposed to exceed 100,000. Lon. 62° 45' E. Lat. 39° 27' N.

Bukharia, *Little*, a country of Asia, no better known to Europeans than Great Bukharia. It appears to lie amidst deserts, and is bounded N. and E. by Mongolia, S. by Thibet, and W. by Great Bukharia. The productions of the country are gold, silver, and all sorts of precious stones, which are sent to India, China, and Tobolok in Siberia. The Bukharians are Tartars and Mahometans. This country formerly consisted of 2 kingdoms, Kashgar in the west, and Kalis in the east. Since 1759, the whole has been tributary to China. The principal towns are Yarkand and Cashgar. Burgundy, *Circle of*, one of the ten circles of the German empire. Originally it was very extensive and comprised, beside the free county (*Franche Comté*) of Burgundy, the whole 17 provinces of the Netherlands; but after the Dutch provinces declared their independence, and the southern part of the circle was gradually acquired by France, it consisted only of the Spanish or Austrian Netherlands.

Burgundy, *Dutchy of*, otherwise called *Burgundy Proper*, or *Lower Burgundy*, to distinguish it from *Franche Comté* or *Upper Burgundy*, formerly a province in the east of France. The principal product of the country is its wine, which is known and esteemed throughout Europe. At the revolution it was divided into the departments of the Saone and Loire, the Cote d'Or, and the Yonne; part of it also lies in those of the Nièvre, the Aube, the Upper Marne, and the Ain. The principal towns after Dijon, are Macon, Autun, Chalons sur Saone, Auxerre, and Sena.

Lon. 73° W. Lat. $44^{\circ} 29'$ N. Pop. in 1810, 1,690. The village is one of the handsomest in the state. It occupies the side of a hill, ascending near a mile from the bay. Here are two handsome Congregational meeting-houses, a courthouse, jail, academy, and a spacious college edifice. Within the limits of the township, a mile N. E. of the village, are the falls of Onion river, around which are several valuable mills and manufacturing establishments. About 20 vessels navigate lake Champlain, most of which are owned in this place.

The University of Vermont is located in this town. It was incorporated in 1791, and has been liberally patronized by the state. It has a president, 5 professors, 2 tutors, a library of about 1,000 volumes, and a philosophical apparatus which is tolerably complete. The funds consist principally of lands, amounting to about 40,000 acres, and yield at present an income of about 1200 dollars. The number of students in 1818 was 28. The college edifice is a beautiful brick building, 160 feet long, and 4 stories high. It is finely situated on the E. side of the village, a mile from the lake, and elevated more than 300 feet above its surface. From the top of the college there is a noble view of the lake and the adjacent country.

Cabron, *Cape*, St. Domingo. Lat. 19° 23' N.

Cabul, *Caubul*, or *Cabulistan*, sometimes called *Afghanistan*, is a country of Asia, bounded N. by Independent Tartary, from which it is separated by the Hindoo Coosh and Parapomisan mountains; E. by Hindostan, from which it is separated by the Indus; S. by Beloochistan: and W. by Persia. Besides the country included within these boundaries, the province of Balk in Tartary, Cashmere and several other countries on the east of the Indus, and a part of Beloochistan are in a greater or less degree dependent on the king of Cabul. In its greatest extent the kingdom stretches from 24° to 37° N. lat. and from 60° to 77° E. lon. and contains according to Hassel more than 800,000 square miles. The Hindoo Coosh and Parapomisan mountains run along the whole northern frontier. A branch of the Hindoo Coosh, called the ridge of Solimaun, proceeds in a southerly direction and sinks gradually into the plains of Sinde, at the mouth of the Indus. These two ranges, with branches striking off from them, traverse nearly the whole kingdom, except the tracts near the southern and western frontiers which are occupied by vast plains and sandy deserts. The climate exhibits the most striking varieties, in consequence of the abruptness with which the mountain ranges often rise from the deep plains beneath. A few hours journey carries the traveller from a place where snow never falls to another where it never melts. In some of the plains persons are often killed by the intensity of the hot wind, while regions of eternal ice are towering above. The soil is nearly as various as the climate. In well watered plains of moderate elevation, as those of Peshawer and

Candahar, it is exceedingly fertile and produces two crops in the year. The loftier part of the mountain chains is of course condemned to perpetual ruggedness and sterility, while in the level districts of the south and west extensive deserts are produced by the absence of water. Agriculture is followed with assiduity. The grand process upon which its success depends is that of irrigation, which is practised in every part of the kingdom. Wheat and barley are the staple productions. Fruits and vegetables of various kinds are also abundant. The population of the kingdom and its dependent territories, according to Elphinstone, is 14,000,000, of which number 4,300,000 are Afghans, 1,400,000 Belooches, 1,200,000 Tartars, 1,500,000 Tadschiks and Parsces, and 5,700,000 Hindoos. The Afghans are the ruling people, and the khan of their principal tribe is the king of the whole country. The government, however, is by no means of that simple structure which is usual in Asiatic monarchies. Over the great towns, indeed, and the country in their immediate vicinity, the authority of the sovereign is direct and almost supreme, but the rest of the nation is divided into tribes, each under its own khan, who is nearly independent. Alliances are formed and wars carried on by the different tribes between themselves, without any concern or interference of the sovereign. This form of government keeps every part of the country in a state of continual tumult and ferment. The army of the king is estimated at 150,000 or 200,000 men, principally cavalry, but his ability to raise this number depends on the co-operation of the different tribes.

Cadiz, (an. *Gaidar* and *Gaides*.) city, Spain, 45 m. N. W. Gibraltar, 60 S. W. Seville. It stands on the island of Leon, at the extremity of a long tongue of land, projecting in a N. W. direction. The town is walled and on three sides surrounded by the sea, whilst strong fortifications across the isthmus secure it from attack by land. The bay of Cadiz is a vast basin, inclosed between the continent and the projecting tongue of land, and is one of the finest bays in the world, being more than 30 miles in circumference, with excellent anchoring ground, while the neighbouring mountains protect it to a considerable extent from the winds. It is defended by four forts, and is the grand rendezvous of the Spanish navy. On an island in the bay there are twelve docks, and a grand arsenal with ample supplies of naval stores. The streets are narrow, but clean, well paved, and well lighted. The town and the country seats in its neighbourhood make a beautiful appearance from the harbor. The manufactures of Cadiz are insignificant, but the commerce is very extensive. It has long been the chief commercial town in Spain, and particularly the centre of trade with America and the West Indies. Large quantities of salt are made in the neighbourhood for exportation. The population is estimated at 70,000 souls, many of whom are Irish, Italian, French, English, and Dutch. One of the great inconveniences in Cadiz is the want of good water. Lon. 6° 17' 22" W. Its trade consists principally in stuffs of Turkish manufacture, and in wine, rice, and coffee. The strait of Caffa, otherwise called the Cimmerian Bosphorus or the strait of Jenicale, is a narrow channel that joins the sea of Asoph to the Black sea. Lon. 35° 12' 45" E. Lat. 45° 6' 30" N. Pop. 80,000.

Caffria, or *Kaffraria*, territory, South Africa, extending along the coast in a N. E. direction from the Great Fish river which separates it from the colony of the Cape of Good Hope, to the Key's river, which divides it from the country of the Tambookies. The name, however, is sometimes applied to all that part of South Africa which is not included in the colony of the Cape of Good

Hope; the tribes which inhabit this country, so far as Europeans are acquainted with them, being mostly of Kaffer origin. The principal tribes known to Europeans in Caffraria taken in its largest sense, are the Kaffers, Boshuanas, Damaras and Tambookies. The *Kaffers*, or inhabitants of Caffraria proper, differ in every respect from the bordering race of Hottentots. There is not perhaps in the world a finer race of men as to external figure; they are tall, robust, muscular and handsome. Though black, or very nearly so, they have not a line of the African negro, either in their countenance or persons. They are more addicted to agriculture than the Hottentots, but pasturage is the favourite and general occupation. Their general habits are peaceable, but with the savage Bosjesmans they are frequently at war. They have had occasional contests with the colonists, but the blame is said commonly to have been with the latter; and when victors, they have never been guilty of any cruelty. European mariners shipwrecked upon their coast have been treated with the greatest humanity.

Cairo, or *Kahirah*, the metropolis of Egypt, and the centre of its commerce, stands near the east bank of the Nile, with which it is connected by a canal. Lon. 31° 19' 43" E. Lat. 30° 2' N. The streets are winding and narrow, and are not paved. Contrary to the general custom of the east, the houses have two or three stories, over which is a terrace of stone or tiles. They have the air of prisons; for they have no light from the street, and it is extremely dangerous to have many windows in such a country. The edifices on which architectural ornament have been chiefly bestowed are the mosques, of which the city contains 300, and the tombs of the mamelukes.

The castle of Cairo is built on a hill to the south of the city; but this hill being commanded by one adjoining is of no value as a fortification. From the top of it however, there is a most delightful prospect of Cairo, the Pyramids, and all the surrounding country. The well in the castle, commonly called Joseph's Well, is about 270 feet deep in the solid rock; and there is a passage down by steps carried round the well.

The commerce of Cairo is very extensive. Through it the various productions of Asia and the East Indies, and partly also those of Europe, are transmitted into the vast regions of interior Africa. The communication with the interior of Africa is chiefly maintained by three caravans, which go to Sennaar, to Darfur, and to Mourzouk. The returns are made in gold, ivory, senna, gums, hides, and above all in slaves. Specimens of almost all the native tribes of the continent, are to be seen in the slave market at Cairo. The trade with Europe is carried on wholly by the channel of Alexandria. Pop. 300,000.

Calcutta, city, Bengal, and capital of all the British possessions in Hindostan, stands on the E. bank of Bhagirutti or Hoogly river, about 100 miles from the sea. Opposite to the town there is good anchorage for ships of 500 tons burden, but larger vessels are obliged to stop at Diamond harbor, about 50 miles down the river. Fort William stands on the side of the Ganges, and commands the river. It is so extensive as to require in case of a siege a garrison of 10,000 or 15,000 men.

Calcutta is inhabited by merchants of all countries of the world, and by 500,000 natives. The houses belonging to the English, are well built of brick, and many of them more resemble the palaces of monarchs than the houses of merchants. The habitations of the natives are in general of one story, and built of earth. This city is the grand emporium of the east. Its commerce is very extensive in sugar, salt, opium, silks, muslins, calicoes, &c.; the value of which is nearly 10 millions per annum.

It is the seat of the metropolitan, who, under the title of bishop of Calcutta, has the superintendence of all the ecclesiastical affairs of India. An institution called the Asiatic Society was established here by Sir William Jones, and a college founded at Fort William by the Marquis Wellesley, in which are professors of English, Mahome-

tan and Hindoo laws, history, geography, natural history, &c. In 1816 a college was established by the Hindoos for the instruction of their sons in the English and Indian languages, and in the literature and science of Europe and Asia. This institution was projected and is superintended and supported by the Hindoos themselves. More recently still, a Mission college has been established under the direction of the bishop of Calcutta, which has been generously endowed with 15,000*l.* by three religious charitable societies in Great Britain. One principal object of the mission college is to prepare the natives, and others to become preachers, catechists, and schoolmasters. The Baptists and several other denominations have missionaries in this city. The environs of Calcutta are occupied by gardens and country houses, many of which are pleasantly situated. In 1802, the population was estimated at 500,000, and within a circuit of 20 miles, at 2,225,000. Lon. 88° 28' E. Lat. 22° 34' N.

California, *Old*, a province of Mexico. It is a peninsula, extending from the bay of All-Saints in lat. 32° to cape St. Lucas in lat. 22° 48' N. and bounded N. by New California, E. by the gulf of California, and W. by the Pacific. A ridge of mountains runs through the centre of the peninsula. The soil is generally barren. The Jesuits made the first establishments here in 1742. Since their expulsion, the Dominican monks of the city of Mexico have had charge of the missions. The country contains 55,000 square miles, but in 1803 only 9,000 inhabitants. The population has much diminished within the last 40 years, owing to the ravages of the small-pox.

California, *New*, a province of Mexico, which extends from the isthmus of Old California; or the bay of Todos Santos, to Cape Mendocino, in N. lat. 40° 19'. It is a narrow tract of country, 600 miles long and contains 16,000 square miles. The soil is as well watered and fertile, as that of Old California is arid and stony. The climate is more mild than in the same latitude on the eastern coast. Good wine is now made in most of the villages established by the Spaniards along the coast S. and N. of Monterey, to beyond 37° N. lat. The European olive is also successfully cultivated in several of the settlements. The country abounds in fish and game of every description: hares, rabbits and stags are very common; seals and otters are also found in prodigious numbers. There are 18 missionary settlements, formed by the Spaniards on the coast, which, within a few years, have made great progress in population. Including the Indians who were settled and had begun to cultivate the fields, the population in 1790 was 7,748, and in 1802, 15,562, of whom 1,300 were whites, mestizoes, and mulattoes.

Cambridge, t. Eng. cap. of **Cambridge co.** is situated on the **Cam**, 17 m. S. **Ely**, and 51 N. **London**. Lat. 51° 12' N. Pop. 11,108. It is divided into 14 parishes, and has 14 churches, besides 4 meeting-houses for dissenters. Cambridge is chiefly celebrated for its university, which was founded sometime previous to 1229. It consists of 13 different colleges, 4 halls, the schools, the public library, and the senate-house. The schools, which occupy three sides of a small court, were commenced on their present site in 1442, but were not completed till 1470. The public library is calculated to contain nearly 100,000 volumes. The senate-house, where degrees are conferred, and other public business of the university transacted, is a handsome building of **Portland stone**. The colleges have been founded at different periods during the six preceding centuries, and are very unequal in extent and decoration. 1. **St. Peter's** or **Peter House**, was founded in 1284. 2. **Clare Hall**, in 1326. 3. **Pembroke Hall**, in 1343. 4. **Corpus Christi**, **Benit**, or **Benedict College**, in 1356; though a mean edifice, one of its libraries, consisting of **Saxon** and old **English manuscripts**, is much celebrated. 5. **Trinity Hall**, in 1350. 6. **Gonville** and **Caius College**, in 1348. 7. **King's college**, the chapel of which is said to be the most magnificent structure of the kind in Europe, was founded by **King Henry VI.** in 1441, but not completed before the reign of **Henry VIII.** 8. **Queen's College**, in 1448. 9. **Catharine Hall**, in 1475. 10. **Jesus College**, in 1496. 11. **Christ College**, in 1506. 12. **St. John's College**, in 1509. 13. **Mary Magdalen College**, in 1542. 14. **Trinity College**, by **King Henry VIII.** in 1540; here there is a library which ranks among the first in **Great Britain**, for its collection of printed books, manuscripts, **Roman antiquities** and natural curiosities. 15. **Emanuel College**, in 1584. 16. **Sidney Sussex College**, in 1593. 17. **Downing College** was founded in the year 1807, in pursuance of the will of **Sir George Downing**, made 1717. He died in the year 1747; but the fund for the en-

dowment of the college, which now produces about 6,000*l.* being burdened with survivorships, and subject to a long litigation, the erection of the edifice was postponed.—The university enjoys many privileges, and is entitled to send two representatives to parliament. The whole number of fellows belonging to the university, previous to the foundation of Downing College, was 406, and of scholars 666, besides 236 inferior officers and servants, who are maintained on the various endowments.

It contains the colleges, a court-house, county jail, State arsenal, and 4 houses for public worship, viz. 2 for Congregationalists, 1 for Episcopalians, and 1 for Baptists. The courts of the county are held alternately here and at Concord. The court-house and jail are at the S. E. extremity of the town, on Lechmore's point, which approaches within a mile of Boston, and is connected with it by a bridge over Charles river. There is another bridge connecting this point with Charles town. The village of Cambridgeport, which lies west of Lechmore's point, is connected with Boston by a bridge called West Boston bridge.

In this town is Harvard College, or the University of Cambridge, the oldest and most wealthy literary institution in the United States. It was founded in 1638, in less than 20 years after the first settlement of New-England. Its officers in 1821, were a president, 20 professors, 5 tutors, an instructor in French and Spanish, a proctor, and a regent. The library is the largest in America, containing upwards of 25,000 volumes. The philosophical and chemical apparatus are complete. There are belonging to the University, a valuable cabinet of minerals, an excellent anatomical museum, and a Botanic garden containing 8 acres, and furnished with an extensive collection of trees, shrubs, and plants, both native and foreign. The college buildings consist of the University hall, which is an elegant stone edifice, containing the chapel, dining halls, and lecture rooms; Harvard hall, containing the library, philosophical apparatus, museum, &c.; 4 spacious brick edifices, containing rooms for students; and several other buildings, for the accommodation of the president, professors, and students. An astronomical observatory is about to be erected on an extensive scale. A Law school, Medical school, and Theological seminary, form part of the University. The whole number of students in 1821 was 374, of whom 29 were Theological students, 53 Medical students, 13 Law students, and 277 undergraduates. The whole number who were educated here from the establishment of the institution to the year 1818, was 4,662, a greater number than at any other college in the country.

Canada, an extensive country in N. America, was formerly called the province of Quebec, but since 1791 it has been divided into two provinces, called Upper and Lower Canada.

Canada, Lower, lies between 45° and 52° N. lat. and 63° and 81° W. lon. It is bounded N. by the territory of the Hudson's Bay company, or East Maine; E. by the gulf of St. Lawrence, and part of the Labrador coast; S. by New Brunswick, Maine, New-Hampshire, Vermont, and New-York; and W. by Upper Canada, from which it is separated principally by the Ottawa river, and a line drawn from the head of the river in Lake Temiscaming due N. to Hudson's bay. It is divided into the districts of Montreal, Threc Rivers, Quebec, and Gaspe, which were subdivided by a proclamation of the government in 1792, into the following 21 counties, namely, Bedford, Buckingham, Cornwallis, Devon, Dorchester, Effingham, Gaspe, Hampshire, Hertford, Huntingdon, Kent, Leinster, Montreal, St. Maurice, Northumberland, Orleans, Quebec, Richelieu, Surrey, Warwick, and York. The minor divisions are, 1st, The seigniories, or the original grants of the French government under the feudal system, which were again partitioned out into parishes by the French government. 2d, The townships or grants of land made by the English government since the year 1796, in free and common soccage.—The climate is congenial to health in an eminent degree. Heat and cold are indeed felt in their extremes, but they are not oppressive. The cloudless sky and pure dry air of winter, makes the cold both pleasant and healthful. No general description will convey an adequate idea of the soil of Lower Canada. In the part of the province south of the St. Lawrence, a triangular district, included between the northern boundaries of Vermont and New-Hampshire, the St. Lawrence and the Chaudiere, consists of excellent land laid out

in townships and in many parts settled and cultivated, and bids fair to become the most flourishing part of the province; from the Chaudiere to the sources of the St. John, the land is much broken and of an indifferent quality; from the sources of the St. John to the gulf of St. Lawrence, the country has been but partially explored but has every appearance of sterility. On the north side of the St. Lawrence, a ridge of heights commences at the eastern extremity of the province, and runs along the margin of the river from 64° to 71° W. lon; it then leaves the river, and taking a S. W. direction strikes the Ottawa river about 38 leagues above its confluence with the St. Lawrence, enclosing within it and the two rivers, a beautiful country, well watered and level. On the N. side of the ridge just described, lies the remaining part of Lower Canada, which has been so little explored that it is only known to be covered with immense forests. The population of Lower Canada has rapidly increased within a few years. In 1759, when it was conquered from the French, it was estimated at 70,000; in 1775, it had only increased to 90,000; but in 1820, the Catholic population was 333,900, Protestants about 40,000, Quebec 14,000, Montreal 12,000, making a total of about 400,000. The government is in the hands of a governor, lieutenant-governor, executive council, who are appointed by the king; and a house of assembly, who are representatives of the people.—The prevailing religion is Roman Catholic; of this persuasion there is a Bishop of Quebec, a coadjutor, with the title of Bishop of Salde, nine vicars general, and about 200 curates and missionaries, spread over the different districts of the province. The revenues of the Catholic clergy are derived in part from grants made of land to them under the ancient regime. The spiritual concerns of the protestants are under the guidance of the Lord Bishop of Quebec, 9 rectors, and a competent number of other clergymen, who are supported in part by annual stipends from the government, and the appropriation of one seventh of all granted lands.

Canada, Upper, is bounded N. by the territory of the Hudson's bay company; N. E. and E. by Lower Canada; S. E. and S. by the United States; on the W. and N. W. no limits have been assigned to it. It is divided into 8 districts, viz. the Eastern, Johnstown, Midland, Newcastle, Home, Niagara, London, and Western. These are again subdivided into 23 counties, and 159 townships. The townships contain in all 9,694,400 acres, of which 3,000,000 are granted in free and common soccage, 2,769,828 are reserved for the crown and clergy, and 3,924,572 still remain to be granted. These townships are laid out along the banks of the St. Lawrence, Lake Ontario, Lake Erie and Lake St. Clair, and extend back for a distance, varying from 40 to 50 miles. The soil throughout is scarcely excelled by any portion of N. America. In the rear of the townships are large tracts of land stretching far to the north, covered with immense forests, and little known except to the Indians; but it has been ascertained that there are many large tracts of rich soil. The climate is salubrious. The winters are shorter and milder than in Lower Canada. The spring opens usually from 6 weeks to 2 months earlier than at Quebec. The population of Upper Canada has increased with great rapidity. In 1783, it did not exceed 10,000 souls, and in 1814 it was 95,000. It is made up, principally, of emigrants

from the United States, and a few British, Irish, and Scotch. Of the 3,000,000 acres granted to settlers, the quantity under tillage in 1815, was estimated at 290,000, dispersed over the different districts. The most populous and improved part of the colony, is along the banks of St. Lawrence river, and the eastern part of Lake Ontario.—The government of Upper Canada is administered by a lieutenant-governor, (who is almost always a military officer,) a legislative council, an executive council, and a house of assembly. The legislative council consists of not less than 7 members, of which the chief justice of the province is president, and wherein the Bishop of Quebec has a seat; the members are appointed by mandamus from the King, and hold their seats, under certain restrictions, for life. The executive council is composed of 6 members; the chief justice is president, and the bishop of Quebec likewise has a seat in it. The house of assembly is composed of 25 members, who are returned from the 23 counties; the duration of the assembly is limited to 4 years. The civil and criminal law is administered by a chief justice and 2 puisne judges. There is a court of king's bench, common pleas, and a court of appeal. The expense of the civil list is defrayed by Great Britain.

For the defence of the two Canadas, a regular military establishment is maintained by the British government, which was estimated in 1815, at from 27,000 to 30,000 men. The river St. Lawrence is the only channel, by which the commodities of these two provinces have hitherto found their way to the ocean. The principal exports consist of oak and pine timber, deals, masts, and bowsprits, spars of all denominations, staves, pot and pearl ashes, peltry, wheat, flour, biscuit, Indian corn, pulse, salt provisions, fish, and other miscellaneous articles, which employ generally about 150,000 tons of shipping. In return for these are imported, wines, rum, sugar, molasses, coffee, tobacco, salt, coals, and manufactured produce from Great Britain. The commerce of Canada has been progressively increasing, since it became a British province. In 1769, the annual value of its exports amounted to 163,105*l.* and it employed 70 vessels. In 1797, the exports amounted in value to 491,419*l.* and the imports to 338,214*l.* In 1808, the exports were 1,156,060*l.* and the imports 610,000*l.*

Lat. 12° to 15° N.

Canard, Isle au, in the St. Lawrence, at the confluence of the river des Prairies.

Canaries, a group of islands in the Atlantic, near the W. coast of Africa. They are 13 in number, of which the largest are Teneriffe, Grand Canary, Fuerteventura, Palma, Ferro, Gomera, and Lancerota. The group was celebrated in antiquity, under the appellation of the Fortunate islands. They lie between 27° 39' and 29° 26' N. lat. and between 13° 20' and 18° 10' W. lon. The aspect of all these islands is elevated and full of mountains, some of which, particularly the Peak of Teneriffe, rank among the loftiest on the globe. The sides of the mountains which incline towards the west and north, make a profuse display of vegetation, and exhibit, rising above each other, the plants of the torrid, the temperate, and even the frigid zone. The most verdant and fertile islands are Grand Canary and Teneriffe; Lancerota and Fuerteventura are dry and sandy. The most valuable production of the Canaries is wine, of which Teneriffe yields from 20,000 to 24,000 pipes, 8000 or 9000 of which are exported. They produce wheat sufficient for their own consumption; also maize, potatoes, and French beans. The other chief objects of trade are brandy, archil, and soda.

These islands belong to Spain and the present inhabitants are entirely of European origin. They are estimated at 160,000. They are of a roving and enterprising disposition, which impels them to emigrate; and they have established themselves in all the Spanish settlements in the New World, and in the East Indies.

Canary, Grand, the largest and most fertile of the group of the Canaries. It is about 30 miles long by 28 broad. The whole island consists in a manner of one mountain, which rises to a great height, and the summit of which is covered with perpetual snow. The lofty central parts of the island contain copious springs of pure water,

which flow down in rivulets through the valleys, and preserve almost uninterrupted verdure and fertility. There are two, sometimes even three, harvests in the year, of wheat and maize. The population is stated by Humboldt, after Ledru, at 50,000. Palmas is the only large city. Lon. $15^{\circ} 23'$ to $15^{\circ} 51'$ W. Lat. $27^{\circ} 45'$ to $28^{\circ} 13'$ $30'$ N.

Canton, city, China, cap. of Quang-tong, on Peking or Canton river, which is navigable 300 miles farther into the interior. The river is covered by innumerable boats for four or five miles, containing whole families that have no other residence, and seldom visit the land. They are ranged in parallel rows, with a narrow interval between each line to admit the passage of other vessels. Canton is surrounded by walls about five miles in circuit, on which cannon are mounted. The suburbs are very extensive; strangers may frequent them, but they are not permitted to enter the city without the permission of a mandarin. The streets are long and paved, and for the most part, kept exceedingly clean. In general, the houses are of brick, one story high. The factories of the different European powers, extend along the banks of the river. The streets of Canton are continually crowded by its numerous population. It is a place of very great trade, and the only port of the whole Chinese dominions which is open to Europeans. Vast quantities of merchandize are continually exported and imported by the Chinese themselves, in the traffic with various eastern nations, and a very extensive commercial intercourse is now carried on by Europeans, especially the British. The principal exports of the latter are tea, to the extent of from 25 to 30 millions of pounds yearly, nankeen, silks, mother of pearl, tortoise shell, tutenague, China-ware, and many other articles: while the imports from Great Britain, and her eastern settlements, are woollen cloths, cotton, opium, betel-nut, furs, and watch-

es. The management of the trade of Canton is vested in a council called *hong*, consisting of from 12 to 14 members, generally men of great wealth. All foreign cargoes pass through their hands, and they also provide the cargoes to be exported. The Chinese pretend that it is entirely from favour to foreigners that they permit any traffic with their empire. Pop. variously estimated from 1,500,000 to 2,000,000. Since 1807, the London Society have had a missionary in Canton, who has been employed in translating the Bible into Chinese, and several editions of the New Testament have been published and circulated, but the labours of the missionary are much restricted by government. Cape Hope, the N. W. point of Martha's Vineyard, Mass. on which is a light-house.

Cape of Good Hope, cape and settlement of S. Africa, now belonging to the British, is bounded N. and E. by Caffraria, S. by the Indian ocean, and W. by the Atlantic ocean. It is nearly 600 miles long from east to west, and on an average about 200 broad. The area is estimated at 120,000 sq. miles. The leading feature in the aspect of this territory consists of three successive ranges of mountains, running completely across the country from east to west, almost parallel to each other, and to the southern coast. The first range is at the distance of from 20 to 60 miles from the coast. The second range, called the *Zwarte Berg*, or *Black mountain*, is considerably higher and more rugged than the first. The belt interposed between the *Zwarte Berg* and the first range is nearly of the same average breadth as that be-

tween the first range and the sea, but is of considerably greater elevation. Beyond the Zwarte Berg, at an interval of 80 or 100 miles, rises the Nieuweldt mountains, the highest range of southern Africa, and the summits of which are supposed to be 10,000 feet above the level of the sea. They form the northern boundary of the colony. The belt or plain interposed between these two last chains is considerably more elevated than either of the other two, so that this country forms as it were a succession of terraces, rising above each other. The plain next to the sea is covered with a deep and fertile soil, watered by numerous rivulets, well clothed with grass, and with a variety of trees and shrubs. The second terrace contains a considerable proportion of well watered and fertile lands; but these are mixed with large tracts of the arid desert, called Karroo. The third belt, called the Great Karroo, is almost entirely a vast desert. The grounds in the city of Cape town, for 20 or 30 miles in every direction, are employed almost entirely in raising wine and fruits; beyond this limit, for 50 or 60 miles, grain is raised in large quantities and of a very superior quality: the more remote parts of the colony are devoted to pasturage. Tobacco and many other plants thrive perfectly and might be cultivated to a great extent. Pop. in 1810 estimated at 81,000, of whom one third were whites and the rest negroes or Hottentots. The free inhabitants may be divided into 4 classes, viz. the inhabitants of the capital, wine growers, corn farmers, and graziers. The wine boers reside in the immediate vicinity of Cape town, and are the most civilized and comfortably situated of the peasantry. Most of them are descended from French families, by whom the vine was first introduced. The corn boers live generally at the distance of two or three days journey from the cape. Their agriculture is miserable, but the soil is fertile, and notwithstanding their slovenly management, they are generally in good circumstances. The grazier is much more uncultivated than the other classes. Many are perfect Nomades, wandering from place to place, and living in straw huts like the Hottentots.

The chief town is Cape town. The principal rivers are the Great Fish, Sunday and Orange.

The United Brethren established a mission among the Hottentots in 1736, which was renewed in 1792, and since that time the London Missionary Society have sent out many missionaries. The labors of both have been attended with the happiest effects. The Hottentots, at the several settlements now cultivate the fields, own large numbers of cattle, exercise various trades, and contribute liberally to the support of religious and charitable institutions, exhibiting a wonderful proof of the power of Christianity to elevate men from the lowest point of intellectual and moral depression. Their principal stations are at Gnadenenthal and Bethelsdorp.

This colony was originally planted by the Dutch, but in 1806 it fell into the hands of the British, and was confirmed to them in 1815 by the Congress of Vienna. Its principal importance in a commercial view is derived from its convenience as a place of refreshment to vessels sailing between Europe and the East Indies. It also consumes British manufactures to a large amount. The value of merchandize imported into the colony from Great Britain in 1809, was £311,016. The principal exports are wine and brandy. Cape town, the cap. of Cape of Good Hope colony, is agreeably situated at the head of Table bay, about 30 miles N. of the Cape. The town is defended by a castle of considerable strength, but it is commanded by higher grounds in the vicinity. The harbour is safe during 8 months of the year; but during the remaining four, when the N. W. winds prevail, ships are obliged to resort to False Bay on the other side of the cape. The town is regularly laid out in streets intersecting each other at right angles. There are 1,145 houses, inhabited by about 5,500 whites and people of colour, and 10,000 blacks. The town is well supplied with excellent water. Lon. 18° 23' E. Lat. 34° 6' N.

Carabaya, or *Carabaia*, province of Peru, bounded E. by Larecacha, W. by Quispicanchi, N. and N. W. by the territories of the Indians, S. W. by the province of Canes and Canches, and S. by Lampa and Asangaro.

Caraccas, or *Venezuela*, a country of S. America, which including Spanish Guiana extends from the Caribbean sea on the N. to the Portuguese dominions on the S. and from New-Granada on the W. to the river Essequibo which separates it from English Guiana on the E. It lies between 6° 41' and 12° N. lat. Area 511,324 sq. miles.

The northern part of the country is mountainous. A branch of the Andes, called the chain of Venezuela, runs along the whole northern coast and terminates opposite the island of Trinidad. Below the mountains, there are immense plains which stretch south beyond the Orinoco, and west into New-Granada. In the rainy season the Orinoco overflows its banks, and these plains are inundated to a vast extent.—In the low country the climate is hot, but in the mountains very pleasant and healthy. Earthquakes are common in some parts. The soil is very fertile. The mountains are covered with forests of most valuable timber; the vallies between the mountains contain the principal plantations, and produce cocoa, indigo, cotton, sugar and tobacco, in abundance; the plains furnish immense pastures for numberless herds of cattle. Tribes of independent warlike Indians occupy the country about the mouths of the Orinoco, the whole coast from the Orinoco to the Essequibo, the country west of Lake Maracai-bo, and the whole interior of Spanish Guiana. By means of the Orinoco and its tributary streams, all the country south of the mountains enjoys an easy communication with the sea. This river forms a natural channel for the conveyance to the ocean of the cattle and produce raised on the banks of the Apura and its wide spreading branches. By means of the Meta also, a navigable communication is opened into New Granada, almost to the very foot of the Andes. The flour, and other productions of an extensive district near Santa F'e de Bogota, are conveyed to market by the Orinoco in preference to the Magdalena. The population in 1801, according to the estimate of Depons, was 728,000, of whom about 136,000 were whites, 218,000 negro slaves, 291,000 freed men,

and the remainder Indians. In 1822 the whole population may be estimated at more than 1,000,000, without including the tribes of independent Indians. Most of the Indian tribes in this country have been brought into subjection to the Spaniards. The principal remaining unsubdued are the *Goahiros*, the *Guaranos*, and the *Caribs*. Previous to the late revolution Caraccas was a colony of Spain, and the government was entrusted to a captain-general, who resided at Caraccas. In 1811 the inhabitants revolted from the Spanish yoke, and declared themselves independent. The mother country, however, afterwards succeeded in establishing her authority, but the revolutionists have recently again expelled the royal troops, and Caraccas is now united with New Granada under one government, and the whole country constitutes the Republic of Colombia. The principal exports are cacao, indigo, tobacco, coffee and cattle. The imports are manufactured goods of almost every description. The contraband trade is carried on to such an extent by the foreign colonies in the neighborhood, that it is impossible, from the custom-house returns, to form any estimate of the real value of the imports or exports. The Dutch in Curacao have been engaged in this trade for nearly two centuries, and the English have recently prosecuted it very extensively from Trinidad, Jamaica, and Guiana; and such are the facilities afforded by the vicinity of these colonies, by the long extent of coast, and by the navigation of the Orinoco, that the government find it wholly impossible to suppress it.

Caraccas, city, S. America, and capital of the country described in the preceding article, is in a valley, between two mountains, a few leagues from the coast, elevated 2,900 feet above the level of the sea. It contains a university and several churches, hospitals, and monasteries. The population, according to the returns in 1802, was 42,000. On the 26th of March, 1812, this city was partly destroyed by an earthquake, and 12,000 persons were buried in the ruins. The port of Caraccas, named Guayra, has bad anchorage, but by the construction of a mole the road is good. Lon. 66° 46' W. Lat. 10° 30' N.

Carnatic, a province extending along the E. coast of Hindostan, about 560 miles long, by from 50 to 100 broad, comprehending what lately form-

ed the dominions of the nabob of Arcot. The climate is liable to excessive heats, especially during summer. On account of the extreme scarcity of water, large tanks or artificial ponds have been constructed in many places. The country is also liable to frequent famines. Most of the inhabitants are Hindoos: Mahometans and Christians forming but a small proportion of the population. The principal towns are Arcot, Cuddalore, Madras, Madura, Ongolo, Pondicherry, Tanjore, Tinnevely, Trichinopoly, and Vellore. In 1801 the whole territory, with the exception of a small portion reserved by the nabob, was ceded to the British, who divided it into eight districts.

Carniola, formerly a province of the Austrian empire, with the title of duchy, bounded N. by Carinthia, N. E. by Styria, E. and S. E. by Croatia, S. by Dalmatia and the Adriatic, and W. by Istria, Friuli, and the county of Goritz, containing 4,700 square miles, with a population in 1807, of 409,504. It formerly formed with Styria, Carinthia, Friuli, and the territory of Trieste, the division of the empire called *Inner Austria*, but since 1816, it has composed the circles of Laybach, Neustadt, and Adelsburg, in a new division of the empire called the kingdom of Illyria. See *Illyria*.

This province contains a number of iron mines. Quicksilver is found near Ostraga; and the famous mines of that metal at Idria may likewise be considered as belonging to this province. Cinnabar is obtained in the county of Gomor, to the amount of 6,000 or 7,000 cwt. per annum. The inhabitants are for the most part of Slavonian extraction and are called by the Germans Wenden, or Vandals. The number of pure Germans does not exceed 30,000.

Carolina, La, t. Spain, in Andalusia, 20 m. N. E. Anduxar. Lon. $3^{\circ} 36' 13''$ W. Lat. $38^{\circ} 17' 5''$ N. Pop. about 3,000.

Carolina, (North,) one of the U. S. bounded N. by Virginia; E. by the Atlantic; S. by S. Carolina and Georgia, and W. by Tennessee. It extends from lat. $33^{\circ} 50'$ to $36^{\circ} 30'$ N. and from lon. $75^{\circ} 45'$ to 84° W. and contains 48,000 square miles.

Along the whole coast of N. Carolina is a ridge of sand, separated from the main land, in some places by narrow Sounds, in others by broad Bays. The passages or inlets through it are shallow and dangerous, and Ocracoke inlet is the only one north of Cape Fear, through which vessels pass. In the counties on the sea coast, the land is low, and covered with extensive swamps and marshes, and for 60 or 80 miles from the shore is a dead

level. Beyond this, the country swells into hills, and in the most western part rises into mountains. Among the productions are pitch pine, cotton, tobacco, wheat, rye, barley, oats, hemp, and Indian corn. Coal has lately been found in Chatham county, and lead ore a few miles N. of Raleigh. The principal rivers, beginning in the east, are the Chowan, Roanoke, Pamlico, Neuse, Cape Fear, Yadkin, Catabaw, and Broad. Most of the produce of North Carolina is exported from the neighbouring states. Not a single point has yet been found on the coast, within the limits of the State, at which a safe and commodious port could be established. Hitherto the productions of the northern parts of the State, lying on the Roanoke and its branches, and also on the upper parts of the Tar and Neuse, have been sent to the markets of Virginia; and the trade of Broad river, the Catabaw, and the Yadkin has gone to South Carolina. The principal exports are pitch, tar, turpentine, lumber, rice, cotton, tobacco, wheat and Indian corn. The value of the exports from the ports of North Carolina in 1820, was only \$808,319. The value of the manufactures in 1810 was estimated at \$6,653,152.

Since the year 1815, the state has been zealously engaged in the business of internal improvements. It is intended to improve the navigation of the inlets and sounds, so as to open a direct and easy communication with the ocean; to remove the obstructions in the navigation of the principal rivers; to connect the rivers by navigable canals; to improve the roads; and to drain the marshes and swamps of the eastern and southern counties. In the prosecution of these plans, skilful engineers have been employed for several years in making the necessary surveys, and several private companies have been formed under the patronage of the state. In 1819, the legislature appropriated for the purpose of internal improvements, the proceeds of the sale of all the Cherokee lands, which have lately come into possession of the state. The population in 1790, was 393,751; in 1800, 478,103; in 1810, 555,500; in 1820, 638,829, of whom 205,017 were slaves, and 14,612 free blacks. Engaged in agriculture 174,196, in commerce 2,551, in manufactures 11,844. The slaves are principally confined to the low country. The western parts of the state are settled by *Scotch-Irish* emigrants. Almost all the country between the Catabaw and the Yadkin is thus peopled. The *Moravians*, in 1751, purchased a tract of 100,000 acres, lying between the head waters of the Yadkin and the Dan, and it now contains a number of flourishing villages. Within a few years, there has been much zeal displayed in the establishment of academies and schools. Previous to 1804, there were but 2 academies in the state. The number at present is 50, and is rapidly increasing; and there is a flourishing university at Chapel Hill, called the University of North Carolina. The Methodists and Baptists are the prevailing denominations of christians, especially in the low country. The Scotch-Irish are Presbyterians, and there are also in the western parts of the state a few settlements of German Lutherans and German Calvinists. The legislative power is vested in a general assembly, consisting of a senate and house of commons. The senators are chosen annually, one from each county. The members of the house of commons are chosen annually, two from each county, and one from each of the six principal towns. The executive

power is vested in a governor, and a council of 7 persons, all of whom are chosen annually by a joint ballot of the two houses. Raleigh is the seat of government.

Carolina, (South,) one of the U. S. bounded N. and N. E. by North Carolina; S. E. by the Atlantic; and S. W. by Georgia, from which it is separated by Savannah river. It extends from lat. 32° to $35^{\circ} 8'$ N. and from lon. $78^{\circ} 24'$ to $83^{\circ} 30'$ W. containing 24,000 square miles. Pop. in 1790, 239,073; in 1800, 345,591; in 1810, 415,110, and 1820, whites 243,244; slaves 251,783; free blacks 6,714; total 502,741; engaged in agriculture 161,560, in commerce 2,588, in manufactures 6,488.

The sea coast is bordered with a fine chain of islands, between which and the shore there is a very convenient navigation. The main land is naturally divided into the Lower and Upper country. The low country extends 80 or 100 miles from the coast, and is covered with extensive forests of pitch pine called pine barrens, interspersed with swamps and marshes of a rich soil. After leaving the low country in proceeding into the interior, you first pass through a region of little sand hills, resembling the waves of the ocean in a high sea. This curious country, sometimes called the middle country, continues for 50 or 60 miles, till you arrive at the *Ridge*, which is a remarkable tract of high ground as you approach it from the sea, but level as you advance from the N. W. Beyond this ridge, commences a fine healthy country of hills and dales, terminating in the western extremity of the state, in lofty mountains.—The banks of the large rivers and the creeks in the low country, are bordered with a belt of excellent land, producing cotton and maize in abundance; the marshes and swamps in this district make fine rice plantations; and some of the low grounds between the sand hills in the middle district, are suitable for agriculture and pasturage: but with these exceptions, the whole country below the Ridge has a sandy barren soil, not worth cultivation. The soil of the upper country is generally strong and productive.—Cotton and rice are the staple productions of the state. The climate and soil are well adapted to tobacco, grain, and indigo, and these were formerly cultivated to a great extent; but since the invention of the machine to cleanse upland cotton from its seeds, the cultivation of cotton has become so profitable, that almost every thing else is neglected.

The climate of the Upper country is healthy at all seasons of the year. In the low country, the summer months are sickly, particularly August and September and at this season the climate frequently proves fatal to strangers.—The principal rivers beginning in the N. E. are the Pedee, Santee, Cooper, Ashley, Edisto, Combahee, and Savannah.—There is a canal, 22 miles long, connecting Santee and Cooper rivers, by which the produce of a large section of this state, and of the western part of N. Carolina, is brought to the city of Charleston.

South Carolina college, at Columbia, has been liberally patronized by the state. Colleges have been also incorporated in Abbeville district, in Beaufort and in Winnsborough, but they have not taken a higher rank than academies. Free schools are established throughout the state, and the sum of \$30,000 annually, has been appropriated by the legislature, for their support.—The most nume-

rous religious denominations are Methodists and Baptists. Next to them are the Presbyterians and Episcopalians.—The legislature consists of a senate and house of representatives. The senate is chosen every four years, and the representatives every two years, by districts. The governor is chosen every two years by a joint ballot of both houses.

In 1820, South Carolina was the third State in the Union, in the value of her exports. The amount was \$8,882,940, and consisted almost wholly of domestic produce. The staple of the State is cotton. The other articles are rice, lumber, pitch, tar, turpentine, &c. A large part of this produce is exported in ships, belonging to the merchants of the northern States. Charleston is the largest town in the State, and the centre of its commerce. Columbia is the seat of government.

Carthage. The remains of this great city, the ancient emporium of northern Africa and empress of the sea, are situated on a promontory 12 miles E. N. E. of Tunis, but can now scarcely be distinguished by a superficial observer. The harbor has been filled by the action of the winds and a change in the bed of the river which fell into it. There are no remains of the ancient walls, arches or pillars. The cisterns, however, still remain almost entire, and are on a magnificent scale. The great aqueduct which brought the water from a distance of 50 miles, may be traced through the whole of its course.

Cashgar. See *Kashgar*.

Cashie, r. N. C. runs into Albemarle sound, near the mouth of the Roanoke.

Cashmere, a province of Hind. belonging to the Afghans; it is about 90 miles long, and nearly of an oval form, situated chiefly between 34° and 35° N. lat. and between 73° and 76° E. lon. It is a fertile valley, surrounded on all sides by mountains, which prevent communication except through seven passes. The mode of transporting goods through these passes, is on men's shoulders, the roads being impracticable either for horses, bullocks, or mules. There are guards posted at each of these passes, who examine all strangers; and no one is allowed to quit the country without a passport. Innumerable rivulets descend on all sides from the mountains, and after spreading verdure and fertility over every part of the valley, fall into the river Jhelum, which breaks through the mountains. From its elevated situation the climate of Cashmere is delightful, and the fruits and flowers of both zones are found in the greatest abundance. This beautiful valley was for a long time the favorite retreat of the emperors of Hindostan during the hot months of the year, and the oriental poets vie with each

other in celebrating its praises. The principal source of wealth of Cashmere is its delicate and unrivalled manufacture of shawls; the wool or hair of which the shawl is made, is produced by a goat found only in Thibet, from whence the Cashmere merchants are supplied with the wool. During the late revolutions in the Afghan government the governor of Cashmere revolted, and continues to maintain his independence. Its principal towns are Serinaghur and Islamabad.

Cashmere, called also Serinaghur, the capital of the above province, is in lon. $73^{\circ} 43'$ E. Lat. $34^{\circ} 20'$ N. on the Jhelum, over which there are five wooden bridges. Many of the houses are three stories high, and are principally built of wood. There are no public buildings of any consequence in the city, but in the environs there are the remains of several handsome palaces built by the emperors of Hindostan.

Cash river, N. W. Territory, runs into Lake Superior, 3 m. E. Dead river. It is 30 yards wide at its mouth.

Caspian Sea, an inland sea of Asia, bounded N. by Russia, E. by Tartary, S. by Persia. It is 646 miles long, from N. to S. and 265 in extreme breadth. The water is as salt as that of the ocean, and has a bitter taste. Numerous rivers run into the Caspian, and among them the Volga, the largest river in Europe, yet the lake has no visible outlet. The navigation of this sea is dangerous, owing to the numerous shallows. There are many ports, but few of which are safe and commodious for shipping. Sturgeon, salmon, and other fish are caught in great quantities, and a number of small vessels leave Astracan every season, for the seal fishery on the Caspian.

Cassina, or *Cashna*, an extensive kingdom of Central Africa, situated W. of Bornou, and extending S. to the Niger. Like most other states in this part of Africa, it is now tributary to Bornou. The commerce of Cassina with Northern Africa is maintained by a caravan from Fezzan. The exports consist of gold dust, slaves, cotton cloths, and goat skins dyed red and yellow. The imports are woollen stuffs, carpets, hardware, arms, knives, scissors, beads, mirrors, and toys. Cassina, the capital, is a city of great extent, but little is known respecting it.

Cassina, or *Red Cedar Lake*, N. America, one of the sources of the Mississippi river. It is about 8 miles long and 6 broad, and discharges itself by a winding stream 50 miles long into Lake Winnipeg. The waters of the Cassina are pure and transparent, and are supplied with pike, carp, trout, and catfish. It has an island covered with red cedar trees. Its shores are lined with the elm maple and pine, interspersed with fields of Indian rice, reeds and rushes, and here and there a gravelly beach. On the N. Castile, Old, an extensive province of Spain, inclosed between Arragon, New Castile, Estremadura, Leon, Asturias, Biscay and Navarre. Its form is that of an irregular triangle, whose extreme length is 60 leagues, and its breadth about 50. Burgos is the chief town. The wealth of Old Castile consists in its pasturage, which feeds thousands of sheep, cows, and other cattle. The merinoes after wintering in the plains, find in the mountains of this province a rich supply of food for the summer months. The commerce consists in the transport of wool, and this takes place chiefly by Burgos. Pop. 1,200,000.

Castile, New, a province of Spain, bounded N. W. and N. by Old Castile, N. E. by Arragon, E. by Valencia, S. E. by Murcia, and S. by Andalusia. The principal towns are, Madrid; Toledo, the provincial capital; Cuenca, the seat of a bishop, Ciudad Real, Seguenza, and Talavera de la Reyna. The residence of the court during the last three centuries has had a very evident effect on the improvement of Madrid, but very little on the province at large. The soil is naturally fertile, but the cultivation of it is neglected, and the mineral treasures of the mountains remain unexplored. The manufactures are woollen stuffs, silks, satin, and velvet, hats, soap, earthen ware, and cutlery. Pop. 1,200,000.

Castine, s-p. and cap. Hancock co. Maine, 122 m. E. N. E. Portland. Lon. 68° 46' W. Lat. 44° 24' N. Pop. 975. It is situated on a promontory nearly at the head of the east side of Penobscot bay. The harbor is excellent for any number of ships of the largest size, has bold water, and is accessible at all seasons of the year. Castine has great strength from its natural situation. From the narrowness of the isthmus which connects it with the main, it could be insulated without much labour or expense; and this mode of defence, in addition to strong batteries, would enable it to resist any force which would probably be brought against it. An enemy in possession of Castine has command of all the intermediate country from the Penobscot to the St. Croix. This place was taken by the British during the late war, but was restored on the return of peace.

Celebes, isl. in the E. Indian sea, of a very irregular figure, consisting of four long narrow peninsulas separated from each other by deep bays. The area is estimated at 90,000 sq. miles. The inhabitants are computed at 3,000,000. They are of Malay origin. They generally profess a corrupted form of the Mahometan religion. They are adventurous navigators, frequenting all places in the Eastern seas. Their piracies inspire dread among the neighbouring islanders. The trade consists in the exportation of gold, tortoise-shell, sago, rice, and cotton cloths, and in the importation of arms and ammunition, iron and steel, blue and white cloth. The island is called Negree Oran Buggess and Tanna Macassar, by the natives. It is partitioned into several political divisions, which are governed by different rajahs or chiefs, respectively independent in their own territories. Many towns are seen along the coast, of

which Macassar is the best known. Lon. 116° 40' to 121° 40' E. Lat. 3° N. to 5° 10' S.

Ceylon, a large island in the Indian sea, separated from the coast of Coromandel by a channel, called the straits of Manaar. Its general outline resembles the shape of a pear; its extreme length is about 300 miles, and its breadth 140. This island is named Cingala by the natives, who are thence denominated Cingalese. The climate in some parts, is hot and oppressive; in others more temperate and salubrious. The interior has a climate very destructive to Europeans. Great variety of minerals are found here, as tin, lead, iron in abundance, and quicksilver. Precious stones are probably more numerous and diversified than in any other part of the world. The most extensive pearl fishery on the globe is carried on in the straits of Manaar on the N. W. coast. The finest fruits grow on the island. Oranges, lemons, water melons, and cocoanuts, are plentiful, as also pepper, coffee and a species of the tea tree; but the most valuable of all the Ceylonese plants is the cinnamon tree, the principal plantations of which lie near Colombo. Snakes of an enormous size, and some, of the most venomous species, are found on the island. The elephants of Ceylon are highly celebrated for strength and

sagacity. The inhabitants seem to be of three distinct races, the Veddahs, or Beddahs, the native Cingalese, and the offspring of foreigners by alliances with the natives. Of the first, very little is known more than that they are a very wild people, subsisting chiefly by hunting and the spontaneous produce of the woods. The Cingalese have a language, and use characters peculiar to themselves.

The religion of Ceylon is the worship of Boodh. The number of native Protestants is about 150,000, and of Roman Catholics, 50,000. Formerly the number was much greater, but of late multitudes have relapsed into idolatry.

This island was visited by the Portuguese in 1505, who maintained their superiority here during 153 years, when they were expelled by the Dutch. The Dutch settlements were captured by the British in 1796, and the conquest of the island was completed in 1815, by the subjection of the king of Candy. See *Candy*. It is now constituted into one of the British governments of India. Pop. 1,500,000.

In 1816, the American Board of Commissioners for Foreign Missions established a Mission in the district of Jaffna, in the northern part of the island. In 1820, it consisted of 6 ordained missionaries, a physician, and a printer. It occupies two principal stations, Tillipally, and Batticotta, and has especially assigned to it six large parishes, with ancient buildings and lands devoted to religious use, and containing a dense Pagan population. It is advantageously situated for communication with the different parts of the island and with the populous provinces of Southern India, and for extensive and efficient operations.

The missionaries besides preaching the Gospel have established 15 free schools, in which about 700 children are instructed in the common branches of education, and the principles of Christianity. In addition to the free schools, there is, at each station, a boarding school, consisting of youths taken under the parental care of the missionaries, supported by the bounty of benevolent societies and individuals in America, and bearing names selected by the respective donors. In 1819, the number of pupils in the boarding schools was 48 males and 9 females. In no part of the heathen world, probably, can children be supported and educated so cheaply, as in this part of Ceylon. The small sum of 12 dollars is considered sufficient for the entire support of one boy, and boys can be obtained by the missionaries, to the extent of the funds with which they may be furnished.

Champlain, Lake, between New-York and Vermont. Its whole length from Whitehall, at its southern extremity, to its termination 24 miles N. of the Canada line, is 128 miles; its breadth varies from half a mile to 16 miles. Its surface covers about 600 square miles. The principal streams which flow into it from the east, are the Missisque, Lamoil, Onion, and Otter creek; those from the west are the Chazy, Saranac, Sable, the waters of Lake George, and Wood Creek. The whole extent of country drained by these waters, is between 6 and 7,000 sq. miles. There are several large islands in the northern part of the lake, the principal of which are North and South Hero, and Isle Lamotte. The outlet of the lake is the river Sorel, which runs N. into the St. Lawrence. About 800 tons of shipping are employed on the lake, owned principally at Burlington, and in the summer season a steamboat plies from Whitehall to St. John's through its whole length. A battle was fought on this lake on the 11th of Sept. 1814, in which the American fleet under Commodore Macdonough, gained a complete victory over the British.

Pop. in 1790, 16,359; in 1800, 18,712; in 1810, 24,711, of whom 11,668 were whites, and 13,043 blacks; in 1820, 24,780, of whom 12,652 were slaves.

It is built on the tongue of land between the rivers Ashley and Cooper, which unite immediately below the city, and form a spacious and convenient harbour communicating with the ocean at Sullivan's island 7 m. S. E. of the city. The harbour has a bar at its mouth, through which are two channels for sea vessels; the deepest has 16 feet of water at low tide. The harbour is defended by fort Moultrie on Sullivan's island, and forts Pinkney and Johnson.—Among the public buildings are a city hall, custom-house, theatre, orphan house, hospital, alms-house, 6 banks, and 19 houses of public worship; viz. 3 Episcopalian, 3 Presbyterian, 3 Methodist, 2 Independent or Congregational, 1 Lutheran, 1 Baptist, 1 French Protestant, 1 Friends, 1 Roman Catholic, a Mariner's church, a Jew's synagogue, and an Orphan-house church. The Orphan Asylum has grown up from small beginnings, to be the most respectable establishment of the kind on the continent. A large and handsome building has been erected, sufficiently spacious to accommodate 150 children. A chapel is connected with this institution, where all the christian clergy of the city perform divine service in rotation. Among other charitable societies are 2 for the relief of the widows and orphans of clergymen, one of which is formed by members of the Episcopal church, and the other by those of the Independent church; each of them has large funds.—The Library Society have a well chosen library of 13,000 volumes, which is increased annually by an importation of books to the amount of about 300*l.* sterling.—The 'South Carolina Academy of Arts' was formed in 1821 for the encouragement of the fine arts.—The city is regularly laid out in parallel streets, from 35 to 70 feet in width, running from river to river, and intersected by others at right angles. The new houses are of brick, and many of them are elegant. The commerce of Charleston is extensive and flourishing. It imports the foreign goods consumed in S. Carolina, a considerable part of N. Carolina and a part of Georgia. It is connected by a canal 22 miles long, with Santee river. In 1816 it was the fifth town in the United States in amount of shipping, the number of tons being 36,473. The city is regarded as more healthy than any part of the low country in the Southern States, and during the sickly months is the resort of the rich planters from the country and the West Indies. The citizens of Charleston have ever been distinguished for polished manners and unaffected hospitality.

Charlestown, p-t. Middlesex co. Mass. 1 m. N. of Boston. Pop. 6,591. The principal part of the town is beautifully situated on a peninsula formed by Mystic and Charles rivers, which unite immediately below in Boston harbour. A bridge across Charles river connects the town with Boston, and two others across Mystic river connect it with Malden, and with Chelsea. There is also a bridge across a bay of Charles river on the west side of the town, connecting it with Cambridge. The public buildings are the state prison, the Massachusetts Insane hospital, an alms-house, town-house, and 5 houses for public worship, 2 for Congregationalists, 1 for Baptists, 1 for Universalists and 1 for Methodists.—A navy-yard of the U. S. occupies the S. E. part of the town. It consists of about 60 acres of land, on which are erected a marine hospital, a spacious ware-house, an arsenal, powder magazine, and a house for the accommodation of the superintendent, all of brick; and 2 immense wooden edifices, under which the largest vessels of war are built. Cherbourg, an important seaport of France, in La Manche, on the N. coast, at the bottom of a large bay, between Capes La Hogue and Barfleur. It has long been considered by the French a station of great importance in the navigation of the English channel, and immense sums have been expended in improving the harbor. After several fruitless efforts, this object was at length accomplished in 1813, by an excavation from the solid ground of a harbor capable of containing 50 sail of the line. The excavation is 1,000 feet long, 770 wide, and 50 deep. A wet dock of equal dimensions was commenced by Bonaparte in 1813, and is now nearly completed, after having cost, along with the basin, a sum of nearly five millions sterling. Cherbourg is 190 m. W. Cherokee Agency, Tennessee, on the S. side of the Hiwassee, 36 m. E. N. E. Brainerd.

Cherokee corner, p-v. Oglethorpe co. Geo.

Cherokees, an Indian nation, whose territory lies principally within the chartered limits of Georgia, but also extends into N. Carolina on the E. and into Alabama on the W. and comprises that part of Tennessee which lies S. of Hiwassee and Tennessee rivers. The country is of an irregular form; the greatest length from N. E. to S. W. is about 200 miles and the greatest breadth 130, and it contains about 10,000,000 acres. The Alleghany range of mountains penetrates this country and gives rise to numerous streams, some of which flow N. into the Tennessee and Hiwassee, and some form the head waters of rivers flowing into the gulf of Mexico. The soil is fertile and the climate healthy. The Indians live scattered over the country in log cabins, not much inferior to those of the whites in the neighbouring settlements. Many whites reside among them having obtained the privileges of citizenship by marrying female natives. These intermarriages have been so long practised, that a considerable part of the tribe are of mixed blood. The mixed breed can generally speak English, and a few send their children to the white settlements for education. As to their persons, the Cherokees are well formed, and of a good appearance. Some of them have as fine countenances as can easily be found in any country. The children are almost universally active and healthy, and as apt to learn as the children of civilized people. Some of the half-breeds have large plantations, which they cultivate by the aid of slaves. In 1809, the number of the tribe was 12,395. They owned 6,519 horses, 19,166 black cattle, 1,037 sheep, 19,778 swine, 13 grist mills, 3 saw mills, 30 wagons, and 583 negro slaves; the whole value of which was es-

timated at 571,500 dollars. They had besides, upwards of 500 looms and 500 ploughs.

In 1817 the American Board of Foreign Missions established a mission among the Cherokees, and the success of this experiment fully evinces the practicability of inducing the Indian tribes to abandon the chase and adopt the modes of life of civilized society. The principal seat of the mission is at Brainerd, but schools have been established at Taloney, Creek path and various other places. The Moravians also have a respectable mission at Springplace and the Baptists another at Valley towns. With a view to the instruction of the Indians in the arts of civilization, the Government of the United States have extended their patronage to these missions; the expense of erecting a school-house and a dwelling house has been defrayed from the National treasury and \$1,000 a year is allowed to the station at Brainerd. The Cherokees have appropriated 100,000 acres of land for a perpetual school fund which is placed under the direction of the President of the United States. Besides being taught reading, writing, arithmetic, and the principles of Christianity, the children are instructed in the most useful arts of civilized life. The boys learn the use of the hoe and the axe, while the girls learn the use of the spinning wheel and the needle. Throughout the nation there is a general and strong impression in favour of having their children instructed; and were sufficient funds supplied, the greater part of the children might at once be brought under a system of instruction.

The Cherokees are governed by a National council who meet annually and consist of chiefs from the different clans. Recently they have begun to institute civil government among themselves. The country is divided into 8 districts or counties, to each of which a Judge and a Marshal are appointed, besides a Circuit Judge who presides over two districts.

Cherokees of Arkansas. Within a few years, a part of the Cherokees have migrated to the country on the Arkansas river, the government of the U. S. having assigned them lands on that river, in exchange for a part of the Cherokee country. The country ceded to these emigrants is as large, acre for acre, as that relinquished by them to the United States. It is bounded S. by the Arkansas river and N. by White river; the E. boundary is a line which commences at the mouth of Point Remove in the Arkansas, lon. 94° E. and proceeds northwardly to White river. The number of emigrants in 1819 was 6,000. The American Board have a mission among them at Dwight.

Cherson, t. Eu. Russia, capital of the government of Cherson, on the Dnieper, 60 miles from its mouth. It was founded in 1778, and was destined by the empress Catharine to become the Petersburg of the Black sea. But from the difficulty of navigating the Dnieper, and the unhealthiness of the climate, it gradually fell into decline, and is now completely eclipsed, by the neighbouring port of Odessa; but extensive works are still carried on in the dockyards and arsenal of Cherson. In 1788, the population was about 50,000. In 1803, not above 11,000. The government of Cherson contains 26,532 square miles, and above 400,000 inhabitants. 128 m. S. W. Ekaterinoslav. Chicago, river, or arm of Lake Michigan, at its S. end, in Illinois. A mile from the lake it divides into two channels: the N. channel extends along the west side of the lake, about 30 miles; the S. is only 6 miles long, and affords a secure harbour for

vessels of almost any burden, but has a bar at its mouth with only two feet water. This obstruction might be easily removed, and the harbor rendered accessible. The portage from Chicago river to the Des Plaines one of the two branches of Illinois river, is 9 miles, and is so low as often to be covered with water and passed in boats. A canal here is contemplated, and could be made with little expense, which would open a water communication between the Great Lakes and the Mississippi, through the Illinois. Half a mile from the mouth of the Chicago, is *Fort Dearborn*, which see.

Chile, r. Chili, falls into the Pacific, in lat. 39° S.

Chili, country, S. America, bounded N. by the desert of Atacama, which separates it from Peru; E. by the Andes, which separate it from Buenos Ayres; S. by Patagonia; and W. by the Pacific Ocean. It is a long and narrow country, extending from 25° to 43° S. lat. about 1,300 miles long, and on an average 140 broad, and containing about 180,000 square miles. The part of this country inhabited by the Spaniards, is from the northern boundary to the river Biobio in lat. 36° 50' S. The part S. of the Biobio, is occupied by the Araucanian Indians. Chili is well watered. Lying at the foot of the Andes, it naturally receives the waters which fall on the western declivity of those mountains, and rush with the rapidity of torrents directly into the Pacific Ocean. The rivers are numerous and serve to irrigate the valleys, rendering them exceedingly fertile. Chili has been called the Switzerland of America. The lofty chain of the Andes runs along its whole eastern boundary, and the country below is composed to a considerable extent of vallies surrounded by high mountains or ridges. In most cases there are little openings in these ridges, more or less rugged and precipitous, and passable only for mules.

As to its climate, Chili may be divided into two regions; the variable and humid region, south of lat. 35°, where the weather is changeful and it rains occasionally throughout the year; and the invariable and dry country, where it does not rain for two thirds of the year, and in the most northerly provinces does not rain at all. Throughout the whole of this dry country, extending from 25° to 35° of S. lat. a distance of nearly 700 miles, not a cloud is to be seen from November to May. The

atmosphere during this period is perfectly clear, and the dews are scarcely perceptible, nor is the heat oppressive. The proximity of the Andes tempers the air, and the mercury fluctuates between 70 and 80 of Fahrenheit, and rarely rises to 85°. Thunder storms are unknown in this part of Chili. The climate generally is remarkably salubrious. The southern part of Chili is abundantly clothed with fine timber and forest trees and abounds with corn, wine and oil. The country between the parallel of 32° and the northern boundary is dry and barren of vegetable productions, but rich in mines of tin, copper, silver and gold. The climate and soil of Chili are well adapted to the culture of sugar and rice. Cattle are every where numerous and of a large size. Gold is found in the sands of the plains, brooks and rivers, and to a greater or less degree in almost every mountain and hill of the northern provinces. Several of the mines have been wrought for centuries and have yielded a great produce. All the silver mines are found in the highest and coldest parts of the Andes, and on that account few of them are worked. The silver mine of Huasco is the richest in the world. The copper mines are exceedingly numerous, and all that are worked yield at least half of the weight of the ore in refined copper. The value of the gold and silver annually produced, a few years since was estimated at \$3,000,000; and that of the copper and tin is supposed to be \$500,000. Besides these metals, lead, and iron of the very best quality, are found in abundance. There are also several mines of quicksilver. There are 14 volcanoes in Chili which are in a state of constant eruption, and a still greater number that discharge smoke only at intervals. With one or two exceptions, they all lie nearly in the middle of the Andes from E. to W. so that the lava and ashes thrown out by them never extend beyond the mountains. Three or four earthquakes occur in Chili annually. They are however generally slight, and little notice is taken of them. There are but three carriage roads in the whole country, viz. 2 from St. Jago to Valparaiso and 1 from St. Jago to Concepcion. The high ridges which every where separate the vallies of Chili from each other, are passable only for mules. The commerce with the provinces of Buenos Ayres is carried on through the passes of the Andes. The pass most frequented is that of Putaendo.

According to a census taken about the year 1812, the population is 1,200,000, exclusive of independent tribes of Indians. With a trifling exception, the whole of this population is concentrated between the rivers Juncal and Biobio, on a territory of about 100,000 square miles, making 12 to a square mile. What portion of the 1,200,000 are Indians cannot be exactly ascertained. In almost every valley there is a town of submissive Indians, and there are besides about 50,000 held in slavery. Mestizoes are numerous in the vicinity of all the Indian towns, and the Huasos or peasantry are all of this mixed class. There are very few negroes, not more than 1,000 in all the country. Chili was formerly a Spanish colony, under the dominion of a viceroy. In 1810, during the troubles in Spain, the people took the government into their own hands; but in 1814 the Spanish troops from Peru invaded the country and re-established the royal authority. In 1817, however, the revolutionists, aided by an army from Buenos Ayres under Gen. San Martin, defeated

the royal troops, and restored the independence of the country. The declaration of independence is dated February 12th, 1818. The supreme authority at present is in the hands of a director, who is absolute. It is expected, however, that a congress will soon be called and a government organized on republican principles. The Roman Catholic is the established religion. There are said to be about 10,000 monks and nuns in Chili; and the religious institutions with which they are connected, hold nearly one third of the landed property of the country, besides about ten million dollars in money lent out at an interest of five per cent. per annum.

The army, in 1818, consisted of 8,400 regular troops, besides militia; the navy of one vessel of 52 guns; one of 36; two of 22; one of 18; and one of 14; recently purchased and manned by foreign seamen, chiefly Americans and English. The revenue in 1817 was \$2,177,967. While Chili was a Spanish colony, European goods to the amount of more than a million of dollars were sent from the mother country in exchange principally for gold and silver. From the opening of the ports by the revolutionists in February 1817, to July 1818, the imports into Chili in British vessels amounted to about \$1,800,000; and in vessels belonging to citizens of the United States to about \$1,300,000. The imports consisted of arms, ammunition, iron, furniture, tobacco, and of French, India, and British manufactures, particularly the latter. The exports were gold, silver, copper, tin, wheat, hemp, hides, peltry, figs, raisins, &c.

Chimborazo, the most elevated summit of the Andes, is 100 m. S. W. Quito. Lat. 1° 20' S. It rises to the height of 21,440 feet above the level of the sea, and for nearly 5,000 feet from its top is covered with perpetual snow. This vast mountain presents a most magnificent spectacle when seen from the shores of the Pacific ocean, with its enormous circular summit projected upon the deep azure blue of the equatorial sky. It was ascended by Humboldt on the 23d June 1797, who with his party reached the height of 19,300 feet above the level of the sea, when their further progress was prevented by a chasm 500 feet wide. Here they were surrounded by a thick fog, and greatly incommoded by the extreme tenuity of the air, which was also felt intensely cold and piercing. Respiration was difficult, and blood oozed from their eyes, their lips, and their gums. The point on which they stood was higher than any ever before attained by man.

China, an extensive empire in the S. E. of Asia. The territories subject or tributary to the emperor of China are of vast extent, including Mandshuria and Mongolia proper, Thibet, and the whole of central Asia, between Hindostan on the S. and Asiatic Russia on the N. On the W. it is bounded by the Belur mountains, which separate it from Independent Tartary. The country, however, described in the present article, is China proper, which is of much more limited extent, lying between 20° and 41° N. lat. and between 98° and 122° E. lon. It is bounded E. and S. by the sea, W. by Thibet, N. by Chinese Tartary, and contains about 1,300,000 sq. miles. The surface appears to be agreeably diversified with hills and vallies, plains and mountains. One chain of mountains running from west to east through the southern provinces, seems to be a prolongation of the Himmaleh range.

In approaching the sea it turns to the north-east, and terminates on the coast a little south of the great river Yang-tse-kiang. The north of China is also intersected by several chains of mountains, but their direction is unknown, as that part of the country has never been explored by Europeans. The climate is very different in different parts of the country. The heat in the southern provinces is greater than in Bengal, while in Pekin, near the northern frontier, snow lies on the ground for three months of the year, and the climate is colder than under the same latitude in Europe. The principal cultivated production is rice, which is the general food of the people, the tea-plant, and the white mulberry for the productions of silk, which has long been one of the staples of the empire. The forests produce the camphor tree, tallow tree, and paper mulberry tree. Agriculture is prosecuted with much care. Every spot is brought under cultivation; even steep hills and mountains are converted into terraces, one above another, each supported by a mound of stone, while reservoirs are made at the top, in which rain is collected and conveyed down the sides to water the plants. Beds of coal in the province of Shantung supply the greater part of China with fuel. Copper abounds in the southwestern provinces, and mines of gold and silver are said to be copious.

The public works of China are magnificent. No nation can produce a parallel to the great canal, which runs in a continuous line from Pekin 500 miles to the Yang-tse-kiang. By means of the Yang-tse-kiang and one of its tributaries from the S. the navigation is continued to the frontier of the province of Canton. It is here interrupted by a range of mountains which runs across China, and which must be passed by land, but on the opposite side of the range travellers embark on another river, which falls into the sea near Canton: so that between that city and Pekin, a distance of 1,000 miles the water communication is uninterrupted, except by a land journey of a single day. Smaller canals are almost innumerable. The great roads and bridges of China are likewise very magnificent. But the most stupendous of all the public works of the Chinese is the great wall. This mighty rampart runs along the whole northern and part of the western frontier, and is carried over rivers upon arches, over plains, vallies and mountains, through a distance of 1,000 miles. It is built of brick and stone, usually 25 feet high and so thick that 6 horsemen can ride abreast on the top. It is provided with towers at every little interval, and was designed as a barrier against the incursions of the Tartars. The period of its erection is variously stated from 600 to 2000 years ago.

The population of China has been a subject of much speculation. The number of 333,000,000 which was given by a mandarin to Lord Macartney, as founded on official data, seems abandoned on all hands as an empty vaunt. Geographers now generally place it somewhere about 150,000,000. The government is an absolute despotism, but is administered with much of the patriarchal spirit. The army is estimated at 810,000 men, of whom 210,000 are cavalry and 600,000 infantry. The revenue is reckoned by Barrow at £66,000,000.

The officers of government are called Mandarins, and are divided into nine orders, the lowest of which are entrusted with the collection of the revenue, others are governors of cities,

and the highest class are governors of provinces or viceroys. There is no established religion and no congregational worship, the government studiously avoiding and prohibiting every thing by which men can be assembled together. The system almost exclusively professed is that of Fo, which is distinguished by numerous images of departed worthies, some of gigantic size; by processions, bells, beads, and tapers, forming a striking resemblance to the Catholic rites. The Christian religion has been introduced by the Jesuits, who at one time boasted of 300,000 converts, but their career has been stopped by that hostility to change which is so deeply fixed in the ruling powers. The Chinese are of a mild, affable and quiet disposition. Among their good qualities are unremitting industry, perseverance in their pursuits, exactness and punctuality in business, veneration for parents and ancestors, and a general good humour and courtesy of manners. Among their vices are an entire disregard of truth, and unparalleled skill in the art of cheating.

The Chinese display great ingenuity in the manufacture of porcelain, silks and satins, cottons, and a variety of little ornamental articles. Their paper and ink are also of a very superior quality. The internal commerce of China is unrivalled in extent. The innumerable rivers and canals with which it is intersected, are covered with barges of every form and dimension, interchanging the productions of the different provinces. Considerable commerce is also carried on with the Indian islands by the Chinese in their own junks, no vessel from these quarters being allowed in return to enter her ports. Foreign commerce is viewed with a jealous eye. Europeans have only two points at which they are allowed to trade, one at Kiachta the emporium for the overland trade of Russia, and the other at Canton. The management of the trade at Canton is vested in 10 or 12 persons, called the *hong* merchants, who are generally men of great wealth, and receive the imperial license to trade with Europeans. All foreign cargoes pass through their hands, and they also provide the cargoes to be exported; but though they thus enjoy a monopoly, yet as they are men of extensive dealings, they do not afford much reason to complain of their conduct. The principal exports are tea, silks, cottons, and china-ware. Among the principal exports are woollen cloths, furs, cotton, opium, and watches.

Choctaw Agency, Mississippi, 4 m. W. Pearl river, 120 N. E. Natches. Here is a post-office.

Choctaws, Indians, whose country lies chiefly within the chartered limits of Mississippi, but also extends to Tombigbee river in Alabama. The N. boundary, which separates it from the country of the Chickasaws, is a line drawn from the Mississippi in lat. 34° N. due S. E. to strike the Tombigbee at the mouth of Ooktibbeha creek; on the E. it is bounded by the Tombigbee, on the S. by a line running a little below the parallel of 32° N. lat. and on the W. the boundary line commences at a point a little east of Pearl river and proceeds due N. to the Natches road, thence to the head of Black creek down this creek till it reaches a lake, thence in a direct course so as to strike the Mississippi one mile below the mouth of Arkansas river, thence up the Mississippi to the parallel of 34° N. lat. The soil is fertile and is watered by the Yazoo, Big Black and Pearl rivers in the upper part of their course. The number of the Choctaws is estimated at 25,000. Within a few years they have made great advances in civilization. They raise corn, cotton, and a great many cattle, and often appear clad in cotton garments of their own manufacture.

The American Board of Foreign Missions have a mission among these Indians. It was commenced in 1818 by members of the Cherokee mission, and does not yield to that mission either in the extent of its field of operation or in the funds for its endowment. With a view to the instruction of the Indians in the arts of civilized life, the Government of the United States have extended to it their patronage. The expenses of erecting a school-house and dwelling-house at the different establishments have been defrayed from the National treasury, and the sum of \$1,000 annually is allowed to the Mission. The Choctaws, their Chiefs especially, have from the beginning professed towards it the most friendly dispositions, and have recently proved their sincerity, by the most unequivocal evidence. At a treaty held in 1816, they sold a portion of their country to the United States, for which they are to receive \$6,000 annually, in cash, for 17 years. The whole of this sum they have voted to appropriate to the support of schools under the direction of the American Board.

In Jan. 1822, according to the returns of the Superintendent, the number of the mission family was 36, and there were belonging to the mission

135 acres of land improved, 18 horses, 7 yoke of oxen, 385 head neat cattle, 220 swine, several waggons, ploughs, &c.; school houses, and other buildings were erected, and the number of pupils in the schools was 90. The two primary seats of the Mission are Elliot and Mayhew; a school is also established at Newell, and requests have been made by the Indians for similar establishments in various other places.

The Choctaws formerly owned the country lying between their present western boundary and the Mississippi, but in 1820 it was ceded by them to the United States in exchange for lands in Arkansas. The Choctaw lands in Arkansas comprise the whole country between the Arkansas and Red rivers, bounded W. by Canadian river and E. by a meridian drawn through the lowest settlement on Arkansas river belonging to the Cherokees.

Louisville, 102 N. N. E. Frankfort, 465 below Pittsburg by water. Lon. 84° 27' W. Lat. 39° 6' N. It is regularly laid out, in a pleasant and healthy situation, and is one of the most flourishing towns west of the Alleghany mountains. The growth of Cincinnati has been rapid, almost without a parallel. In 1805, the population was 500; in 1810, 2,540; in 1815, it was estimated at 6,500; and in 1820, it was 9,642. In 1821, it contained a court-house, 2 brick market-houses, 4 printing-offices, a steam flour-mill built of stone, 9 stories high; a steam saw-mill, 1 woollen and 4 cotton factories, 2 glass-houses, a brewery, and several other manufacturing establishments; 4 banks, a College edifice and 6 houses of public worship, 2 for presbyterians, 2 for methodists, 1 for episcopalians, and 1 for friends. The funds of the Lancasterian school have lately been increased by a subscription of \$30,000 and it is intended to erect it into a college. Among the literary and scientific institutions are the Cincinnati College, the Medical College, and the Western Museum Society whose object is to collect the natural and artificial curiosities of the Western country. Cincinnati is the most flourishing commercial town between Pittsburg and New-Orleans. About 130,000 barrels of flour were inspected here during the year ending April 1st. 1819, and more than 120,000 bushels of salt imported. A company has been recently formed for the purpose of importing goods directly from Europe, by the way of New Orleans.

E. by the sea, N. by Cuttack, and S. by the Carnatic. It was divided into five districts, or circars, viz. Guntoor, Condapilly, Ellore, Rajamundry, and Cicacole. The country is very fertile, and produces all kinds of grain, tobacco, sugar,

and cotton. The manufactures are salt, muslins, chintzes, calicoes, and other goods. Pop. 2,500,000, the greater part of whom are Hindoos. This country was ceded to the British in 1765, who have divided it into five districts or collectorships, over each of which presides a European collector, judge, &c.

Circassia, a country of Asia, occupying a great part of the territory between the Black and the Caspian seas. It is on the N. declivity of the Caucasian mountains, and bounded N. by the rivers Terak and Cuban. The limits of this country are very ill defined. The territory so designated, is actually filled with a multitude of small, independent, and hostile tribes. They acknowledge a species of vassalage to Russia, but they neither pay tribute nor perform military service; and even indulge in regular plundering excursions into the Russian territories. The men are tall, and of an athletic, though slender form; their features are expressive, their air haughty and martial. The beauty of the females has been long celebrated throughout Europe; and Circassian captives are considered as the brightest ornaments of an eastern seraglio.

Cochin-China, a country, in the S. E. of Asia, forming part of the peninsula between China and Hindostan. It lies between 11° and 17° N. lat. and is bounded N. by Tonquin, E. by the China sea, S. by Cambodia, and W. by Laos. It consists of a narrow plain, 400 miles long, included between the sea coast and a chain of mountains. This plain is of most exuberant fertility, yielding abundantly all the tropical productions, but more particularly rice and sugar. Pop. including Cambodia, Laos and Tonquin, 18,000,000. The inhabitants are courteous and affable and treat Europeans with the greatest kindness. The government is despotic. The late sovereign, who died in 1820, is described as almost a second Peter the Great. In the course of ten years he raised his navy from a single vessel to 1,200 of various descriptions. He was equally active in improving the army, which amounts now to 113,000 men, of whom upwards of 40,000 are disciplined after the European system. He did much also in building bridges, facilitating all kinds of commercial intercourse, and promoting agriculture. His successor appears to be of the same spirit. The coast abounds with fine harbors. The trade is principally with China, to which are

exported a vast quantity of sugar, woods, canes, spices, drugs and gold.

Columbia, *District of*, a tract of country, 10 miles square, on both sides of Potomac river, 120 miles from its mouth. It was ceded to the United States by Maryland and Virginia in 1790, and in 1800, became the seat of the General Government. It is under the immediate government of Congress. Pop. whites 22,614, slaves 6,377, free blacks 4,048, total 33,039; engaged in agriculture 853, in commerce 512, in manufactures 2,184. The principal towns are Washington city, Alexandria, and Georgetown. The amount of exports in 1820 was \$1,204,955. The amount of shipping in 1819, was 22,141 tons. A Catholic college is established at Georgetown. The Columbian college went into operation in 1822. It has a president, 4 professors and 2 tutors. A brick building 117 feet by 47 is erected on the high ground north of Washington city 3 m. from the Capitol. A Baptist Theological seminary is connected with the college.

Columbia, p-t. Fluvanna co. Va. on the N. side of James river, at the mouth of the Rivanna, 45 m. above Richmond, 35 from Charlottesville. It has a warehouse for the inspection of tobacco.

Columbia, p-t. Richland district, S. C. and capital of the State, is at the confluence of Broad and Saluda rivers, which unite to form the Congaree, 113 m. N. N. W. Charleston, 35 S. S. W. Camden. Lon. 81° 7' W. Lat. 33° 57' N. It is regularly laid out on an elevated plain, and contains a state-house, court-house and jail, and 4 houses for public worship, 1 for Presbyterians, 1 for Episcopalians, 1 for Methodists, and 1 for Baptists. The town is supplied with water by artificial means. A large reservoir is constructed 76 feet in diameter and 8 feet deep, into which the water is raised 120 feet by a steam engine and thence conveyed in cast iron pipes through the principal streets of the town. The expense of this establishment was \$45,000. The healthy situation of the town, its position at the head of boat navigation on the Congaree, and its advantages as the seat of government, and of a well conducted college, combine to make it a place of importance. Intercourse with Charleston by steam-boat, has lately been established.

South-Carolina college was founded in this town by the legislature in 1801, and is immediately under the patronage of the State. It has a president, 4 professors, 2 tutors, more than 100 students, a well selected library of 5,000 volumes, and a fine mathematical apparatus. Handsome brick buildings are erected for the accommodation of the president, professors, and students. The Legislature make an annual grant to the college of about \$10,000, and are perpetually extending to it a fostering hand. The Governor, Judges, and other great Officers of State, are Trustees ex officio. This college bids fair to be a most valuable institution for South Carolina.

Columbia, or *Oregon river*, one of the largest rivers in N. America, which waters the new territory of Oregon. It rises in the Rocky mountains, about lat. 55° N. and running S. W. falls into the Pacific ocean, in lat. 46° 15' N. between Cape Disappointment on the N. and Point Adams on the S. The whole length of the river is estimated at 1500 miles. Its principal branches are the Wallaumat, Lewis river, and Clarke's river, all of which empty on the S. E. side; the first 125 miles from its mouth, the second 413, and the third about 600. Vessels of 300 tons may ascend the Columbia, as far as the mouth of the Wallaumat. The tide flows up 183 miles, and large sloops may ascend this distance. Seven miles further up the navigation is interrupted by the great rapids. Above the rapids, the river is navigable for 65 miles, till it is interrupted by the long narrows, and 6 miles further up by the falls. Above the falls there are no obstructions for 150 miles, to the mouth of Lewis river. The portages around the great rapids, long narrows, and falls, are in all 5 miles.

Congo, an extensive country in the S. W. of Africa, between 6° and 8° S. lat. bounded N. by the Zaire, or Congo, which separates it from Loango, W. by the Atlantic, and S. by Angola. Its limits in the interior are unknown. The Portuguese have here several forts and factories for carrying on the slave trade. The vegetable productions are maize, cassava, sweet potatoes, pepper, sugar cane, and tobacco. The population of this country has been extravagantly stated by the Portuguese, but Capt. Tuckey and recent travellers, contradict these accounts. The largest town visited by Captain Tuckey, did not contain above 100 huts, and 600 inhabitants. St. Salvador is the capital.

Congo River, or *Zaire*, r. Africa, which falls in the ocean under parallel of 6° S. lat. Its sources are unknown. It has been supposed by some that it was a continuation of the Niger, and under this impression an expedition was sent from England in 1816, under Capt. Tuckey, to explore the river. He ascended in a sloop 120 miles, and on foot 150 miles further, but meeting with insuperable difficulties was obliged to return.

Connaught, one of the 4 provinces into which Ireland is divided, containing the counties of Galway, Mayo, Sligo, Leitrim and Roscommon.

Connecticut River, the largest river in New-England, rises near the borders of Lower Canada, and running south, divides New Hampshire from Vermont, and passing through Massachusetts and Connecticut, flows into Long Island sound between Saybrook and Lyme. Its whole length is 410 miles. It is navigable for vessels drawing 10 feet water, 36 miles, to Middletown; for small sloops, 50 miles, to Hartford; and by means of canals and other improvements, it has been rendered passable for boats to the Fifteen Mile Falls, 250 miles further. The perpendicular height of the falls which have been overcome by dams and locks between Springfield in Massachusetts and Hanover in New

Hampshire, a distance of 130 miles, is about 200 feet.

Connecticut Lake, in the N. part of N. H. It is about 5½ miles long and 2½ broad, and is one of the sources of Connecticut river. Lat. 45° 2' N.

Connecticut, one of the U. States, bounded N. by Massachusetts; E. by Rhode Island; S. by Long Island sound, and W. by New York. It lies between 41° and 42° 2' N. lat. and between 71° 29' and 73° 24' W. lon. It is 90 miles long, 70 broad, and contains 4,764 square miles. Pop. in 1790, 237,946; in 1800, 251,002; in 1810, 261,942; in 1820, whites 267,181, slaves 97; free blacks 7,870, total, 275,248; engaged in agriculture 50,518, in commerce 3,581, in manufactures 17,581. The coast of this State is every where indented with harbors, the principal of which are those of New London, New Haven and Bridgeport. The principal rivers are the Thames, the Connecticut and the Housatonnuc. The face of the country is hilly, but the hills are generally of moderate size, and occur in quick succession, furnishing the traveller with a beautiful and constantly varying prospect. The great body of the State is excellent land. Indian corn, rye, grass, and potatoes, are the most important productions.

Among the literary institutions are Yale College, in New Haven, one of the oldest and most respectable colleges in the United States; Bacon Academy in Colchester; the Episcopal Academy at Cheshire; the American Asylum for the deaf and dumb, in Hartford, and the school in Cornwall for educating heathen youth. Common schools are very liberally supported. The State has a fund of \$1,700,000, the income of which together with \$12,000 from the public taxes, is annually applied to the support of common schools.—The Congregationalists are the most numerous religious denomination. In 1818 they had 213 congregations; the Episcopalians 74; Baptists 90, and Methodists 53. There are very few of any other sect.

Connecticut has a larger proportion of her citizens engaged in manufactures than any other State, except Rhode Island. The manufacture of tin into culinary vessels, is carried on to a very great extent. The ware thus made is taken by peddlars and sold in all parts of the United States. The other manufactures are nails, glass, hats, buttons, fire-arms, and wooden clocks.—The trade of Connecticut is chiefly with the West India islands and the Southern states. The exports consist of horses, mules, butter and cheese, cider, Indian corn, beef, pork, &c. Much of the produce of the western parts of the state is carried to New York, and of the eastern parts to Boston and Providence. The amount of shipping belonging to the state in 1816, was 60,104 tons. A company has been recently incorporated for the purpose of opening a canal from the tide waters at New Haven to the northern boundary of the State at Southwick; measures are taking to have the canal continued to Connecticut river at Northampton. For Housatonnuc canal see *Housatonnuc*.

Connecticut Reserve, often called *New Connecticut*, is in the N. E. part of the state of Ohio, bordering on Lake Erie and the state of Pennsylvania. It is 120 miles long from E. to W. and on an average, 52 broad, containing 1,614 square miles, or 3,000,000 acres. It is divided into 7 counties, and is principally settled by emigrants from Massachusetts and Connecticut.

Constantina, a province in the E. part of Algiers, bounded E. by Tunis, W. by Algiers Proper, S. by the desert, and N. by the Mediterranean. It is 230 miles long, from E. to W. and 109 broad. It is the most fertile, best cultivated, and every way the most improved part of the Algerine territory. In 1806, the British concluded a treaty with the dey of Algiers, by which they stipulated to pay 11,000*l.* annually, in consideration of which they obtained possession of La Cala, Bona, and Il Cullu, with permission not only to trade, but even to erect fortifications.

Constantina, the capital of the province above described, occupies the site of Cirta, celebrated as the ancient bulwark of Numidia. It is built on a rocky peninsula formed by the Rummel. Here are to be seen many ruins of the ancient city. 160 m. E. Algiers, 180 W. Tunis. Lon. 60° 24' E. Lat. 36° 25' N. Pop. according to Hassel, 100,000.

Constantinople, the ancient *Byzantium*, and cal-

led by the Turks *Stamboul*, city of Europe, and capital of the Turkish empire, is beautifully situated on the W. side of the Bosphorus, or straits of Constantinople, between the Black sea and the sea of Marmora. Lon. 28° 56' E. Lat. 41° N. The city stands chiefly on a slope, on seven eminences which rise above each other in beautiful succession, presenting a fine view to the approaching spectator. The harbour is not on the side of the sea, but in a long, capacious inlet, running along the N. side of the town. It is of sufficient depth for the largest vessels, and can contain 1200 sail, and has an open navigation to the Euxine on the N. and the Mediterranean on the S. The form of the city is triangular, with one side on the harbor, another on the sea of Marmora, and the third and longest towards the land. It is surrounded with walls. The streets are in general narrow, gloomy, and slanting; badly paved, and incumbered with dust or mud. The houses are low, built of wood and earth, and conflagrations are frequent. The number of mosques is about 300, and of these the oldest and most interesting is that of St. Sophia, which was built by the emperor Justinian. The interior still retains much of its ancient grandeur. The number of Christian churches in Constantinople and its neighbourhood is 22. The seraglio includes not merely the apartments of the women, but is an assemblage of palaces and buildings, 9 miles in circumference, inhabited by the Sultan and his court. It occupies the promontory or point of land in the eastern part of the city. The entrance of the first court is very wide and lofty; in this are the mint, the principal mosque, an hospital and other buildings. The second court is called the Divan-court, the great council chamber being there. To the N. adjoining the Divan is the third court, or seraglio properly so called, in which are the apartments of the women. Through it there is a narrow covered passage leading to the audience chamber of the sultan, which is of amazing magnificence, particularly the throne.

The population of Constantinople is variously estimated from 300,000 to 500,000. About one half are Turks, and the remainder Greeks, Christians, Armenians, Franks, and Jews.

The suburb of Galata stands opposite to the seraglio on the N. side of the harbor; it is inhabited only by merchants and seafaring people. To the west is the suburb Tophana [cannon foundry.] On the heights above this suburb stands Pera, principally occupied by individuals in the suites of ambassadors to the Porte from the different European powers. Scutari, though standing on Asiatic ground, and separated from Constantinople by the Bosphorus, is still accounted a suburb of the great city. The castle of the seven towers is a state prison near the sea of Marmora.

Copenhagen, the metropolis of the Danish monarchy, and the best built city in the N. of Europe, stands on the E. coast of the island of Zealand, about 20 miles from the narrowest part of the Sound. Its position is on a low tract, surrounded with small lakes, and partly intersected by inlets of the sea. It is encompassed with walls. Some of the streets are narrow and inconvenient, others broad and well paved. Most of the houses are modern, and built of brick or stone. The finer edifices are of free stone. That part of the new town called Amalienburg was built by Frederick V. and is extremely beautiful.

The harbor of Copenhagen is formed by a narrow arm of the sea, running between the city and the opposite island of Amack; it is capable of containing 500 merchantmen, and though the entrance is so narrow, that one ship only can enter at a time, the depth is sufficient to admit vessels of the largest size; they come in the canals close to the warehouses, where they load and unload their cargoes. A part of this harbor is appropri-

ated to the royal navy. The shipping belonging to the port may be computed, on an average, at 400 vessels, manned by nearly 6,000 seamen.

Copenhagen is not only the residence of the court, but the seat of all the great public establishments of the kingdom. The bishop of Zealand has his residence here; and there are 20 churches, and several Jewish synagogues. Of the 22 hospitals, the most splendid is that of Frederick V.; the most interesting is the lying-in-hospital, to which is attached a school of midwifery, and a foundling hospital. The university has considerable funds, and, on an average, 700 students, of whom 168 are maintained from public funds. The library is voluminous, but with few books of recent date. The royal library amply compensates for the deficiency of that of the university, being a superb collection of more than 250,000 volumes.

In October, 1728, a dreadful fire broke out, which consumed two thirds of the town; in February, 1794, another fire destroyed nearly 1000 houses. In the attack by the British in 1807, above 300 houses, including the cathedral and part of the university, were destroyed, while double that number was damaged. Pop. 105,000. 170 m. N. E. Cordova, city, Spain, is agreeably situated on the N. bank of the Guadalquivir. It was known in the time of the Romans. Here are the remains of a palace of the Moorish kings; but the most interesting edifice is the cathedral, which is a magnificent monument, 534 feet long, and 387 wide.—Cordova was always noted as a place of trade, and is still remarkable for the kind of leather called, from this town, *Cordoran*, or *Cordwain*. 75 m. N. E. Seville, 120 N. E. Cadiz, 180 S. S. W. Madrid. Lon. 4° 45' 53' W. Lat. 37° 52' 13' N. Pop. 30,000.

Cordora, a province of S. America, the S. part of Buenos Ayres. It contains 105,000 sq. miles,

and 75,000 inhabitants. Cordova is the capital.

Cordora, city, cap. of the above province, is in lat. $31^{\circ} 30'$ S. and lon. $63^{\circ} 30'$ W. on the river Primero, 450 m. N. N. W. Buenos Ayres. Pop. 6,000. It has a university. It carries on a considerable trade, particularly in mules, who are collected in immense droves from the neighboring provinces, and sent over the Andes to Peru.

Cordora, t. Mexico, in Vera Cruz. It contains 800 families, and carries on a great trade in sugar and tobacco. 150 m. E. Mexico. Lon. $96^{\circ} 56'$ E. Lat. $18^{\circ} 50'$ N.

Corea, a large country of Asia, E. of China, and consisting of a peninsula, formed on one side by the Yellow sea, and on the other by the sea of Japan, 400 miles long, and 150 broad. Very little is known to Europeans about this country. The king pays tribute to the emperor of China; and in manners, religion, and written language, the people resemble the Chinese. The spoken dialect is entirely different. The same jealousy of foreign intercourse exists as in China and Japan.

Corella, t. Spanish Navarre, on the Alhama, 8 m. W. Tudela.

Corentin, r. Guiana, falls into the Atlantic ocean, in N. lat. $5^{\circ} 50'$, about 5 leagues W. Berbice.

Corfe-Castle, t. Eng. in Dorsetshire, in the peninsula of Purbec. The castle is of very high antiquity; and was deemed impregnable before the invention of artillery. Its walls and towers are now demolished. 4 m. S. E. Wareham.

Corfu, isl. in the Mediterranean, at the entrance of the gulf of Venice, 45 miles long, and 25 broad. It is the first in rank, though not in size, of the seven islands composing the Ionian republic.—The climate is mild, but liable to sudden transitions from heat to cold. The island exports considerable quantities of oil and salt. Its other productions are olives, oranges, lemons, honey and wax. Pop. about 60,000. The Corfutes profess, in general, the Greek religion. This island being in a manner the key of the Adriatic, has always been of considerable political importance.—See *Ionian Islands*.

Corfu, (an. *Corcyræ*), cap. of the island of Corfu, on the E. coast, on the slope of a promontory, at the foot of which the port opens. It is neither large nor well built; but is very strong. The inhabitants amount to about 15,000, and carry on a considerable trade. Lon. $20^{\circ} 17'$ E. Lat. $39^{\circ} 40'$ N.

Corinth, t. Greece, in the Morea, near the isthmus of Corinth. In ancient times it was one of the most flourishing cities of Greece, adorned

with theatres, fountains and various public buildings, from the style of which a new order of architecture took its name. But the greater part of this magnificence disappeared on the capture of the town by Mummius, the Roman consul, in B. C. 146, when the *chefs d'œuvre* of art were either broken in pieces by the soldiers, or transported to Rome. At the present day, Corinth presents more the appearance of a village than a town. The traces of the ancient walls are however discernable, and the citadel, or *Acro-Corinthos*, still remains. Corinth had two harbors: one of which still forms the port of the town; the other in the gulf of Egina, called *Cenchrea*, is now little frequented. 48 m. E. Athens, 342 S. W. Constantinople. Lon. $23^{\circ} 28' 29'$ E. Lat. $37^{\circ} 58' 22'$ N. Pop. about 1,400.

Cork, co. Ireland, bounded N. by Limerick, E. by Tipperary and Waterford, S. by the ocean, and W. by Kerry. It contains 19 baronies, 269 parishes, 76,739 houses, and 416,000 inhabitants.

Cork, the second city of Ireland, is on the Lee, 420 m. S. W. Dublin. Lon. $8^{\circ} 30'$ W. Lat. $51^{\circ} 40'$ N. The town has been very much enlarged and improved of late, and its population is now estimated at 90,000. It stands about 16 miles from the sea, and its harbor, or the Cove of Cork, 9 miles below the town, has long been celebrated as one of the finest in the world. It is sufficiently capacious for any number of vessels; and the entrance is deep and narrow, and defended by a fort on each side. Great quantities of salt provisions are exported from Cork, and during the slaughtering season, 100,000 head of black cattle are prepared. The other exports consist of butter, candles, soap, whiskey, &c. Its manufactures are sail-cloth, sheeting-paper, leather, glue, glass, coarse cloth, &c.

Cornwall, maritime co. England, forming the

S. W. extremity of Great Britain. It is surrounded by the sea, except on the E. side, where it is bounded by Devonshire. It is washed on the N. by the Bristol channel, and on the S. by the British channel, the Land's End being the point at which these two seas meet. It contains 1,407 sq. miles, and 188,117 inhabitants; families 44,189, of which number 17,465 are engaged in agriculture, 10,954 in trade and manufactures, and 15,770 in other ways. The principal wealth of Cornwall is derived from its mines. In 1800, there were 45 mines of copper, 28 of tin, 18 of copper and tin, 2 of lead, 1 of lead and silver, 1 of copper and silver, 1 of silver, 1 of copper and cobalt, 1 of tin and cobalt, and 1 of antimony. The annual produce of the copper mines has lately amounted in value to £350,000; and of the tin mines to more than £250,000. This county possesses more parliamentary boroughs than any other in the kingdom, and sends 44 members to parliament.

Corsica, one of the largest islands in the Mediterranean, situated between the coast of Genoa and the island of Sardinia. It is 110 miles long, and contains 4,300 square miles, and in 1815, 174,702 inhabitants. Corsica is covered with mountains, which rise to a great height, and have their tops covered with snow during the greater part of the year. The soil, though stony and but little cultivated, is productive in corn, excellent wine, oranges, lemons, figs, and other fruits, but the wealth of the island lies in its oil, chestnuts and timber. The religion is Roman Catholic.—This island has been successively occupied by the Carthaginians, the Romans, the Goths, the Saracens, the Franks, the Pope, the Pisans, the Genoese, the English and the French. It now belongs to France, and is divided into 2 departments, Golo and Liamone.

Cossacks, a warlike people, who inhabit the Ukraine (i. e. *the frontier*), or the countries bordering on Russia, Poland and Turkey. Their origin is Russian, and their language fundamentally the same, although mixed with Turkish and Polish words. They profess the Greek religion. They are divided into two main branches, viz. *Tschernomores* or Cossacks of the Black Sea, and the Cossacks of the Don. The former occupy the W. part of the Kuban-Steppe, lying S. of the river Don, E. of the sea of Azof, and N. of the river Kuban. Their number is computed at 20,000. The Cossacks of the Don occupy an extensive territory on both sides of the Don, which is included in none of the Russian governments. They live in villages of a few hundred houses, and support themselves, when at home, by fishing and the breeding of cattle. They shew little inclination for agricultural pursuits, although many parts of their territory are very fertile. Their capital is Tscherkask, near the mouth of the Don. They enjoy great privileges, when compared with the other members of the Russian empire, paying no poll money, and manufacturing their own salt and spirits duty free. In return, each man is accounted a soldier, receives no pay in time of peace, and is bound to maintain two horses, for which the crown supplies oats and hay only during six months of the year. Their number amounts to 40,000 fighting men.

When an eruption takes place, the snow around the volcano is suddenly melted, and a torrent of water is poured down from the mountain. Ashes, fire and rocks, are then thrown forth with a dreadful roaring noise, and spread desolation over the surrounding plains. The roar of the volcano continues day and night so long as the eruption lasts, and has been heard at the distance of 600 miles. The most remarkable eruptions have taken place in the years 1698, 1738, 1742, 1744, 1766, 1768, and 1803. In 1698 the volcano burst forth in such a tremendous manner, as to destroy the city of Tacunga, with three fourths of its inhabitants.

Creeks, Indians, inhabiting the western parts of Georgia, and the eastern parts of Alabama.—Their principal settlements are on the Coosa, Tallapoosa, and Chatahoochee rivers. The country is fertile and salubrious, covered with fine timber, watered by numerous navigable rivers, and sufficiently extensive to support, with proper cultivation, more than a million souls. The number of the Creeks was formerly estimated at 24,000, of whom 6,000 were warriors, but in their war with the U. S. in 1813-14, they suffered severe losses. They now amount to 20,000, and are the most warlike tribe on this side the Mississippi. For several years past, efforts have been made to introduce among them agriculture and the arts of civilized life, and with considerable success.

Cuttack, district, Hind. in Orissa, between 20° and 22° N. lat. bounded N. by Bengal, W. by a range of mountains, and E. by the sea. It is 140 miles long by 60 broad. Pop. 1,200,000. In this district is the celebrated temple of Juggernaut, which is annually visited by some hundreds of thousands of Hindoo pilgrims. Cuttack was ceded to the British in 1803, and is now managed by a civil establishment of a judge, collector, &c.

Cuttack, city, Hind. cap. of Cuttack district, stands on an island, formed by the Mahanuddy river. Lon. $86^{\circ} 10'$ E. Lat. $20^{\circ} 31'$ N.

Cutterah, t. Hind. in Bareilly. Lon. $79^{\circ} 37'$ E. Lat. $28^{\circ} 3'$ N.

Cutica, t. Bengal, on the W. bank of the Hoogly, 75 m. N. Calcutta. It is a station of the English Baptists, and the centre of a large circle of itinerant labors carried on by native preachers, under the direction of an European Missionary. Schools have been established, in which nearly 1000 children are instructed.

Cuxhaven, s-p. Germany, on the left bank of the Elbe, at its mouth. The harbor is large and commodious, and having lately been improved at a great expense, is one of the safest on the coast, and is resorted to in all cases of danger. 60 m. N. W. Hamburg. The light-house is in lon. $8^{\circ} 43' 1''$ E. Lat. $53^{\circ} 52' 21''$ N.

Cuyahoga, co. Ohio, on lake Erie, at the mouth of Cuyahoga river. Pop. 6,328; engaged in agriculture 1,739, in commerce 62, in manufactures 232. Chief town, Cleveland.

Cuyo, province, S. America, on the E. side of the Andes, formerly included in Chili, but now annexed to Buenos Ayres.

Cuzco, city, Peru, and the ancient capital of the Peruvian empire. It was founded in 1043, by Manca Capac, the first Inca of Peru. The grandeur and magnificence of the edifices, of the fortress, and of the temple of the sun, struck the Spaniards with astonishment in 1534, when the city was taken by Pizarro. The city preserves many monuments of its ancient grandeur, and among others, the great fortress built for its defence, which, although injured by time, bears testimony to the power of the Incas, and excites astonishment in the mind of every beholder. Cuzco

is at present a large city. The houses are almost all of stone, and of fine proportion. There is an elegant cathedral, and 9 churches. Pop. 32,082, of whom 16,122 are whites, 14,254 Indians and the rest of mixed blood. 550 m. E. S. E. Lima. Lon. $71^{\circ} 4'$ W. Lat. $13^{\circ} 42'$ S.

Cuzumel, isl. near the coast of Yucatan, in the bay of Honduras. Lat. 19° N.

Cyclades, the name given by the ancients to a group of islands in the Archipelago. Andros is the most northerly, and Santorin the most southerly; the others of note are Naxos, Paros, Peripho, Milo, Zea, Tino, and Stampalia. See *Archipelago*.

Cynthiana. See *Cinthisiana*.

Cypress-bridge, p-v. Chatham co. N. C.

Cyprus, isl. near the coast of Asia Minor, 140 miles long, and 75 broad. Area 8,600 sq. miles. It was much celebrated in ancient times, for its ample population, its smiling aspect, and above all as the abode of gaiety and pleasure. It is nearly traversed from E. to W. by two lofty chains of mountains. South of the mountains are level tracts, which are exposed without shelter to burning blasts from the deserts of Africa and Arabia.

The corn of Cyprus is of excellent quality; but wine is the staple product of the island. Its grapes are perhaps the richest and most luscious in the world. Other products are apricots, cheese, wool, cotton, silk, and salt. Cyprus is noted for manufactures of leather, carpets, and printed cottons.—Two-thirds of the inhabitants are Christian, but are cruelly oppressed by their Turkish masters. The governor resides at Nicotia: his appointment is annual, and obtained by purchase; so that the object of every successive ruler is to extort the utmost possible amount of revenue, without any regard to what may afterwards become of the island. Under this horrid system, Cyprus, from being one of the most fertile and beautiful spots in the world, has been converted almost into a desert. Pop. 60,000.

Dacca Jelapore, district, Bengal, between 23° and $24^{\circ} N$. lat. It is 180 m. long, and 60 broad, and is intersected by the Ganges and Brahmapootra, which, with their various branches, form a complete inland navigation. It is esteemed the richest district in Bengal. Its principal produce is rice. Next to this are betel nut, tobacco, and cotton. Dacca is the capital.

Dacca, city, Hind. cap. of Dacca district, and for 80 years the capital of Bengal, is on the N. bank of the Old Ganges, 100 m. from the sea, a position extremely favourable for trade, as the river communicates with all the other inland navigations. Here are manufactured those beautiful muslins, which are exported to every part of the world. It is the residence of an English judge and collector, and the station of a battalion of native infantry. The English Baptists support a missionary here, and schools in which more than 500 children are instructed. 180 m. N. E. Calcutta. Lon. $90^{\circ} 17' E$. Lat. $23^{\circ} 42' N$.

Dahomey, a kingdom in the interior of W. Africa, behind the Slave coast. The country is very

little known to Europeans. The parts which have been visited are very beautiful and fertile. The soil is a deep, rich clay, yielding maize, millet, and Guinea corn in abundance. The inhabitants are a warlike and ferocious race. Their institutions and political system are of a very extraordinary character. Their women are trained to arms. All the females of the nation are considered as belonging to the king, and a distribution of wives takes place once a year at a grand festival. The government is the most absolute despotism; yet founded not on force or terror, but on a blind and idolatrous veneration for the person of the sovereign.

Dalmatia, a country, in the S. of Europe, extending along the E. side of the Adriatic, between 42° and $44^{\circ} 30' N$. lat; and bounded N. by Croatia, and E. by Turkey. It is partly continental and partly insular. The continental portion is divided into the circles of Zara, Spalatro, and Macarsca; the principal islands are Brazza, Lesina, Corsola, and Melada. Zara is the seat of government; the other towns of note are Spalatro, Sebenico, Knin, Trau, Narenta, and Almissa. The whole contains about 6,700 sq. miles, with 343,000 inhabitants. It abounds with excellent harbors, but very little use has hitherto been made of them. The forests on the mountains are of great extent. The chief products of Dalmatia are maize, wheat,

grapes, and Olives. The inhabitants of the maritime towns are chiefly Catholics, and resemble the Italians in language and manners; but the inhabitants of the upper country are Morlachians, and have all the indolence of a half civilized nation. This country now belongs to Austria.

Damascus, a pachalic or government of Asiatic Turkey, comprehending nearly the whole eastern part of Syria. The soil and productions are extremely diversified. The banks of the river Orontes, and the plains of the Hauran, are the most fertile portions. All the mountains are appropriated to olive, mulberry, and other fruit trees. From the vines, wine is made by the Greeks, and raisins by the Mahometans. The population consists of Mahometans, Christians, Jews, and wandering tribes from the deserts. It carries on various manufactures, and a considerable trade. Pop. 900,000.

Damascus, a city of Syria, the capital of a pachalic of the same name, situated in a fertile plain, amidst extensive gardens, forming a circuit of between 25 and 30 miles. The Arabs speak of it with enthusiasm, and think they can never sufficiently extol the freshness and verdure of its orchards, and the abundance and variety of its fruits. No city contains so many canals and fountains; each house has one, and all these waters are furnished by three rivulets or branches of the river Barrady, which, after fertilizing the gardens for a course of three leagues, flows into a hollow of the desert to the S. E. and forms a morass called

"Behairat-el-Merdi," or the Lake of the Meadow. The city is said to contain 2,000 mosques, and 200,000 inhabitants, of whom 20,000 are Catholics, 5,000 Schismatics, 5,000 Jews, and the rest Mahometans. This city is the seat of extensive trade and manufactures. It was formerly celebrated for the manufacture of sabres of such peculiar quality, as to be perfectly elastic; they never broke, and iron would yield under their edge. The manufacturers of arms are still numerous. There are also extensive manufactures of silk and cotton stuffs. Commerce is carried on chiefly by caravans, of which the principal is that of Mecca. Three caravans, each accompanied by above 2,500 armed men, go thrice a year to Bagdad, the journey occupying 30 days; those to Aleppo travel twice or thrice a month; besides which, there are many to different parts of Syria, Damascus being the rendezvous of a multitude of pilgrims from all quarters, so as to resemble an immense fair. Provisions of all kinds are abundant. 136 m. N. Jerusalem, 195 S. Antioch, 276 S. S. W. Diarbekir. Lon. 36° 30' E. Lat. 33° 30' N.

Damietta, city, Lower Egypt, on the E. branch of the Nile, 6 miles from the sea. It is on a narrow neck of land from 2 to 6 miles broad, between the Nile and Lake Menzaleh. The houses are built in a crescent along the bank of the river. The walls, formerly so strong, are now in ruins. It has no harbor, and vessels are obliged to lie in the road at the mouth of the river, where they are exposed to all winds. The commerce of Damietta is notwithstanding very considerable, especially with Syria, Cyprus, and other parts of the Turkish empire. It exports hides, tallow, rice, and occasionally corn; and imports tobacco, wood, soap, cotton, oil, and raw silk. The country round Damietta is perhaps the most fertile in Egypt. This city is threatened by a serious danger from the gradual encroachments of Lake Menzaleh towards the river, by which the space between these two waters is gradually diminished. Another apprehension is, that this branch of the Nile, which is annually becoming shallower, will cease in a few years to be navigable for boats of large burden. Pop. 30,000 or 40,000. Lon. 31° 49' 45" E. Lat. 31° 25' N.

Dantzic, an opulent commercial city of West Prussia, on the left bank of the Vistula, 5 m. from its mouth. It is surrounded with ramparts, and has the power of laying the country on one side under water. The harbour is formed by the mouth of the Vistula; and the cargoes of vessels drawing more than eight feet water are conveyed to the city in barks. What is properly called the gulf of Dantzic, consists of an arm of the sea, sheltered from the north winds by the tongue of land on which stands the small town of Hela. The chief branch of trade at Dantzic consists in corn from Prussia and Poland. The principal exports are potash, hemp, flax, linen, timber, and amber. The shipping that frequent the port, belongs principally to the British, Dutch, Danes and Swedes. Among the public buildings are the cathedral, the town-house, the arsenal, and 21 churches, 12 belonging to Lutherans, 7 to Catholics and 2 to Calvinists. Pop. 52,821. 68 m. W. S. W. Konigsberg, 235 N. E. Berlin. Lon. 18° 38' 32" E. Lat. 54° 20' 48" N.

Danube, a great river of Europe, which rises in the grand duchy of Baden, near the S. W. corner of Germany, and running east through Wirtemberg, Bavaria and Austria, enters Hungary, where it turns to the south, and then to the southeast, till entering Turkey, it resumes its easterly course, and discharges itself into the Black sea by five mouths, between 44° 30' and 45° 30' of N. lat. The length of its course is about 1,800 miles. Its principal branches from the north are the Pruth, the Sereth, the Tisza and the Morava; from the south, the Save, the Drave, the Inn and the Isar. The principal towns on its banks are Ulm, Ingolstadt, Passau, Lintz, Vienna, Presburg, Pest, Buda, Belgrade and Izmail. It becomes navigable at Ulm.

Danville, p-t. Pittsylvania co. Va. on Dan river, near the southern boundary of the State, 150 m. S. W. Richmond. Lon. $79^{\circ} 25'$ W. Lat. $36^{\circ} 34'$ N. It is pleasantly situated at the falls of Dan river, 130 miles above the great falls of the Roanoke. A canal is now in progress around the falls of the Roanoke, which will open a direct water communication for batteaux from Danville to Norfolk; and another canal is completed around the falls of the Dan, which, with the removal of a few other obstructions, will continue the navigation for some distance above the town. These improvements, together with the advantages which the falls afford for mills and manufacturing establishments, have made Danville a place of considerable consequence, and it bids fair to become the great upland depot for an extensive and fertile country, embracing the adjacent districts of N. Carolina and Virginia, and part of Tennessee.

Danville, p-t. and cap. Mercer co. Ken. on the S. W. side of Dick's river, 40 m. S. by W. Frankfort, 33 S. S. W. Lexington. Lat. $37^{\circ} 30'$ N. It has about 200 houses, a court-house and jail, and a church. Several mills and factories are erected here. It is in the vicinity of the most fertile and populous part of Kentucky. Darfur, or *Darfoor*, a kingdom of Central Africa, bounded on the E. by Cordofan and the country of the Shilluks, which separate it from Sennaar and Abyssinia; on the W. by Bergoo, which divides it from Begherme and Bornou; on the S. by unknown regions. The government is despotic. The religion is Mahomedanism. The principal commerce is with Egypt, and is carried on entirely by caravans. The exports are slaves, camels, ivory, the horns, teeth, and hide of the rhinoceros and hippopotamus; ostrich feathers, gum, and pimento. The imports are glass, arms, light cloths, red Barbary caps, small carpets, silks, shoes, and writing paper. Pop. estimated at 200,000. Cobbe is the capital.

Darien, p-t. and seaport, Macintosh co. Geo. on the north and principal channel of the Altamaha, 12 miles from the bar, 192 below Milledgeville on the Oconee, 62 S. S. W. Savannah, 70 N. N. E. St. Mary's. Lon. $81^{\circ} 37'$ W. Lat. $31^{\circ} 23'$ N. The town stands on a high sandy bluff, and contains a Presbyterian church, a bank, and a printing press. Owing to the rapid settlement of the back country, Darien has risen within a few years to a place of much importance. In 1810, there were only 206 inhabitants; but in 1819 the number was between 1 and 2,000. In 1818, 40 houses were erected during 3 months, some of which are large and elegant; a bank was established with an extensive capital, and a steam-boat navigation opened with Milledgeville. The bar at the mouth of the river has 14 feet at low water. Exertions are making to remove the obstructions in the navigation, and to render Darien the place of foreign export for the produce of the rich country between Oconee and Oakmulgee rivers.

Dead Sea, or *Asphaltites*, that is, the Lake of Bitumen, a lake of Palestine, 180 m. in circuit. It is bounded on the E. by lofty hills, and on the N. by the plain of Jericho, through which it receives the river Jordan. The water is clear and limpid, and of greater specific gravity than any hitherto discovered. It holds in solution muriate of magnesia, muriate of lime, and muriate of soda. Mines of fossil salt are found in the neighborhood. Many absurd fables were formerly circulated respecting the Dead Sea. It was affirmed that fish could not live in the water, and that the pestiferous vapours hovering over it were fatal to birds attempting to fly across; but these stories are contradicted by recent travellers. Great quantities of asphaltum, or mineral pitch, are always seen floating on the surface of the Dead Sea. Five cities, including Sodom and Gomorrah, situated on this spot, were all swallowed up, according to scripture, for their unparalleled iniquity. Many ruins remain on the western banks; and travellers have thought that foundations might be discovered in the bottom at seasons when the waters were low.

Delaware Bay, a spacious bay of the U. S. between the states of Delaware and New-Jersey. Its entrance is 20 miles wide, between Cape May in lat. 38° 56' N. and Cape Henlopen in lat. 38° 47' N. It is 65 miles long from Fisher's Point to Cape Henlopen, and in the broadest part 30 miles wide.

Delaware River, U. S. rises in N. Y. in the Catskill mountains. In its course, it resembles the letter W. It separates Pennsylvania from New-York and New-Jersey, and runs into Delaware bay, 5 miles below Newcastle. It is navigable for ships of the line 40 miles to Philadelphia, and for sloops 35 miles further to the head of the tide, at Trenton falls. Above the falls, it is navigable 100 miles for boats of 8 or 9 tons. The whole length, from its source to the bay, is 300 miles.

Delaware, one of the U. S. bounded N. by Pennsylvania; E. by Delaware river, Delaware bay, and the Atlantic; S. and W. by Maryland. It extends from lat. 38° 30' to 39° 45' N. and from lon. 74° 56' to 75° 40' W. It is 87 miles long from N. to S. and from 10 to 36 broad, containing 2,120 sq. miles. Pop. in 1790, 59,094; in 1800, 64,273; in 1810, 72,674; and in 1820, whites 52,282, slaves 4,509, free blacks 12,958, total 72,749; engaged in agriculture 13,259, in commerce 533, in manufactures 2,821. The state is divided into 3 counties, Kent, Newcastle and Sussex.

A small part of the state in the north is hilly; the rest is level and low. The soil in the north, and along the Delaware, is generally a rich clay; in the middle, there is a considerable mixture of

sand; and in the south, sand predominates.—Wheat is the staple production. It grows here to very great perfection. Indian corn, rye, oats, &c. are also cultivated. The principal rivers are Brandywine creek and Christiana creek, which unite in the northern part of the state, and empty into Delaware river. They afford an uncommon number of excellent seats for mills and manufactories, which are extensively improved. The flour mills on Brandywine creek, near Wilmington, are the finest collection in the United States. Gunpowder, and cotton and woollen goods are also manufactured to a great extent, in the same neighborhood. In 1815, there were within 9 miles of Wilmington, 44 flour mills, 13 cotton manufactories, 15 saw mills, 6 woollen manufactories and 6 gunpowder mills, besides several others. A canal has been commenced between Christiana creek in this state, and Elk river in Maryland. When finished, it will be 22 miles long, and will open an inland water communication between Delaware river and Chesapeake bay. Presbyterians are the most numerous religious denomination. Several years since they had 24 congregations; the Episcopalians 14; Friends 8; Baptists 7; and the Methodists were numerous in the two southern counties. The legislature consists of a senate and house of representatives. The representatives are chosen annually; the governor and senators triennially. Dover is the capital.

Delhi, province, Hind. between 28° and 31° N. lat.; bounded E. by the Ganges, N. by a range of mountains, W. by Moultan, and S. by Agra and Ajmeer. The greater part of this province is sterile for want of water. All the territory E. of the Jumna, with a considerable district round the city of Delhi, belongs in fact to the British; but its revenues are allotted to support the emperor or great Mogul, now reduced to the humiliating state of dependency on a foreign power. The south is occupied by native chiefs in alliance with the British government. The country N. W. of the Jumna, is occupied by a number of petty Seik chiefs.

Delhi, a celebrated city, and for many years the capital of Hindostan, is situated on the Jumna. During the era of its splendor, it is said to have contained 2,000,000 inhabitants. Immense sums were expended in constructing the fortress, and cathedral. Superb palaces and innumerable mosques were built, and colleges in different parts of the city. The garden called the Shah al Imar is said to have cost a million sterling. In 1739, this city was invaded by Nadir Shah, who massacred 100,000 of the inhabitants and took £62,000,000 sterling of plunder. The modern city contains many good houses, built of brick or stone with flat roofs. Since the city has been placed under the British police, the population is fast increasing, and every species of durable property rising yearly in value. The emperor (who was placed on the throne in December 1806, and is entirely supported by the British) and the royal family occupy the whole of the citadel. Lon. 77° 9' E. Lat. 28° 43' N.

Denmark, a kingdom in Europe, consists of several large islands lying between the Cattegat and the Baltic, and a peninsula which is bounded W. by the North sea or German ocean; N. by the Skager Rack; E. by the Cattegat and the Baltic; S. E. by the dutchy of Mecklenburg in Germany; and S. by the Elbe, which separates it from the kingdom of Hanover. It extends from 53° 34' to 57° 45' N. lat. and contains 21,615 square m. It consists of the Danish Islands, viz. Zealand, Funen, Laaland; and the peninsula of Jutland; Dutchy of Sleswick, Dutchy of Holstein, and Dutchy of Lauenburg. The face of the country is a low plain interrupted by very few hills and no mountains. A ridge of hills runs through the peninsula of Jutland from north to south. The principal productions are grain, large quantities of which are exported, potatoes, tobacco, makder, flax, hemp, &c. In Funen, Holstein and the south of Jutland the agriculture may be compared with that of England. The Danish horses, particularly those of Holstein, are admired for their beauty, strength, and speed, and are exported in considerable numbers to Germany, France, Russia, and Sweden. The breed of horned cattle is also in general very good, and that of sheep has been of late years improved by intermixture with Merinos. Swine are raised in large numbers and furnish a large quantity of bacon for exportation to Norway, Holland and Lubec. Even the abundance of poultry is worthy of notice, as their feathers form an important branch of trade. The climate is temperate, and though the atmosphere during the greater part of the year is thick and cloudy as in England, the country is with few exceptions perfectly healthy. The winter is occasionally of extreme severity, and the sea is impeded with ice. The Sound has at times been crossed by heavy loaded carriages. Pop. according to Hassel, 1,565,000. The established religion is the Lutheran under 7 bishops and 2 general superintendants, but all other religions are tolerated. The whole number of the clergy is 1580. There is a university at Copenhagen, and another at Kiel and schools in every parish where children are taught reading, writing and arithmetic. There are besides many Latin schools maintained at the public expense. Denmark was former-

ly a limited monarchy, but in 1660, by one of the most singular revolutions recorded in history, the nobility, clergy and peasantry joined in surrendering their rights to the sovereign, so that Denmark is now, in law, an absolute monarchy of the most unqualified kind; but the exercise of this power has been modified by the spirit of the age, the effect of the Protestant religion and the progress of improvement. The crown is hereditary in the male and female line, and the title of the sovereign is King of Denmark, grand duke of Holstein, duke of Sleswick, Lauenburg, &c. The revenue is about \$7,000,000. The national debt is nominally between 60 and 70 million dollars, but in reality less on account of its depreciation. The army on the present peace establishment consists of 26,000 men. The navy contains 3 ships of the line, 4 frigates and 3 brigs, with only 4,000 seamen in actual service, but the number is capable of being easily increased as there are several thousand registered seamen at the disposal of the crown. The manufactures, in general, extend only to the supply of the country, furnishing no surplus for exportation. The principal manufacturing establishments are at Copenhagen and Altona. The exports consist principally of corn to Norway; horses to Germany, France, Sweden and Russia; oxen to Holland and Germany; live hogs and bacon to Norway; and dried fish to the Mediterranean. In 1816 the value of the corn exported was about \$2,500,000, of fish \$500,000, and of animals \$500,000. Denmark is finely situated for navigation being almost surrounded by the sea. In 1802 there were 1,378 vessels belonging to this small state, measuring 130,000 tons, and manned by 9,000 seamen. Within a few years, however, the commerce and shipping of the country have very greatly diminished. There are various appendages to the crown of Denmark, viz. Iceland and the Faroe isles in Europe; a part of Greenland; Christiansburg, and other small places on the coast of Guinea; Tranquebar on the coast of Coromandel; with factories in the Nicobar islands; and in the West Indies, Santa Cruz, St. Thomas and St. John.

Detroit river, N. America, which connects lake St. Clair with Lake Erie, is 28 miles long, and opposite Detroit, $\frac{1}{4}$ of a mile wide, enlarging as it descends, and is navigable for vessels of any burden. Near its mouth are Gross isle, and numerous smaller islands; the principal channel is near the eastern side, between Bois blanc island and the Canada shore; the western channel is much wider, but is shallow and full of small islands. Back from the river, the land descends into low grounds and marshes, and the settlements are only one farm deep on the banks of the river, which are regular and even. The country has been settled more than a century, and there is an almost continued line of settlements from the mouth of the river to lake St. Clair, on the Canada side; and on the western side, for several miles above and below Detroit. The houses, though low and mean, are finely set round with forest and fruit trees, and together with the beautiful expanse of the water, form a most agreeable view as you sail on the river.

Detroit, city, and port of entry, Wayne co. and

capital of Michigan Territory, is on Detroit river, 9 miles from lake St. Clair, 18 above Amherstburg in Up. Canada, 313 S. Mackinaw, 302 W. Buffalo, 548 fr. Washington. Lon. $82^{\circ} 56'$ W. Lat. $42^{\circ} 25'$ N. Pop. 1,355. The city was laid out in a regular square, $\frac{1}{4}$ of a mile on each side. The public buildings are, a market-house; a council-house; a penitentiary, built of stone; a bank; a large Government store-house; a military arsenal, and ordnance store-house; an academy; a neat Presbyterian church; and a magnificent catholic church, 116 feet by 60, built of stone, with 2 tall steeples, which is not yet finished.—The situation of Detroit is eminently advantageous in the commerce of the great Lakes. It was settled as early as 1683, by the French from Canada, for the purposes of the fur trade. At present, its trade is chiefly with Ohio and New-York, and with the military posts on the Upper Lakes. In 1818, the amount of shipping belonging to this port, was 849 tons; the value of exports, was \$69,330, and of imports, \$15,611. The fort is a regular work, of an oblong figure, covering an acre of ground, with parapets and bastions, and surrounded by palisadoes, a deep ditch and glacis. Dresden, city, Germany, cap. of Saxony, and one of the best built towns in Europe, is beautifully situated on both sides of the Elbe, at the influx of the Weisseritz. This city has long been noted for the fine arts; the collection of the works of great masters, affording inducements for artists to repair thither. It contains 11 Lutheran churches, 2 Catholic and 1 Calvinist. The royal palace, a spacious but irregular structure, has a tower 356 feet in height, and a number of remarkable apartments, particularly the well known green vault, divided into 8 rooms, all paved with marble, and containing statues, ivory work, silver plate, vases, and precious stones. Among the other public buildings and institutions, are the arsenal; the Dutch and Japanese palace, which contains the royal library, said to consist of 150,000 volumes; an academy for cadets of noble family; a military school; and the house of industry, which finds employment for more than 3,000 individuals. The principal manufactures are those of mirrors, tapestry, lace, jewelry, porcelain, earthenware, and in particular of plaited straw. The population of Dresden has been for some time diminishing. In 1755, it was 63,000; in 1788, 53,000; in 1801, 48,000; in 1811, 45,000. On the 26th and 27th August, 1813, the combined Austrian and Russian army attacked the city, and were obliged to retire; but it was afterwards obliged to capitulate on 6th November, 1813. 55 m. S. E. Druses, a free and warlike race of people of Syria, who inhabit the Castravan mountains, Lebanon, Anti-Lebanon, and all the coast from Gibail to Saide, and E. as far as Balbec. Their country is about 100 square leagues in extent, and contains 120,000 inhabitants, of whom about 40,000 are able to bear arms. They are divided into a number of religious sects, some of which entertain very peculiar opinions. The government seems to be a mixed form, in which the emir or prince is the chief, uniting in his own person the civil and military powers. The Druses are in general fierce, restless, and enterprising; their bravery even approaches to temerity. They pay tribute to the Turks.

Dublin, co. Ireland, bounded E. by the Irish sea, N. by Meath, W. by Meath and Kildare, and S. by Wicklow. It contains 355 square miles, or 228,211 acres. The southern part of the county is rocky and mountainous, in other parts it is flat. In the vicinity of Dublin the lands are fertile and luxuriant, but in more remote parts agriculture is not in a flourishing state. Pop. in 1790, 210,000.

Dublin, the metropolis of Ireland, is situated on both sides of the Liffey, within a mile of Dublin bay, which is of a circular form, and about 6 miles in diameter. Though spacious, this bay is not safe, being exposed to winds from the E. and S. E. but this defect has been in part obviated by a very strong wall of cut stone, extending 3 miles directly into the bay. The Liffey is embanked on either side with a noble wall of freestone, forming a range of beautiful and spacious quays through the whole city. Besides the advantages resulting from the vicinity of Dublin to the sea, there are two canals which terminate here, and open an extensive inland communication with various sea-ports at opposite extremities of the island. These canals are navigated by boats of 60 tons burden, and by means of them extensive districts in Ireland are supplied with foreign goods from Dublin. The amount of import duties alone, paid here in 1817, was £945,000. Few cities can boast of a greater number of magnificent and useful buildings; among these are the castle, near the centre of the city; the Royal Exchange, a beautiful edifice of Portland stone; the Commercial buildings; the newly erected Corn-exchange; the Linen hall, a vast and massy pile of buildings, forming a magazine for this staple manufacture of Ireland; the custom house finished in 1790 at an expense of £255,000; the government wet docks; the stamp office and post office; Nelson's pillar, a fluted column 130 feet high; the Parliament-house, now converted into the national bank; the court of justice, and Trinity college. Trinity college, is a university founded by queen Elizabeth, and consisting of a provost, seven senior and eighteen junior fellows, and seventy scholars. Besides these, there are various royal, and privately endowed, as well as university professorships. Graduates and students in any one of the three universities of Oxford, Cambridge and Dublin, are by established usage admitted *ad eundem* in either of the other

two. The number of students in 1818 was 1,209. The library contains 68,946 volumes. The university sends one member to parliament. Dublin contains 19 parishes, 2 cathedrals, 19 parish churches, besides several chapels of the established religion; 2 meeting-houses of the Church of Scotland, 7 of other dissenters, 4 of Methodists, 2 of Quakers, 1 Lutheran Danish, 1 French Calvinist, and about 26 Roman Catholic chapels. The city of Dublin returns two members to parliament. Houses 16,458. Pop. 187,939. 60 m. W. Holyhead in Wales, 330 N. W. London. Lon. 6° 15' W. Lat. 53° 21' N.

Edinburgh, or *Mid-Lothian*, co. Scotland, containing 360 sq. miles, or 230,400 acres. On the N. it is bounded by the frith of Forth, E. by Haddington co. S. by Lanark, Peebles, and Berwick, and W. by Linlithgow. Pop. 1811, 148,607.

Edinburgh, the metropolis of Scotland, is about a mile and a half from the frith of Forth, and is surrounded on all sides except the north by lofty hills. It stands on high and uneven ground, being built on three eminences, which run from E. to W. The central ridge, on which the city was originally built, is terminated abruptly on the west by a precipitous rock on which the castle is placed. The valley to the north of this ridge, which was formerly a lake, has been drained, and is now a marsh, nearly dry in summer. On the rising ground to the north of this valley stands the New Town of Edinburgh. The ravine on the south of the central ridge is also wholly covered with buildings as well as the southern eminence; and beyond the immediate precincts of the town in this quarter, numerous villas have of late years been erected. In the Old Town the buildings are crowded and irregular, and in some parts rise to the height of 11 stories. The New Town has been built within the last 50 years. It is laid out in streets and squares, and for beauty and regularity is not surpassed by any city in the world. The Old and New Towns are connected by a mound, and a bridge thrown across the valley.

Among the public buildings of Edinburgh, the principal is the castle. In the centre of the city are the buildings in which the courts hold their sittings. In one of these is the advocate's library, consisting of more than 70,000 printed volumes, and about 1,000 volumes of manuscripts. There are ten churches, and 5 chapels of ease belonging to the establishment, besides 4 places of worship for the Burghers, 3 for the Anti-burghers, 4 for the Relief, 4 for the Baptists, 2 for the Independents, a Gaelic chapel, and one each for the Methodists, Cameronians, Bereans, Glassites, Unitarians, Quakers, and Roman Catholics, and six for Episcopalians. The university of Edinburgh has long been celebrated. It was founded in 1582, and embraces at present 27 professorships, which are classed as follows. Faculty of Theology—Divinity, Church History, and Oriental Languages. Faculty of Law—Law of Nature and Nations, Civil Law, Scots Law, and Civil History and Antiquities. Faculty of Medicine—Anatomy and Surgery, Practice of Medicine, Botany, Materia

Medica, Chemistry, Theory of Medicine, Midwifery, Natural History, Clinical Surgery, Military Surgery, and Medical Jurisprudence. Faculty of Arts—Moral Philosophy, Rhetoric and Belles Lettres, Greek, Latin, Natural Philosophy, Mathematics, Practical Astronomy, Logic, and Agriculture. The number of students in 1818, was 2,000. To the university is attached a library of more than 50,000 volumes, an excellent museum of natural history, and a botanic garden. As a medical school the university has attained to high repute, and is resorted to from the most remote quarters. The High-school, the principal grammar school of the city, has a rector and four masters, and above 800 scholars. The principal charitable institution is Heriot's hospital. There are several other hospitals; three charity work-houses, an asylum for the industrious blind, a Magdalene asylum, a house of industry, a society for the suppression of begging, a Royal Infirmary, a military hospital, a lying-in hospital, and two dispensaries. Edinburgh is supported chiefly by its courts of justice. Law is the leading profession; and those who derive their subsistence from this source form the chief class of its inhabitants. A considerable class also depends on the university and other seminaries. It is not in any sense a trading or manufacturing town. It is a royal borough, and sends one member to parliament. Pop. in 1811, including Leith, 102,987; exclusive of Leith, 82,624. 42 m. E. Glasgow, 396 N. N. W. London. Lon. 3° 12' W. Lat. 55° 58' N.

Edisto, or *Ponpon*, r. S. C. is formed of two branches, which unite below Orangeburgh, and enters the ocean on each side of Edisto island, through 2 inlets called North and South Edisto inlets. It is navigable for large boats 100 miles. Through South-Edisto inlet enter all vessels from the North, that are bound to Beaufort, Asheepoc, Combahee, and Coosa.

Edisto Island, on the coast of S. C. 40 m. S. W. Charleston, with which it is connected by a good inland navigation. It is separated from Wadmalaw and John's islands, by North-Edisto inlet, which affords a good harbor for vessels of small draft. The island is 12 miles long, and from 1 to 5 broad, and contained in 1818, 236 white inhabitants, and 2,600 slaves. Here are 2 churches, 1 for Presbyterians, who have a large permanent fund for the support of the gospel, and 1 for Episcopalians.—The island is devoted to the culture of cotton, and is very productive. The white inhabitants reside on their plantations only during the winter, and spend the hot months in summer-houses on the margin of the sea.

Egypt, country, Africa, bounded N. by the Mediterranean; N. E. by Asiatic Turkey; E. by the Red sea; S. by Nubia; and W. by the Libyan desert. It lies on both sides of the Nile, between lat. 22° and 32° N. Its length along the river is 700 miles. Its breadth is nominally 200 or 300 miles, but the only habitable part is the valley of the Nile, which is usually 15 or 20 miles wide, and bounded on each side by a chain of mountains running parallel with the river. The country beyond the mountains, both to the east and west, is a desert. Egypt is divided into Upper and Lower. Lower Egypt is composed of the Delta of the Nile. Upper Egypt is the narrow belt of land extending from Cairo to Syene. The soil on the banks of the Nile is a black fat loam, and is exceedingly productive. Lower Egypt is annually overflowed, and enriched by the deposit of mud and slime, and has been celebrated, in all ages, for its fertility. In Upper Egypt, the water is conveyed to the lands by machinery. The principal productions are rice and wheat.—The climate of this country is characterized by an almost entire absence of rain. It is much hotter than that of other countries in the same latitude. In the spring, for about 50 days, it is liable to the terrible wind called the *simoon*, which threatens, when long continued, almost the extinction of animal life.—Among the diseases, are the plague, which is commonly supposed to be indigenous in Egypt, and to spread its ravages from thence as from a centre; and the ophthalmia, a severe complaint affecting the eyes.

The population of Egypt is estimated at 2,500,000. It consists of Copts, Arabs, Turks, and, till very lately, Mamelukes. The Copts appear to be the descendants of the ancient Egyptians, mingled, in some degree, with the Persians and Greeks, but kept entirely separate, by religious antipathy, from the Arabian and Turkish invaders. They reside, almost exclusively, in

Upper Egypt, and their number has been estimated at 200,000.—The Arabs are the most numerous part of the population. The Turks are established to a considerable extent in the great cities, and their numbers and power have of late considerably increased. The Mamelukes were originally Georgian and Circassian slaves, who, under the Fatimite Khalifs, were brought into the country, and became part of the military power of the state. They were thus enabled to rise against their masters, to massacre or expel them, and to assume the dominion of the country. During the invasion of Egypt, by the French, their strength was broken, and the Turks have recently driven them out of the country.—The government is now administered by a Turkish pacha, sent from Constantinople, and 24 beys or governors of provinces.

The objects which, above all others, attract the attention of the traveller in modern Egypt, are the stupendous monuments of ancient grandeur, with which it is covered. These are not so much distinguished for taste and skill, as for immense size. This enormous magnitude is particularly conspicuous in the Pyramids. The largest of these structures measures nearly 500 feet in perpendicular height, and has a square base of 700 feet. The greater part consists of a solid mass of masonry. The most remarkable of the Pyramids are immediately south of Cairo, on the opposite side of the Nile. The trade of Egypt with christian nations, is carried on by Alexandria; that with the other parts of the Turkish empire by Damietta. An extensive commerce is also maintained with the interior of Africa by means of caravans.

England, the southern and most considerable division of Great Britain, bounded N. by Scotland ; S. by the English channel, which divides it from France ; E. by the German ocean ; and W. by Wales, the Atlantic ocean, and the Irish channel. It is of a triangular figure, and extends from 50 to 55° 40' N. lat. and from 1° 50' E. to 6° W. lon. It is 400 miles long from N. to S. and in some places 300 broad. The superficial extent is about 50,000 sq. miles, or 32,000,000 acres. Of these it is calculated that about 10,500,000 acres are in cultivation for tillage, and about 14,200,000 in pasturage ; 3,000,000 more are capable of being brought into cultivation. The population of England and Wales was about 5½ millions in 1700 ; in 1750, 6½ millions ; in 1770, 7½ millions ; in 1790, 8,675,000 ; in 1801, 9,168,000 ; in 1811, 10,488,000 ; and in 1821, of England 11,261,437, of Wales 717,438, total 11,978,875.

The country is divided into 40 counties, which will be found in the following table, with the population and extent of each, in 1811.

Of the population, 1,789,531 persons were employed in trade, manufactures, and handicraft, and 1,524,227 in agriculture. The soil of England is various, but a greater proportion good, and under excellent cultivation. The principal productions are wheat, barley, oats, rye, French wheat, beans and peas. The climate is liable to sudden and frequent changes, and to great variations of dryness and moisture. The general range of the thermometer is from 86 degrees in summer to 16 and 10 in winter. The prevailing winds are the west and south-west.

The manufactures of England are of prodigious extent. The manufacture of wool is one of the most ancient. At the end of the 15th century the total value of woollen, manufactured was estimated at £8,000,000 ; in 1783, at £16,800,000 ; in 1800, at £19,800,000 ; and it does not appear to have increased much since. The value of the woollen manufactures exported, was in 1790, £5,190,637 ; in 1800, £6,918,175 ; in 1812, £5,084,991. The cotton manufacture is of recent establishment. In 1705, the cotton imported, amounted to 1,170,881 pounds. But the invention of Sir Richard Arkwright's celebrated machinery gave a rapid extension to the cotton manufacture. In 1781, about five million pounds of cotton were imported ; in 1787, 22,176,887 ; in 1812, (including Scotland,) 91,662,344 ; and in 1818, 124,996,427. The official value of the cotton manufactures, and cotton yarn, exported, in 1805, amounted to £9,857,348 ; and in 1815, to £17,869,102.—The hardware manufactures of iron and steel, copper and brass, are next in importance. The annual value of the iron and steel articles manufactured may be estimated at £10,000,000 annually.—The silk and linen manufactures are carried on in England, but not to any great extent. English earthenware is finished with beauty and taste, and in great variety, principally at the potteries of Staffordshire ; and glass is manufactured in various parts, chiefly in Newcastle, Sunderland and Bristol. China ware of a very superior quality is made in Derby and Worcester. In London, every sort of fine and elegant manufacture is carried on, such as cutlery, jewelry, articles of gold and silver, japan ware, cut glass, cabinet and upholstery work, and gentlemen's carriages, clocks, watches, &c.

The commerce of England consists almost wholly in exchange of her manufactures for the raw produce of other parts of the world.—The following is an official account of the value of the whole exports and imports of England from the year 1719 :—

Years.	Imports.	Exports.
1719	£5,367,499	£6,834,716
1729	7,540,620	8,239,924
1739	7,829,373	8,843,624
1749	7,917,804	12,678,758
1759	8,922,976	13,947,788
1769	11,908,560	13,438,236
1779	10,762,240	12,352,052
1789	16,408,040	17,989,385
1799	24,483,841	31,723,727
1809	27,142,541	45,018,663
1814	24,362,124	37,647,874

There are employed in carrying on this extensive trade about 17,000 vessels, of the burden of about 2,100,000 tons, and navigated by 130,000 men and boys.

The King is considered the supreme head of the

church of England. The Episcopal establishment consists of the two archbishops of Canterbury and York, and of 24 bishops, who have the privilege of a seat in the house of peers. There is also the bishop of Sodor and Man, who is not possessed of this privilege. The archbishop of Canterbury is the primate of all England, and takes precedence of all persons, with the exception of the royal family. The bishops of London, Durham and Winchester take precedence of all the other bishops, and the others rank according to the seniority of their consecrations. The next order is that of the archdeacons, of whom there are about 60; after these are the deacons, vicars, rectors and curates, on whom devolve the substantial duties of the priesthood. The revenue appropriated to the support of the church of England may be estimated at about £3,000,000, which is principally derived from tithes.

The constitution of England is a limited monarchy. The executive powers are vested in the king, who acts through the medium of responsible advisers. The legislative power resides in the king, lords, and commons. The commons are elected by the people as their representatives, to watch over their interests, and to act as a control on the executive. Justice, both civil and criminal, is administered by judges appointed by the crown, but who hold their office independent of it. For further particulars respecting England, see *Britain*.

Ephesus, anciently one of the most splendid cities of Asia Minor, and considered the metropolis of all Asia; 39 m. S. Smyrna, near the mouth of the river Cayster. Lon. $27^{\circ} 37'$ E. Lat. $37^{\circ} 50'$ N. The most eminent masters both in sculpture and painting, were natives of this city, and contributed to adorn its temples with their choicest works. But the great ornament of Ephesus was the celebrated temple of Diana, which was built at the joint expence of all the states of Asia; and for its structure, size, and the splendour of its decorations, was accounted one of the wonders of the world. The temple was 425 feet in length, and 200 in breadth, supported by 127 pillars of Parian marble, and of the Ionic order, each 60 feet in height. These pillars were the works of so many kings, and 36 of them were curiously carved by Scopas, one of the most famous sculptors of antiquity.

Each pillar, with its base, was calculated to contain 150 tons of marble. It was extremely rich in its internal decorations, and contained various statues and pictures, some of which were the most perfect productions of antiquity. This celebrated edifice was destroyed during the invasion of the Goths, A. D. 260. Ephesus is now a miserable village of mud cottages, with about a dozen small square buildings of brick, and inhabited by 40 or 50 families of Turkish herdsmen, who live in extreme wretchedness, without one Christian among them; so completely has the glory of the ancient city passed away.

Erie, Fort, a fort, with a small village, in Bertie, Lincoln co. Up. Canada, at the outlet of Lake Erie, opposite Black Rock, N. Y. 18 m. above the falls of Niagara.

Erie Lake, N. America, between 41° 20' and 43° N. lat. and between 79° 50' and 83° 20' W. lon. The boundary between the United States and Upper Canada runs through the centre of the lake. It is 290 miles long from S. W. to N. E.; in the widest part 63½ broad, and in circumference 658 miles. It receives the waters of Lake Superior, Michigan, Huron, and St. Clair, through Detroit river, and discharges itself into Lake Ontario through Niagara river. Its greatest depth is 40 and 45 fathoms, and it has many good harbors. This lake is finely situated for commerce. On the N. W. it is connected by an easy navigation with the upper lakes. On the S. the rivers which flow into it interlock with the branches of Ohio river, and canals might be made in several places at a trifling expense, which would open the navigation, and connect the lake with the vast valley of the Mississippi. On the E. a grand canal is now in progress to connect it with the Hudson. Gales of wind frequently occur late in the fall, and bring with them a heavy swell, with every characteristic of a gale of wind at sea; but the lake affords a safe navigation 7 months of the year. The amount of shipping on the lake belonging to the U. States, in 1819, was 2,334 tons. From May to November, a steam-boat plies between Buffalo and Detroit through the whole length of the lake. A battle was fought here on the 10th Sept. 1813, between the American fleet under Commodore Perry, and the British fleet, in which the latter was taken.

Etna, mt. in the E. part of Sicily, in the Val de Demona, celebrated from the most remote antiquity for its volcanic eruptions. Its height is about 11,000 feet, and its circumference very large. The ascent being very gradual, the sides of the mountain exhibit extensive tracts under different temperatures. The lower region is very fertile. In the upper part, vegetation entirely disappears, and the surface presents a dreary expanse of snow and ice. The approach of an eruption is indicated long beforehand by the emission of a pale smoke from the crater; this is followed, after some time, by clouds of black smoke, which progressively increase in volume. After the lapse of weeks, perhaps of months, the lava begins to boil over the top of the crater, or to burst from some part of its sides; the interior commotion now ceases, and the lava flows slowly down the sides of the mountain. It is pressed forward by the fresh liquid continually issuing from the mountain, and burns up every thing before it, but the inhabitants have at times diverted or absorbed it by digging canals. The whole number of eruptions on record is 31. Those of 1669 and 1755 were particularly destructive; and in the last, in 1809, no less than 12 new openings appeared about half way down the mountain, and continued for several weeks to throw out lava, which covered the adjacent lands to a depth of 30 or 40 feet.

It is about 3,000 miles long from E. to W. and 2,500 broad from N. to S. and contains 3,387,108 sq. miles. It lies almost wholly within the temperate zone, and enjoys a fine healthful climate. It is the smallest of the four grand divisions, but is distinguished above all the rest for learning and science, for excellence in the useful and elegant arts, and for the intelligence, refinement, activity and enterprize of its inhabitants. This is peculiarly true of Great Britain, France, and Germany.—The population is about 180,000,000. The inhabitants are all christians, with the exception of the Turks and scattered settlements of Jews. The christians in Europe are composed of three great bodies, the Catholics computed at 100 millions, the Protestants at 45, and the Greek Christians at 32 millions.

Fayetteville, p-t. and cap. Cumberland co. N. C. 60 m. S. Raleigh, 95 N. N. W. Wilmington, 159 N. E. Columbia. Lon. 79° 58' W. Lat. 35° 3' N. It is advantageously situated near the W. bank of Cape Fear river, at the head of boat navigation.

The river is here crossed by a handsome bridge 1,100 feet in length. The town is regularly laid out, and contains a court-house, academy, 3 banks, 2 printing-offices and 3 houses of public worship. The inhabitants are principally Scotch Highlanders.—Large quantities of tobacco, cotton, wheat, staves, naval stores, and other produce, are brought to this place, and carried down the river to Wilmington, in boats containing each about 120 barrels. Fayetteville is one of the most flourishing commercial towns in the State. Its growth has been very rapid, but has received some severe checks from fire. The inhabitants now begin to use brick for building. The country in the immediate vicinity is elevated; the soil is dry, sandy, and not fertile, except on the water courses.

Fez, country, N. Africa, bounded N. by the straits of Gibraltar, E. by Algiers, S. by Morocco, and W. by the Atlantic. It is now annexed to Morocco, and forms the most valuable portion of that empire. See *Morocco*.

Fez, a large city of Morocco, in Africa, built in 793, and once the capital of all the Western Mahometan states. Leo Africanus describes it in the twelfth century as containing 700 temples and mosques. Such was the veneration in which it was held, that when the road to Mecca was shut up, pilgrimages were made to Fez, as a city almost as sacred. It was no less famous for learning. Its numerous schools for philosophy, physic, and astronomy, were resorted to from all the Mahometan kingdoms of Spain and Africa. The situation of the city is singular. It lies in a valley, which is formed by surrounding hills into a species of funnel, and the higher parts of which are covered with trees, orange groves and orchards. A river winds through the valley, refreshing the fields, turning various machinery, and supplying water to all the city. Fez stands in the hollow parts of this valley; and the gardens seen around it form a most delightful amphitheatre. On a height above the rest of the city stands New Fez. The finest edifice is the mosque of Carubin, which is a mile and a half in circumference. The city contains 200 caravansaries or inns. The markets are immensely crowded. Pop. according to Mr. Jackson, 380,000, according to Ali Bey, 100,000. Lon. $5^{\circ} 20'$ W. Lat. $33^{\circ} 50'$ N.

Fesa, city, Persia, in Fars, supposed to be the ancient *Pasa Sarda*, 56 m. W. Darahjerb.

Fessan, a country of interior Africa, S. of Tripoli. It forms, as it were, a great island in the midst of an immense desert of sand. The cultivated plain is about 300 miles long, and 200 broad. The heat of summer is intense, scarcely supportable even by the natives. The winter on the other hand, is bleak and cold. The population, estimated by Hornman at 70,000 or 75,000, is composed partly of the natives of the bordering desert, and partly of merchants from Egypt, Tripoli, Bornou, Cassina, and other distant parts of Africa. The king pays a small tribute to Tripoli, but in other

respects is entirely independent, and rules his dominions with absolute sway. Fezzan derives its chief importance from that favourable situation, which renders it a grand depot for the immense interior commerce which is carried on between Northern and Central Africa. A British resident has lately been appointed at the court of Fezzan, and the British government have determined to make vigorous efforts, to penetrate by this route into the interior of Africa.

Florence, the capital of the grand duchy of Tuscany, and one of the finest cities of Italy, stands in a beautiful valley intersected by the Arno. Its streets and squares are adorned with pillars, fountains, and statues. The number of churches is uncommonly great, and they contain many excellent paintings. The cathedral is a building of great extent and magnificence. The dome of this building is much admired; also the adjoining tower, 280 feet in height, which is light and graceful in its architecture, and adorned with statues. The church of St. Lorenzo contains the magnificent mausoleum of the Medicis; and the adjoining convent holds the library of the same family, valuable chiefly for its manuscripts. But the grand collection of works of art is in the Medicean gallery, known throughout Europe as the gallery of Florence; it is more than 500 feet long, and replenished with busts, statues, and paintings. The last are arranged so as to exhibit the history of the art from the 11th to the 17th century. Here is the celebrated Venus de Medicis, and other beautiful specimens of art, carried off for a time by the French, but restored in 1815. The university of Florence dates from 1438. In 1542 was instituted the Academia Fiorentina. Here are also schools, and an academy of the fine arts. Dante, Machiavel, Guicciardini, Americus Vespucius, and other distinguished characters, were natives of Florence. Florence is surrounded by a wall, and has two citadels. It is the see of an archbishop, and was a place of great trade from the 13th to the 15th century. 50 m. S. Bologna, 130 N. N. W. Rome. Lon. 11° 15' 45" E. Lat. 43° 46' 41" N. Pop. 75,000.

Florida, p-t. Montgomery co. N. Y. on the Mohawk, 11 m. S. Johnstown, 35 N. W. Albany. Pop. 2,743. It contains 5 churches.

Florida, a territory of the U. States, bounded N. by Alabama and Georgia, E. by the Atlantic, S. and W. by the Gulf of Mexico. Formerly the name of Florida was applied to the whole country east of the Mississippi, and bounded as follows: N. by the river St. Mary from the sea to its source, thence W. to the junction of Flint river with the Appalachicola, thence up the Appalachicola to the parallel of $31^{\circ} N.$ lat. thence due W. along that parallel to the Mississippi. The river Appalachicola divided this country into East and West Florida. The part lying between the Mississippi and Pearl river, is now included in the state of Louisiana; the part between Pearl river and the Perdido belongs to the states of Mississippi and Alabama; and the part east of the Perdido is the country that is now properly called Florida. It is about 350 miles long and 240 wide, and the number of square miles is estimated at 50,000. It lies between 25° and $31^{\circ} N.$ lat. and between $80^{\circ} 30'$ and $87^{\circ} 20' W.$ lon. The surface of Florida is in general level and not much elevated above the sea. It is intersected by numerous ponds, lakes and rivers, particularly the St. John's river, which runs through nearly the whole length of the peninsula from S. to N. A quarry of stone commences at the island of Anastasia and extends to the S. not exceeding 3 miles in width. The stone is a concretion of shells; it is soft when the quarry is first opened, but becomes hard upon exposure to the air, and is of excellent use in building. The southern part of the peninsula is a mere marsh, and terminates at Cape Sable in heaps of sharp rocks interspersed with a scattered growth of shrubby pines. The Gulf stream setting along the coast has here worn away the land, forming those islands, keys and rocks, known by the general name of Martyrs and Pinerais and by the Spaniards called cayos, between which and the mainland is a navigable channel. These islands contain some settlements and many good harbors. The eddies which set towards the shore from the Gulf stream cause many shipwrecks on this part of the coast, furnishing employment for the Bahama wreckers. The rivers and coasts of Florida yield a variety of fish among which are the sheeps-head, mullet, trout and bass, and abundance of shell fish, as oysters, shrimps, crabs, &c. The soil of Florida is in some parts, especially on the banks of the rivers, equal to any in the world; in other

parts, it is indifferent; and there are large tracts which are represented to be of little value. The country, however, has been but imperfectly explored, and few agricultural experiments have been made. Much of the land, which, on a superficial view, has been supposed to be not worth cultivating, it is believed may be turned to very profitable account. Owing to its proximity to the sea on both sides this peninsula has a milder climate than the country to the W. of it, in the same latitude. The productions are corn, rice, potatoes, cotton, hemp, olives, oranges, and other tropical fruits, and it is supposed that coffee and the sugar cane will flourish here. The pine barrens produce grass, which supports an immense number of cattle. The forests yield fine live oak, pitch, tar, and turpentine, and lumber has been exported for nearly a century. Among the most fertile lands are Forbes' purchase and the Alachua Savannah. The climate, from October to June, is generally salubrious; but the months of July, August and September, are extremely hot and uncomfortable; and during this season, fevers are prevalent. At St. Augustine however, the climate is delightful, and this place is the resort of invalids.

Florida has often changed masters. Until 1763 it belonged to Spain. It was then ceded to Great Britain; but in 1783, was restored to Spain, with whom it remained till 1821, when it was ceded to the United States. The white population is composed of Spaniards, English, Scotch, Irish, and Americans. Their number is supposed not to exceed 10 or 15,000, and their settlements are confined to the coast and the banks of the principal rivers. The Seminole Indians formerly possessed the most fertile districts, but in the recent contest with the U. States, they have been scattered and slaughtered. The principal island is Amelia island. The principal towns are St. Augustine and Pensacola. The acquisition of Florida is very important to the United States, as it secures the outlet of several navigable rivers; excludes foreign powers from a long line of vulnerable frontier; gives us numerous ports in the Gulf of Mexico; brings near the W. India islands, and adds some valuable articles to the list of our agricultural products.

Foulahs, a race of negroes, very widely diffused throughout W. Africa. Their most powerful kingdom is Fouta Jallo, south of the Gambia; they possess also Fouladoo, near the sources of the Senegal; Boudou and Fouta Torra, between the Senegal and Gambia; the kingdom of the Seratic, on the lower part of the Senegal; Masina, on the Niger, between Bambarra and Tombuctoo; and Wassela, S. of the upper part of the Niger. Besides these kingdoms, in which they hold the entire sovereignty, detached districts of all the kingdoms in this part of Africa, are occupied by Foulahs, who pay to the sovereign a rent or tax for the use of the land. The Foulahs are of a graceful and manly form, and of a peculiarly polished and insinuating air. They are Mahometans, but do not observe the rules of that religion with strictness. The employment is chiefly pasturage. They are celebrated for the mildness and gentleness of their demeanour; so that in many parts of Africa, it is considered infamous to injure a Foulah. They are hospitable, humane, and industrious.

Fox river, Illinois, falls into the Wabash, 15 m. above its mouth.

Fox river, a large river, which falls into the S. W. end of Green Bay, in Michigan Territory. It is one of the best routes of communication between the lakes and the river Mississippi. From the mouth of the river, for about 20 miles, there are some obstructions in the navigation, but boats surmount these, and ascend to the portage 180 miles. The portage between Fox and Ouisconsin rivers is 1½ miles, over a level prairie, which is sometimes inundated, and passed in boats. Fox river, in its course, expands into many large lakes, the largest of which is Winnebago. In some of these lakes, and in many parts of the channel of the river, wild rice abounds. Several villages of the Winnebago Indians are scattered along the banks of the river. The mouth of the river is 400 yards wide, and 3 fathoms deep. Here is a fort, (see *Fort Howard*,) and a settlement of whites, (see *Green Bay*.) The N. fork of Fox river, and also the du Loup one of its northern branches, are connected by short portages, with the rivers of Lake Superior.

France, country, Europe, bounded N. W. by the English channel; N. E. by the Netherlands; E. by Germany and Switzerland; S. E. by Italy; S. by the Mediterranean and Spain; and W. by the bay of Biscay. It lies between 43° and 51° N. lat. and is particularly fortunate in its frontier, having strong natural barriers in the Pyrenees, the Alps, the ridge of Jura, and the Vosges; it is open only on the side of the Netherlands. Its length, from E. to W. is 650 miles; its breadth, from N. to S. about 500; its superficial extent about 200,000 sq. miles, or 128,000,000 acres.

Before the revolution, France was divided into 32 provinces. Different provinces had different rates of taxation, and custom-houses were erected along the frontier roads, as if they had been distinct governments. All these are now done away, local privileges are abrogated, taxes equalized, and the whole country divided into departments, with similar rights and privileges. Each department is divided into arrondissements, each arrondissement into cantons, and each canton into communes. The number of departments (including Corsica) is 86, of arrondissements, 368, of cantons, 2,669, of communes, 38,990. The foreign possessions of France are in the W. Indies, Martinique, Guadeloupe, and Cayenne; in Africa, Goree, and the factories at the mouth of the Senegal; in the Indian ocean, the isle of Bourbon; on the mainland of India, Pondicherry and some smaller factories.

In regard to climate and soil, France, though on the whole a favored country, labors under many inequalities. The principal productions in the north are wheat, barley, oats, pulse, and potatoes; in the south, corn, particularly maize, also vines, mulberries, and olives. The annual produce of the iron mines is computed at 200,000 tons a year. Coal mines are not wanting, but the common fuel is wood. Notwithstanding the wars and civil troubles of the revolution, the population has been in a state of progressive increase: in 1789, France contained 26,300,000 inhabitants, in 1805, 27,700,000; and in 1817, above 29,000,000.

The constitution of France, since 1814, resembles in its forms that of Britain, the king being a limited monarch, and infallible in the eye of the law, the responsibility for public measures resting with his ministers. The royal title is king of France and Navarre; and females are still excluded from the succession to the crown. The French cabinet consists of the keeper of the seals, the ministers of foreign affairs, of finance, of police, of war, of the navy and colonies, of the home department, and the head of the king's household. The royal prerogative is nearly the same as in England; but in France, the king exclusively has the right of bringing in bills in parliament. The chamber of peers comprises above

200 members, who possess privileges similar to those of the peerage in England; their number is unlimited: the grant of titles is vested in the king; the dignity hereditary. No clerical dignitaries have seats in the legislature. The house of commons, or chamber of deputies, are elected by the people: the number returned may in some measure be altered at the will of the king; at present it is only 256. The only qualification for a voter is the payment of 12*l.* of annual taxes. For a deputy, the requisites are, that he shall be of the age of 40, and pay taxes to the amount of 40*l.* a year. One fifth of the chamber of deputies is re-elected annually, the whole being thus changed in five years. There is considerable freedom of the press in France, with the exception of the newspapers, which are subjected to the previous inspection of government officers.

The French funds have risen very considerably since 1815, though they are still greatly below the price of stocks in England and Holland. The national debt amounts, after completing the contributions to the allies, to nearly 200 millions sterling. The annual expenditure is 29,394,000*l.*; of which sum 11,500,000 are on account of the national debt, 7,000,000 for the army, and 2,000,000 for the navy.—The revenue is 30,380,000*l.*; of which about 10,000,000 arise from a tax on houses and lands, 7,000,000 from a tax on sales of lands and houses, and only 1,600,000 from customs.—The following computation of the rent of land and houses in France, is founded on an official report made to the French government in 1817. France contains, exclusive of Corsica, 128,172,992 English acres. Of these, the following are liable to taxation:

	<i>Eng. acres.</i>	<i>Rents.</i>
Arable land, -	55,600,000	£ 24,007,640
Land in underwood,	12,656,790	2,938,520
Meadow land, -	8,612,345	7,390,400
Pasture land, - -	8,703,703	1,812,800
Vineyards, - -	4,881,431	3,442,560
Land in orchards,	886,419	1,071,480
Forest land, - -	1,135,800	201,520
Total rent of land, -		£40,864,920

The remainder is either wholly uncultivated, or so little productive as not to be subject to taxation.

<i>Buildings liable to taxation.</i>	<i>Rents.</i>
Dwelling-houses, small and great, - - -	5,431,000 £ 20,207,720
Mills, - - -	76,000 738,000
Manufacturing establishments, - - -	35,600 300,360
Churches and other buildings not liable to taxation, - - -	58,000

The French army, which under Bonaparte was in peace above 400,000, and in war nearly 600,000 effective men, is now on a very different footing: many of the old soldiers perished in the disastrous years of 1812, 1813, 1814, and 1815; others received their discharge, in consequence of their attachment to their late commander; and considerable difficulty has been experienced in carrying the army to a peace establishment of 120,000 men. The total military force, legions, guards, and artillery, is about 90,000 men. The navy consists of about 40 ships of the line, and 40 frigates. Brest and Toulon are the great naval ports, but Roche-

fort is likewise a station of consequence, as is also Cherbourg, since the immense expenditure on its basins and docks.

The inhabitants of France are Catholics, with the exception of from two to three millions of Protestants, and about 60,000 Jews. Before the revolution, there were 18 archbishops, and 112 bishops: these were subsequently reduced to 9 archbishops, and 41 bishops. It is now in contemplation to increase their number.—Before the revolution, there were in France, 23 universities. The present plan of education embraces a regular gradation of schools, from universities down to primary schools. The following is the return made in 1815, of the public seminaries and number of pupils throughout France:

	<i>Seminaries.</i>	<i>Pupils.</i>
Universities, - - -	26	6,329
Lycées, or royal colleges, - -	36	9,000
Secondary schools, - -	388	28,000
Divinity schools of the 2d class, -	41	5,233
Boarding schools, - - -	1,255	39,623
Primary schools, - - -	22,300	737,379

Literary associations are very numerous in France: at the head of these stands the institute at Paris, divided since 1815 into 4 academies.

The chief commercial harbors of France are Bourdeaux, Marseilles, Nantes, Havre de Grace, St. Maloes, and L'Orient. Marseilles trades partly with the West Indies, more with the Levant; Bordenaux with the East and West Indies, and with the north of Europe, to a great extent in wine. Nantes has also a share of the colonial and wine trade. Havre is the seaport of Paris. The other ports are inconsiderable.—In manufactures, the French have long been noted for the durability and fineness of their woollens: linen is also a staple article, particularly in the north of France. In hardware they are greatly deficient; but in silk they support, particularly at Lyons, their former reputation. The cotton manufactures are of late introduction, and maintain with difficulty a competition with England. There is very little paper money in France; almost all business being transacted by gold and silver.

France, Isle of, before the revolution, a province of France. It comprised Paris, and is now divided into the departments of the Aisne, Oise, Seine, Seine-and-Oise, and Seine-and-Marne.

Franconia, p-t. Grafton co. N. H. 14 m. N. E. Haverhill. Pop. 373. There are two manufactures of iron in the N. W. part of this town, on a branch of the Ammonoosuck river. The New-Hampshire Iron Factory Company was incorporated in 1805, and is composed principally of Boston and Salem gentlemen. Their establishment is very extensive, consisting of a blast furnace, an air furnace, a steel furnace, a forge and a trip-hammer shop. About 12 or 15 tons of iron are made in a week. The ore is obtained from a mountain about 3 miles from the furnace, and is considered the richest in the United States; and the mine is said to be inexhaustible. There is also a large bed of coal belonging to the company within a short distance of the works. The other factory belonging to the Haverhill and Franconia Company is not so extensive.

Friesland, a name which in former ages comprised all the country from the Scheldt to the Weser, including not only the seven united provinces, but a part of Germany. At present the name is applied to two distinct territories, called East and West Friesland, one in Germany, the other in Netherlands, and separated from each other by the province of Groningen.—West Friesland is a province of the Netherlands, having the Zuyder Zee on the W. and the German ocean on the N. It contains nearly 1200 sq. miles, and 176,500 inhabitants. Like the rest of the Netherlands, it is secured against the sea by large dykes. The land is much fitter for pasture than tillage.—The German principality, called East Friesland, forms the N. W. part of the kingdom of Hanover. Its extent is 1,155 sq. miles. Pop. 120,000. Towards the sea it is low and swampy, but is secured from inundation by large dykes. It formerly belonged to Prussia, but in 1814 was ceded to Holland.

Genève, city, Switzerland, and the capital of a small canton, is situated at the W. extremity of the lake of Geneva, on the confines of France and Savoy. The Rhone divides it into two parts. The public buildings are the Hotel de Ville, the arsenal, the college, the public library, the hospital, the theatre, and the cathedral. The public library was founded at the time of the Reformation; it now contains 50,000 volumes, and at stated times is open to the public. Nothing can be more agreeable than the environs of Geneva, or more magnificent than the prospect which it enjoys. The lake, the hills, the distant Alps covered with eternal snow, and above all, Mont Blanc, rearing its

lofty head to the clouds, give a wonderful beauty and sublimity to the prospect. The number of inhabitants is 22,800. This population would naturally place it among European towns of the third or fourth rank, but it has acquired a celebrity equal to that of the first capitals. It owes this high degree of reputation principally to its industry, and the civil and religious habits and institutions of its people. The great occupation of the inhabitants, is watch-making, which employs nearly 7,000 individuals; and a great part of the continent is supplied with watches from this place. Education has always been conducted here with the greatest care. Here are a public school and a university; the former conducted by 11 masters, and the university by 22 professors; the number of students is generally 1,000. 42 m. N. Chambery, 70 N. E. Lyons. Lon. 6° 9' E. Lat. 46° 12' N.

Genève, a canton of the Swiss confederation, admitted in 1814. It is composed of the city of Geneva, and an adjacent territory, containing together 47,000 inhabitants.

Genève, Lake of, a celebrated lake in the form of a crescent, between Switzerland and Savoy, and occupying a part of the great valley which separates the Alps from the Jura ridge. Its length is 50 miles; its greatest breadth 10. It is never frozen, and its water is beautifully clear, except at the influx of the muddy current of the Rhone. The scenery all around is most magnificent, the N. side being fertile and beautifully diversified, while the S. side rises gradually, until its mountains form the highest of the Alpine range.

Genève, p-v. in Seneca, Ontario co. N. Y. on the W. side of Seneca Lake, near the outlet, 16 m. E. Canandaigua, 95 W. Utica, 192 W. Albany. The lake is here 3 miles wide. The village of Geneva is built with much taste and beauty on the sides and summit of a hill which rises about 200 feet above the surface of the water, and commands a fine view of the lake, and of the fertile and populous country on its borders. The village is incorporated and enjoys an extensive trade. It contains a bank, an academy, a glass house, and 3 churches, 1 for Episcopalians, 1 for Presbyterians, and 1 for Dutch Reformed. Two newspapers are printed here. Pop. 1,357.

Genoa, a maritime city in the N. W. of Italy, once a celebrated republic, now the capital of a province of the Sardinian States, on the gulf of Genoa. It is surrounded by a double wall, and is a place of great strength. When viewed from the harbour, Genoa and its environs present the form of an amphitheatre. The white buildings, erected on successive terraces, contrasted with the na-

ked appearance of the Appennines, give the town an air of great magnificence. The houses are well built, but the streets are narrow and irregular. Three streets, however, the Strada Balbi, the Strada Nuova, and the Strada Nuovissima, are regular and spacious, and contain the palaces of the great families. Among the public edifices are the Palazzo della Signora, the ancient residence of the doge; the great hospital, the cathedral, and several churches which are regarded as masterpieces of architecture. The harbour of Genoa is inclosed by 2 strong moles, and can admit ships of 80 guns, but the entrance is difficult. Genoa exports rice and fruit, and in particular olive oil, to a great annual value; also her own manufactures, viz. silks, damasks, and velvets; for the last, Genoa has long been celebrated. The yearly value of the different silk and satin manufactures is from 200,000*l.* to 300,000*l.* The chief business is carried on under foreign flags, from a dread of the Barbary corsairs. This city is the see of an archbishop. The established religion is Catholic. Here are an university, an academy, and a public library. Pop. 76,000. 77 m. S. E. Turin, 73 S. Milan, 450 S. E. Paris. Lon. 8° 58' E. Lat. 44° 25' N.

George, Lake, a beautiful lake, 36 miles long, and about 2 broad, between Washington and Warren counties, N. Y. It lies S. of Lake Champlain, and communicates with it by an outlet 3 miles long, in which distance the water descends nearly 100 feet. The lake is surrounded by high mountains, and is much celebrated for the romantic beauty of its scenery. The water is deep, remarkably transparent, and abounds with the finest fish. Salmon-trout are taken, weighing upwards of 20 pounds. There are numerous small

islands in the lake, on some of which are found crystals of quartz, hardly surpassed by any in the world, for transparency and perfection of form. Lake George was long conspicuous in the wars of this country, and several memorable battles were fought on its borders. It formed the most convenient connexion between Canada and the Hudson, and hence the establishment of Fort William Henry, in 1755, at the head of the lake, and in more recent times, of Fort George, in its immediate vicinity. The remains of the fortifications are still visible. Lake George is a fashionable resort in summer, in connexion with Ballston and Saratoga. Lon. 73° 25' to 73° 43' W. Lat. 43° 25' to 43° 55' N.

Georgia, p-t. Franklin co. Vt. on Lake Champlain, 18 m. N. Burlington. Pop. 1,703.

Georgia, one of the U. States, bounded N. by Tennessee and North Carolina; N. E. by South Carolina; S. E. by the Atlantic; S. by Florida, and W. by Alabama. It extends from lat. $30^{\circ} 20'$ to 35° N. and from lon. 81° to $86^{\circ} 43'$ W. It is 300 miles from N. to S. and 240 from E. to W. and contains 50,000 square miles, or 37,120,000 acres. Pop. in 1790, 82,548; in 1800, 162,686; in 1810, 252,433; and in 1820, 340,989; of whom 149,676 were slaves. Engaged in agriculture 101,185, in commerce 2,139, in manufactures 3,557. This population is confined to the eastern part of the State. The western part is in possession of the Indians, viz. the Creeks and Cherokees. The Indian country lately embraced more than 40,000 square miles, or two thirds of the whole State, but by the treaty of Fort Jackson, the claim of the Creeks was extinguished to more than 11,000 square miles in the southern part of the State, including the whole country below the parallel of $31^{\circ} 35'$. The Creeks now own in this State about 15,000 square miles, lying on the head waters of Flint river, between the Oakmulgee and Chatahoochee rivers. The Cherokees lately possessed about 16,000 square miles in the northern part of the State, but in 1819, they ceded a large district of it to the United States.

From the ocean, for the distance of 7 miles, there is a margin of islands and marshes, intersected by rivers, creeks, and inlets, communicating with each other, and forming an inland navigation for vessels of 100 tons, along the whole coast. These sea islands consist of salt marsh, and of a species of land called hammock, which produces the black seed cotton, of a superior quality. A narrow margin on the coast of the main, consists also of salt marshes and hammock lands. Immediately back of this are the pine barrens, interspersed with numerous inland swamps. The riv-

ers and creeks have also near their mouths marshy lands called brackish swamps; and higher up, river-tide swamps, which are entirely fresh. Both of these, and the salt-marshes, are overflowed partially or wholly, at the return of the tide. The pine barrens reach from 60 to 90 miles from the coast. Beyond this commences a country of sand hills, from 30 to 40 miles wide, interspersed with fertile tracts, and extending to the falls of the rivers. The part of the State above the falls of the rivers is called the Upper Country, and has generally a strong, fertile soil. Cotton is the principal production of Georgia. It is of two kinds; the black seed, or sea-island, and the green seed, or upland. Rice is extensively cultivated in the swamps of the low country. The fruits are figs, oranges, melons, pomegranates, olives, lemons, &c. The forests afford fine timber, chiefly oak and pine, for exportation.

The principal islands on the coast are Tybee, Ossabaw, St. Catharine, Sapelo, St. Simon's, and Cumberland. The principal rivers are Savannah, Ogechee, Alatamaha, Satilla, St. Mary's, Flint, Chatahoochee, Coosa, Oconee, and Oakmulgee. Savannah and Darien are the principal ports. Milledgeville is the seat of government. The other principal towns are Augusta, Sunbury, St. Mary's, Petersburg and Athens.

The university of Georgia consists of a college, called Franklin College, established at Athens, and of an academy, either established or to be established in each county. This body of institutions is under the direction of a *Senatus Academicus*, consisting of the Governor and Senate of the State and 15 trustees. The *senatus academicus* appoints a board of commissioners in each county, to superintend the academy of the county and the inferior schools. In 1817, \$200,000. were appropriated by the Legislature for the establishment of free schools throughout the State. For judicial purposes, the State is divided into four districts, Eastern, Middle, Western, and Southern. The Baptists and Methodists are much the most numerous religious denominations. The Legislature consists of a senate and house of representatives, chosen annually by counties. The governor is chosen for two years.

In 1817, Georgia was the sixth State in the Union in the value of her exports. The amount was \$8,790,714, and consisted almost wholly of domestic produce. The staple of the State is cotton. The amount of shipping in 1815, was only 15,590 tons.

Germany, country, Europe, bounded N. by

Denmark and the Baltic, E. by Poland, S. by Hungary and Italy, and W. by Switzerland, France, and the Netherlands. It is 650 miles from N. to S. 600 from E. to W. and contains 220,000 square miles. The northern part is a flat country.—Southern Germany is more diversified consisting in part of extensive plains, but traversed also by vast ranges of mountains. Few countries are more fortunate in great rivers, it being computed that no less than sixty are navigable to a great extent, while six, viz. the Danube, the Rhine, the Maine, the Weser, the Elbe, and the Oder, rank among the noblest and largest in Europe. The climate is healthy. The soil is various; sandy plains and barren heaths abound in the N. E. swamps and marshes in the N. W.; but many of the interior and S. W. parts are uncommonly fertile.

No language in Europe is spoken by so great a population as the German; it is current not only in Germany, but in part of France, Switzerland and Hungary; in Livonia, Esthonia and Courland.—There are 21 universities, of which 13 are Protestant, 8 Catholic, and 2 partly Catholic and partly Protestant. The total number of students at these seminaries is between 8,000 and 9,000; Göttingen is the most numerously attended, having above a tenth of the whole. Göttingen, Halle, Jena, and recently the university of Heidelberg, are allowed to stand in the first rank. The numbers of the various religious denominations are as follows: Catholics 15,000,000, Lutherans 12,000,000, Calvinists 2,300,000, Jews 183,000, Heretics 25,000, Greek church 14,000.

Germany was formerly an empire, and consisted of above 300 secular and ecclesiastical princes, each independent in the administration of his own territory, but subject to the emperor as head of the empire. It was divided into 10 circles: Austria, Burgundy, Upper Rhine, Lower Rhine, Franconia, Bavaria, Swabia, Westphalia, Upper Saxony and Lower Saxony. During the late wars in Europe, the empire was dissolved, and the number of independent principalities reduced from 300 to little more than 30. In 1815, a new confederation was formed, called 'the confederation of the sovereigns and free towns of Germany.' The names of the States, the number of votes to which each is entitled in the general assembly, and the revenue and population of each are given in the following table:—

The diet is permanent, and the sessions are held at Frankfort on the Maine. In all ordinary concerns, the eleven larger states are each entitled to one vote, and the smaller states are divided into six classes, and each class has one vote. But when fundamental laws are to be enacted, and in some other questions of prime importance, the diet resolves itself into the general assembly, in which each state has the number of votes mentioned in the table. The military contingent of the federative body, in time of peace is 120,000 men, of whom 96,000 are infantry, 18,000 cavalry, and 6,000 artillery. In war, the contingent is one in 100 on the population, making a total of 301,000, with a reserve force of one in 200.—The great fortresses essential to the defence of the empire in Mentz, Luxemburg, and Landau, are declared to belong to the confederation. Germersheim, important as commanding the passage of the Rhine, is to be made a place of great strength; also Homburg, between Luxemburg and Landau. Ulm is likewise to be made a fortress of the first rank, and the sum of £800,000 was voted by the diet in 1818 for completing its fortifications.

Gibraltar, a well known promontory in the S. of Spain, on the straits which connect the Atlantic with the Mediterranean. It consists of a great rocky mountain, running from N. to S. about 3 miles long, from a half a mile to three fourths wide, and from 1,200 to 1,400 feet high. On the N. side is an isthmus, about 1½ miles long, and half as much broad, which connects this vast mass of rock with the continent. The N. front of the rock is almost perpendicular; the E. side is full of frightful precipices; while the S. being narrow and abrupt, presents hardly any possibility of approach. On none of these sides has this tremendous mass ever been attacked. The W. front is almost as abrupt as the others, but on this side it is most vulnerable, and here are the great batteries and works of defence. The importance of Gibraltar arises chiefly from its bay, which is of great extent, and forms a convenient naval station, being protected from the more dangerous winds. Gibraltar was first fortified in the modern style in the reign of the emperor Charles V. It was taken by the English in 1704; it has since been repeatedly besieged (first in 1705, next in 1727, and lastly in 1779,) but always without success. The town of Gibraltar stands at the foot of the promontory, on the N. W. side. The population, exclusive of the garrison, is above 12,000, partly British, Spaniards, Italians, Jews, and even Moors, all attracted by mercantile enterprise. The trade of the place embraces a great variety of articles. The support of this post is very expensive to Great Britain. Excavations of great extent have been made by gunpowder, to establish communications between the different posts, and enable them to be relieved without a loss of lives from the enemy's fire. 16 m. Glasgow, city, Scotland, in Lanark co. long distinguished for its extensive commerce and manufactures. It is on the Clyde, which is navigable to the city for vessels drawing 7 or 8 feet of water. There are many magnificent public buildings in Glasgow, of which the cathedral, or high church, is the chief. There are several charitable establishments, and 35 places of public worship. The university of Glasgow was founded in 1450, and at present, consists of a lord chancellor, lord rector, dean of faculty, the principal, and 17 professors. At present there are about 1,400 students. Exclusive of a valuable and extensive library. founded upwards of two centuries ago, in which there are many very rare books; the celebrated Dr. William Hunter of London, bequeathed his whole museum, one of the most valuable collections in Europe, of natural history, paintings, medals, anatomical preparations, books, &c. A very useful institution was founded in 1796, by the late Mr. Anderson, with a view to afford a regular course of instruction to those persons who do not intend to enter any of the universities. Courses of popular lectures are given on natural and experimental philosophy, mathematics, chemistry, botany, and natural history. There is a class for mechanics, which is most numerously attended, in which the above sciences are taught at a very moderate rate.

The situation of Glasgow is singularly favorable for trade, placed on the borders of one of the richest coal and mineral fields in the island, while the Atlantic opens to it on the one hand, through the river Clyde, and the North Sea on the other, through the Forth and Clyde canal and the frith of Forth. Among other works belonging to Glasgow, are 52 cotton mills, containing 511,200 spindles, and employing a capital of 1,000,000*l*; 18 works for weaving by power, which contain 2,800 looms, producing 8,400 pieces of cloth weekly; 17 calendar houses, who have 39 calendars moved by steam; these calendar daily 118,000 yards of cloth, besides dressing 117,000, and glazing 30,000 yards. There are 18 calico printing works; 9 iron foundries; and 73 steam engines. The communication of Glasgow with the country along the shores of the Clyde, has been greatly aided by steam-boats, of which there are now 16 plying on the Clyde. Pop. in 1780, 42,832—in 1785, 45,889—in 1791, 66,578,—in 1801, 83,769,—in 1811, 110,460,—in 1818, estimated at 120,000. Lon. 4° 15' 51" W. Lat. 55° 52' 10" N.

Gotha, Saxe, a duchy of Germany, composed of the principality of Gotha, the greatest part of the principality of Altenburg, and a part of the former county of Henneberg. It contains 1,400 sq. miles, and 185,682 inhabitants. The form of government is by no means absolute. The executive power rests with the duke and his privy council, but a diet is held once in four years, consisting of deputies from the landed proprietors and inhabitants of towns. This state is one of the members of the Germanic confederation and has a vote at the diet of Frankfort. The inhabitants are in general Lutherans.

Gotha-Elf, r. in the S. W. of Sweden, which forms the outlet of Lake Wener, and falls into the Cattegat by two mouths near Gottenburg. It has been made navigable by locks and canals to Lake Wener, and it is the intention of the Swedish government to prolong this line of navigation by the Wetter and other lakes, and thereby form a direct communication between the German ocean and the Baltic, passing through the centre of the kingdom. Clara Elf is the name of a river which falls into Lake Wener on the N. side.

Gothland, formerly the name of the southern and most fertile division of Sweden, comprising

nearly all the country below the parallel of 59° N. lat. It was divided into East, West and South Gothland. It has been recently divided into provinces. Its extent was about 40,000 square miles. Pop. 1,500,000.

Gothland, Gottland, or *Wisby*, one of the new provinces of Sweden composed of the island of Gothland and the surrounding islands. It produces corn, and has excellent pasturage. Here are also extensive woods of oak and pine. The fisheries on the coast are productive, and prosecuted with activity. Sq. miles 1,078. Pop. 33,000. Wisby is the capital. Gottenburg, a large and thriving t. in the S. W. of Sweden, near the mouth of the Gotha-Elf, in a marshy plain, surrounded by precipitous ridges of naked rocks. The harbor is the most conveniently situated for foreign trade in Sweden. As a commercial and manufacturing town, Gottenburg ranks next to Stockholm. It is the seat of the Swedish East India Company, which was erected in 1731, and has the exclusive privilege of importing East India commodities into the kingdom. The fortifications of the town have been lately demolished; 40 m. S. of Uddevalla. Lon. $11^{\circ} 57'$ E. Lat. $57^{\circ} 42'$ N. Pop. 24,000.

Gottingen, a province in the south of Hanover, bounded by Brunswick, Hildesheim, the Prussian states, and Hesse-Cassel. It was constituted a province in 1816, and includes several distinct tracts of country, viz. the quarter of Gottingen, the principality of Grubenhagen, Elbingeroda, Hohenstein, the bailiwicks of Plesse, and Gleichen, with the small portion of the Fichsfeld ceded by Prussia. Extent, 1,225 sq. miles. Pop. 176,000, chiefly Lutherans.

Gottingen, t. Hanover, and cap. of the province of Gottingen. It stands in a pleasant valley on a canal branching from the Leine. Its chief title to notice arises from its celebrated university founded by George II. in 1734. It is on a very comprehensive plan, embracing the four faculties of divinity, philosophy, law and medicine. The number of professors is not fixed, but in general exceeds 40. In 1818 they were as follow:—3 of Theology; 7 of medicine, surgery, chemistry and botany; 7 of law, viz. Roman, German, ecclesiastical, &c.; 5 of Classics and Oriental languages; 4 of History, ancient and modern, statistics and history of literature; 2 of mathematics, logic and metaphysics; 4 of astronomy, experimental philosophy, and mineralogy; 3 of modern languages and literature. These are the regular and daily lecturers, but there are also 7 professors who give extraordinary lectures. There is a class for political economy; and for theology there are in addition to the 3 chairs, a seminary for preachers, a pastoral institute, and a divinity college. In 1751, an academy of sciences was established here,

to which the scientific world is indebted for many valuable improvements and discoveries. It was re-organized in 1770, and now consists of 3 classes, the mathematical, physical, and historical. The professors, as in the other German universities, are much in the habit of publishing: Mosheim, Michaelis, Heyne, Burger, were all of Göttingen; also Eichhorn, so well known for his history of literature, Blumenbach and Villers. The number of students here is greater than in any other German university. It varies from 1,000 to 1,200. Attached to the university are 140 bursaries, or free boards for the poorer students. But the great attraction of the university is its library, founded by George II. and consisting in a larger proportion than the great repositories of England or France, of modern and useful books. The number of volumes amounts to about 200,000. This library has two catalogues, one alphabetical, the other classed; both are in manuscript, and the latter is a compilation of great labour and extent. The regular funds for the purchase of books are about £800 sterling a year. Göttingen is the occasional resort of young Englishmen, and no place is better adapted for the purpose of education. There are in Göttingen four Lutheran and two Calvinist churches; also a Catholic chapel. A serious difference took place between the students and the inhabitants of the town in October 1818; the Hanoverian government took part with the latter, and though some diminution took place in the number of students, it was considered as only temporary; 21 m. N. E. Cassel, and 51 E. S. E. Paderborn. Lon. $9^{\circ} 55' 15''$ E. Lat. $51^{\circ} 31' 54''$ N. Pop. 9,500.

Granada, a celebrated city, Spain, cap. of the province of Granada. The situation is highly romantic, partly on hills, partly on level ground. The streets are narrow and irregular and the

buildings display visible marks of decay. The cathedral, and the archbishop's palace, are splendid buildings. But the grand ornament of Granada is the Alhambra, the palace of the ancient Moorish kings: the buildings are very extensive, and form more properly a citadel than a palace.—Granada fell into the possession of the Moors soon after their first invasion of Spain in 711; it became a royal residence in 1013, attained its greatest prosperity in the 12th and 13th centuries, and finally surrendered to the Spaniards in 1492. The manufactures are silk and woollen goods, leather, saltpetre, and gunpowder. Granada is the seat of a great central court of justice for the south of Spain, and of a university. 123 m. E. Grebná, t. Eu. Turkey, in Thessaly, 50 m. N. by E. Joannina, 56 S. W. Salonica.

Greece, a name applied to that part of Europe inhabited by the descendants of the ancient Greeks. The continental part embracing that portion of Turkey, which lies south of the parallel of $41^{\circ} 30'$, is a peninsula, jutting out into the Mediterranean, and separated by the Ionian sea from the peninsula of Italy on the west, and by the Archipelago, from Asia Minor on the east. In the former sea are situated the Seven Islands, constituting the Ionian republic; in the latter, about 100 islands of various size. All these may strictly be considered as a component part of Greece. Near the southern extremity of the peninsula, is the sub-peninsula of the Morea, (the ancient Peloponnesus,) connected with the main land by the narrow isthmus of Corinth. The whole extent of Greece is estimated at 40,000 sq. miles; and the population at 4,000,000, of which number 3,000,000 are Greeks, and the rest Turks, Jews, &c.

Down the middle of the peninsula, and parallel to its two coasts, runs a continuous range of lofty mountains, varying in height from 7 to 8,000 feet in the northern and central part, to as many hundred near the southern extremity. Of the former height may be reckoned the ridge of Pindus and Parnassus, while Parnes, Pentelcus, and Hymettus in Attica, do not exceed the latter. Branches are thrown off towards either coast from this central chain; to the eastward, the celebrated Olympus, rising near the head of the gulf of Salonica, to the height of 6,000 feet, forms the north extremity of an inferior chain, consisting of Ossa and Pelion, Eta and Othrys, and continuing in a S. E. direction through the island of Negropont. To the westward of the main range are the rugged and mountainous countries of Epirus, Ætolia, and Acharmania. The highest mountains of the Morea are the Cyllenian range, near the west coast, and the Taygetus near the S. extremity. Extensive plains of considerable elevation above the level of the sea, are encircled by the mountain ranges. Of these, Thessaly, Boeotia, and Arcadia, still preserve their ancient character. The rivers by which these plains are watered are little more than mountain streams, with the exception of Peneus, or Salymphria, whose numerous branches, after intersecting the plain of Thessaly, unite and

discharge themselves through the celebrated defile of Tempe into the gulf of Salonica, and the Alpheus, which waters the verdant plains of Arcadia and Elis.

The climate of Greece is more severe in winter, and in many parts warmer in summer, than that of the South of Italy. On the elevated plains of the Morea, snow sometimes covers the plain of Tripolitza, to the depth of 18 inches. In the lower region of Attica, the atmosphere is more moderate and equable than in most other parts of Greece, the air being generally clear, dry, and temperate. The general produce of the plains of Greece is wheat, barley, rice, maize, millet, and tobacco. In Boeotia, the soil is very rich. On the plains of Thessaly, are cultivated extensive groves of mulberry-trees, for the silk worm. The Morea is celebrated for the excellence of its silks, and all the accounts given by the ancient Greeks, of the fertility of Messenia, in the S. W. corner of the Morea, are realized at this day in every species of produce more especially in corn, wine, and figs. The richest produce of Attica, is the olive. Hy-mettus has from time immemorial been celebrated for the excellence of its honey. It is still in such esteem that presents of it are annually sent to Constantinople. The cotton plant is in general cultivation. The sea-coast abounds with a great variety of excellent fish, but the inhabitants are very inexpert fishermen. The numerous gulfs, creeks, bays, and harbours, with which Greece is indented, afford both convenience and security for shipping, and the disposition of the modern Greeks for active and enterprising exertion, gives them a strong bias towards commercial pursuits. There are many wealthy Greek merchants on the continent and among the islands. The Mainiotes, at the southern extremity of the Morea, were daring and resolute freebooters, but their piracies of late years have been greatly checked by habits of industry, and an increasing commerce.

Much has been said of late in Europe of the restoration of ancient Greece, and the Greeks themselves have begun to direct their attention to literary pursuits. The progress made in the last thirty years, in the ancient Greek language, and in general literature, is very considerable; and in the same period, the Romaic, or modern Greek, has made approaches towards the Hellenic. That language, in its worst state, bears about the same relation to the ancient Greek, as the old Italian to the Latin. The Hellenic language is now extensively cultivated both in and out of Greece. With their literary improvement, the desire for the restoration of their independence has been increased, and among the higher class of citizens, there prevails a very acute feeling, at their present degraded state, and a degree of enthusiasm and veneration for their ancient heroes, poets, philosophers, and statesmen, which would do honor to any nation.

Green bay, or *Bay Puan*, a large bay on the W. side of Lake Michigan. It extends from the north end of the lake 90 miles, in a S. W. direction, and is 15 or 20 miles wide. Across its entrance is a chain of islands, called the *Grand traverse*, which shelters the bay from the winds that often blow with violence across the lake. Several of the channels between them are of sufficient depth to admit vessels of 200 tons burthen, which traverse the bay and ascend Fox river several miles. Green bay abounds with fish, particularly sturgeon and white fish. It has several small bays, the principal of which is Sturgeon's bay. The principal rivers which it receives, are Fox and Menominy.

Lon. 87° 58' W. Lat. 45° N. It extends along both sides of the river about 4 miles. Here are about 80 families, the descendants of the French Jesuits, who settled here in 1700; but by intermarriages with the Indians, they have now become, almost without exception, of mixed blood. The country around this settlement is at present chiefly occupied by the Menominee Indians. It has a healthful and sufficiently mild climate, a fertile soil, watered by numerous rivers, and its position between the great Lakes and the Mississippi, renders it a very eligible place for settlement. Greenland, a country, bounded E. by the Atlantic, and separated from Labrador on the S. W. by Davis' straits. It is not ascertained whether it is a peninsula or an island, although the recent discoveries in the Polar regions render it highly probable that it is wholly detached from the continent. It extends as far south as Cape Farewell, in lat. 59° 30' N. Its northern limits are unknown. The eastern coast is commonly called East Greenland, and the western, West Greenland, but the whale-fishers call the whole West Greenland, and apply the name East Greenland to Spitzbergen and the adjacent islands. Nothing is known of this exten-

sive country, but its coast. The interior is wholly inaccessible, on account of the everlasting ice with which its mountains are covered. The eastern coast also has, for centuries, been cut off from European intercourse, by the vast bodies of ice with which its shores are lined. The severity of the climate forbids the growth of every thing but a few stunted trees and shrubs. The whole population does not exceed 20,000; and they are confined to the coast, deriving a miserable subsistence from seals, birds, and fishes; and are sometimes under the necessity of living on sea weed and train oil. The natives were formerly Pagans, and addicted to some cruel customs, but through the instrumentality of the Moravian missionaries they have, to a considerable extent, been converted to Christianity. There are 11 missionaries, in 3 missionary settlements, at New Herrnhut, Lichtenfels, and Lichtenau.

Greenock, the chief s-p. of Scotland, is in Renfrewshire, on the Clyde. The manufactories of the place are sugar-houses, rope-walks, soap and candle-works, tan-works, potteries, bottle and crystal-works, breweries, a sailcloth manufactory; to these may be added ship-building to a great extent, in which the place has long excelled.—Prior to 1697, Greenock was an inconsiderable fishing station, but it is now a flourishing town, and place of good trade. The harbor is very spacious and commodious; within these few years, the quays have been removed farther out to a greater depth of water, and new quays have been built to the eastward of the old harbor, at which there is from 16 to 26 feet water, and from 10 to 15 at low water. It is now capable of containing 500 sail of ships. On the 10th October, 1818, the registered shipping were 40,195 tons. The duties of customs for the year ending 10th October, 1818, were 351,587*l*. Guatemala, *Captain-Generalship of*, one of the Spanish possessions in N. America, extending from New Spain on the N. W. nearly to the isthmus of Darien, and bounded E. by the Caribbean sea, and W. by the Pacific ocean. It consists of 6 provinces, viz. Chiapa, Vera Paz, Guatemala, Honduras, Nicaragua, and Costa Rica. The great American range of mountains runs through the country from S. E. to N. W. Volcanoes are extremely numerous, and some of them terrific; no less than 20 are in constant activity. The general appearance of the soil is extremely fertile, and Guatemala produces abundantly corn, cochineal, grapes, honey, wax, cotton, fine wool, and dye-woods. The population has been estimated at 1,800,000.

Guatemala, a province of the captain-generalship, extends along the coast of the Pacific ocean, and is bounded N. E. by Vera Paz and Chiapa, E. by Honduras, S. W. by the Pacific ocean, S. E. by Nicaragua, N. and W. by Oaxaca.

Guatemala, *Santiago de*, capital of the captain-generalship of Guatemala, was founded, in 1524, on the declivity of a mountain, at whose summit was a volcano; but in 1751, it was overwhelmed by an earthquake, and by the matter from the volcano. Notwithstanding this awful calamity, the city was rebuilt on the same spot; but another and more tremendous convulsion again destroyed the devoted place in 1775, the greater part of the inhabitants being at the same time buried in the ruins. The city now stands 25 miles S. of the old town. It is a magnificent place, adorned with churches and monasteries, and an university, reckoned one of the best in the empire. Pop. 19,000. Guiana, country, S. America, between the Orinoco and the Amazon. It has Caraccas on the N. W. the Atlantic on the N. E. Brazil on the W. and New Granada on the S. W. The river Cassiquari unites the Orinoco with the Negro, a branch of the Amazon, making this country a real island, separated by water from the rest of the continent. Guiana is divided between 5 different nations. 1. *Spanish Guiana* belongs to Caraccas. It extends on the coast from the Orinoco to the Essequibo. 2. *English Guiana* extends from the Essequibo to the Corentin. 3. *Dutch Guiana*, from the Corentin to the Maroni. 4. *French Guiana*, from the Maroni to the Aruary. 5. *Portuguese Guiana*, from the Aruary to the Amazon. The boundaries between these divisions in the interior are not determined, and there is no necessity for determining them, because the white settlements do not extend far from the sea coast, the interior being occupied by war-like Indians. English Guiana is subdivided into the districts of *Essequibo*, *Demarara*, and *Berbice*. Dutch Guiana is sometimes called *Surinam*, and French Guiana, *Cayenne*. The population may be estimated at 250,000, exclusive of Indians. Spanish Guiana has 34,000, English Guiana more than 70,000, Dutch Guiana 80,000, and French Guiana 30,000. The mass of the population are negro slaves; there are less than 20,000 whites. The Dutch colonies, (including English Guiana,) have from the earliest period been exposed to depredations from fugitive negroes, who have fled to the woods from the excessive cruelty of their masters.

The country along the shore and for a considerable way into the interior, is an extensive and uniform plain of unequalled fertility. It is covered with thick forests, even to the water's edge; the coast is so low and flat, that nothing is seen at first but the trees, which appear to be growing out of the water. The country is overspread with the most luxuriant vegetation, abounding in fruits of every description, and an infinite variety of rare and useful plants. The principal articles cultivated are sugar, coffee and cotton.

Malwah and Kandeish, S. by Aurungabad and the sea, and W. by a sandy desert, the gulf of Cutch, and the sea. During the war of 1780, the British got possession of a portion of it. Their territory occupies a considerable tract of country on both sides of the gulf of Cambay, and includes the populous cities of Surat, Broach, Cambay, Kaira, and Gogo. The sea coast between the gulf of Cambay and Cutch is occupied by different independent chiefs, all greatly addicted to piracy. The northern and western borders are also possessed by a number of barbarous chiefs.

Guinea, a name given to a part of the W. coast of Africa, from the Rio Mesurado to the western extremity of Benin, comprehending about 13 degrees of longitude. This territory is usually divided into the Grain coast, the Ivory coast, the Gold coast, and the Slave coast.

The Grain Coast extends from the Mesurado to the village of Growa, about 10 miles beyond Cape Palmas. It yields a coarse species of pepper, but neither gold nor ivory, and has been comparatively little frequented.

The Ivory Coast, extends from Growa, to Cape

Appollonia. It abounds with ivory, but has no harbors, and has never been very extensively frequented.

The Gold Coast extends from Cape Appollonia to the Rio Volta. European settlements and trade have been carried on here to a greater extent than in any other part of Africa. Britain has now a more extensive footing upon this coast than any other nation. Cape Coast castle is the capital of the British settlements; and forts are also maintained at Acra, Dixcove, Sucondee, Commendo, and Anamboe.

The Slave Coast extends from the Rio Volta to the bay and river of Lagos, which separates it from Benin. The British formerly had settlements here, but they have recently been abandoned.

Hague, a large and beautiful town of Netherlands, in S. Holland, 10 m. S. S. W. Leyden, 30 S. W. Amsterdam, and nearly 3 from the sea coast. It is an open town, being surrounded only by a moat with draw bridges. It stands in a dry soil, somewhat higher than the surrounding country. The principal streets are wide, straight and handsome, and it is accounted one of the most elegant towns in Europe. The environs contain a number of villas; but their principal ornament is the rural palace, belonging to the Orange family, above a mile north of the town. The Hague became, so long ago as 1250, the residence of the governors, or counts, of Holland; and since that period, it has been, almost without interruption, the seat of Government. It is now, along with Brussels, the alternate residence of the king and legislature. The manufacture of porcelain, and the printing of books, particularly French books, are the only branches of industry entitled to notice. The Hague never was a place of trade. Pop. in 1817, 42,000. Hamburg, p-t. Stark co. Ohio, 10 m. S. E. Canton.

Hamburgh, a free city, and the greatest commercial town in Germany, is on the N. bank of the Elbe, 78 m. from its mouth, at the junction of the Alster, which comes in from the north. The streets are narrow, crowded, and irregular, and the houses awkward and old fashioned. They are in general of great height, and built of brick and wood. There are, however, exceptions, particularly in the quarter called the New Town, many of the houses being neatly built, and some streets elegant. Hamburgh covers a large extent of ground, but nearly a third of the space included by the walls is occupied by canals, piers, and the basin formed by the Alster. Formerly, brewing was the chief employment here. The refining of sugar employed, in the beginning of this century, more than 300 houses, and is still considerable. The printing of cotton, linen, and handkerchiefs, gives occupation to many hundred workmen. The dye-works and the machinery for twisting tobacco are also of considerable extent. But since 1793, Hamburgh has been gradually exchanging its manufacturing for a mercantile character. It is admirably situated for trade, possessing an extensive water communication with the interior by the Elbe, which is navigable throughout all Saxony, even to Bohemia. The Alster, though far inferior in size, carries boats, with the aid of a canal, all the way to Lubeck on the Baltic. Accordingly, Hamburgh has long been a commercial place of the first importance, particularly during wars among the maritime powers. The vessels which arrive at this port from different countries in the course of a year are about 2,000, more than one-third of which are from Great Britain.—The established religion is the Lutheran, but complete toleration prevails. Here are many patriotic and charitable institutions; and no Protestant city of its size contains a greater number of hospitals. The revenue of the orphan-house is estimated at £6,000 sterling. The town library contains 100,000 volumes, but is deficient in late publications. The city revenue is more than £150,000. The territory of Hamburgh embraces about 133 square miles. It consists of a small district lying around the city, of the town and bailiwick of Cuxhaven at the mouth of the Elbe, and of some villages scattered in the dutchy of Holstein. Hamburgh is connected with Frankfort, Lubeck, and Bremen, in some commercial regulations; and they still retain the old name of Hanse-towns. The Congress of Vienna gave Hamburgh a vote in the Germanic diet, in conjunction with Frankfort, Lubeck, and Bremen. It stands 39 m. S. S. W. Lubeck, 84 N. Hanover, 448 N. E. London. With the exception of the Hartz, and other elevated tracts which occupy part of the south, the territory of Hanover consists of an immense plain with gentle undulations. In the south, the vallies are fertile; in the north there are many barren heaths and moora. The chief exports are coarse linen, iron and copper from the Hartz, timber, horses, and black cattle. The revenue amounts to a million sterling. The public debt does not exceed a million and a half sterling. The Lutheran is the prevailing religion in Hanover, but complete toleration is granted to all sects. The Calvinists amount only to 40,000, and the Catholics to 150,000. The number of Jews is between 8,000 and 9,000. The principal literary institution is the university of Gottingen, esteemed one of the first establishments of the kind in Europe. The king of Great Britain is also king of Hanover, but the two countries are politically distinct. There have in fact been several instances of the same prince making peace with an enemy in the capacity of elector of Hanover, while the king of Great Britain continued at war; and, in the convention of 26th August, 1815, for keeping up an army on the French frontier, the king of Great Britain bound himself, in due diplomatic form, to pay a subsidy to the king of Hanover. At the diet of Germany, the king of Hanover occupies the fifth rank, taking precedence of all except Austria, Prussia, Bavaria, and Saxony. He has four votes at the general assembly. The crown is hereditary in the order of primogeniture, and the succession is limited to the male line. The king's power has a counterpoise in the states, which consists of the Wolfenbuttel nobility, the heads of the church, and the deputies of the towns. No tax can be levied, nor new law made, without the consent of the states. The government was formerly conducted by a council of regency, but recently a viceroy has been appointed.

Hanover, city, Germany, capital of the kingdom of Hanover, is on the Leine, a navigable river, which afterwards joins the Weser. It is separated by the river into two parts, called the old and new town. The elector's palace, where the regency formerly resided, is a large edifice, and is now receiving improvements, which will render it an elegant building; meantime, the viceroy, (duke of Cambridge) occupies a handsome mansion in the immediate vicinity. The public library, founded by Leibnitz, is also a good building. There are 5 Lutheran churches; the Calvinists and Catholics have each their chapels, and the Jews have a Synagogue. The inhabitants derive their chief support from the presence of the court. 28 m. W. Brunswick, 154 W. Berlin. Lon. 9° 42' E. Lat. 52° 22' N. Pop. 25,000.

Hanover, p-t. Grafton co. N. H. on the E. bank

of Connecticut river, 55 m. N. W. Concord, 98 W. N. W. Portsmouth, 115 N. W. Boston. Pop. 2,222. The town contains 4 houses of public worship, 3 for Congregationalists, and 1 for Baptists. The principal village is situated in a beautiful plain, about half a mile from the river, and contains the buildings of Dartmouth College, and about 60 dwelling-houses.

Dartmouth College derives its name from William Earl of Dartmouth, one of its principal benefactors. It was founded in 1769, by the late Rev. Dr. Eleazer Wheelock, and is one of the most respectable and flourishing colleges in the United States. The permanent funds yield about \$2,000 a year. This, with the tuition, makes an income of nearly \$6,000. The college edifice is of wood, 150 feet long, 50 wide, 3 stories high, and contains 36 rooms. A Medical Institution has been connected with the college since 1797, and is accommodated with a brick edifice, containing besides rooms for students, a laboratory, an anatomical museum, and 2 lecture rooms. The college library contains about 4,000 volumes, and there are 2 libraries belonging to societies of students, each of which contains nearly 2,000 volumes. The chemical and philosophical apparatus are valuable. The officers of the college in 1821, were a president, 8 professors, including 3 medical professors, and 3 tutors. The number of students was 230 including 65 medical students. The whole number who had been educated here in 1822, was 1,341, of whom 1,067 are now living.

Hartford, city, Hartford co. Ct. and one of the capitals of the State, is regularly laid out, on the W. bank of Connecticut river, 50 miles from its mouth, 14 m. N. Middletown, 34 N. N. E. New-Haven, 42 N. W. New-London, 74 W. Providence, 94 S. E. Albany, 98 W. S. W. Boston, 123 N. E. New-York. It is advantageously situated for trade, being at the head of sloop navigation, and having an extensive, fertile, and thrifty back country. The amount of shipping owned here is about 9,000 tons, and during the year 1816, 278 ships, brigs and schooners, and more than 200 smaller vessels ascended the river to this place. Pop. 6,901.

The public buildings are a state-house, a state arsenal, 2 banks, 2 insurance companies, 8 printing offices, from 4 of which newspapers are issued, a museum, an academy, an asylum for the deaf and dumb, and 6 houses for public worship. There are also 8 distilleries, and manufacturing establishments of various kinds. An elegant

bridge over the Connecticut, built at an expense of more than \$100,000, connects the town with East-Hartford.

The American Asylum for the education of the deaf and dumb, established in this city in 1817, is the first institution of the kind in America. It is under the direction of Rev. Thomas H. Gallaudet, who visited the celebrated schools in Europe to qualify himself for the charge. He has 5 assistants. The whole number of pupils in 1822, was 110, of whom 38 had left the Asylum and 72 were present. The Congress of the U. States has made a generous grant to the Asylum of more than 23,000 acres of land; and the Legislatures of some of the States have made appropriations for the support of pupils. The success of the institution has hitherto been highly gratifying, and the improvement of the pupils has equalled the most sanguine expectations of their friends.

Havannah, the capital of Cuba, on the N. coast, at the mouth of the Lagida, with the sea in its front. The harbour is by many esteemed the best in the world, being capable of containing commodiously 1,000 ships, without either cable or anchor, there being generally six fathoms water in the bay. The entrance is by a narrow channel, so very difficult of access, that only one vessel can enter at once. The channel is strongly fortified with platforms, works and artillery, for half a mile, which is the length of the passage. The mouth of this channel is secured by two strong castles. Besides these fortifications, the city is surmounted with works, all of them furnished with artillery even to profusion. A square citadel is erected near the centre of the town, and is called El Fuerte; this work has also heavy cannon. The city contains 11 fine churches, 2 hospitals, a dock-yard, lazaretto, and numerous other public buildings. During the stay of the fleet from Mexico, an immense commerce is carried on. The importance of this city and harbour has caused it to be repeatedly attacked. Pop. estimated at 60 or 70,000. The number of vessels which entered the port of Havannah in 1821 was 1,322, and the number cleared 1,254. Lon. 82° 23' W. Lat. 23° 9' N.

Herculaneum, ancient city, Italy, 5 m. E. by S. Naples. It was destroyed by an eruption of Mount Vesuvius, A. D. 79; and its site had long been a matter of doubtful discussion, as it had been completely buried under volcanic substances to a depth of 70 feet. At last, a peasant, in 1711, digging a well in his garden, found some pieces of fine marble. Excavations were soon commenced and a number of pillars, an amphitheatre in good preservation, a basilica, two temples, and a theatre were discovered. Whole streets have since been cleared, and are found to be paved and flag-

ged on the sides. A number of bronze statues of all sizes, have been obtained; likewise pillars of marble and alabaster, mosaics and paintings, many of them in high preservation, various ornaments of dress, kitchen utensils, household furniture, surgical instruments, and other implements of all kinds. The whole is calculated to convey a complete idea of the manners of the age, and to correct a number of erroneous ideas of the arts and habits of the ancients. The most valuable remains, however, are the manuscripts. These are all calcined, and a number of them sunk into dust when exposed to the air. About 1800, however, have been preserved; and there is reason to expect that many more may still be found, and among them, perhaps some of the missing classics. It appears that the inhabitants of this city had time to escape when it was destroyed, as very few skeletons are found, while at Pompeii the number of skeletons is very considerable.

Highlands, a natural division of Scotland, comprehending the mountainous part of the country to the north and north-west in contra-distinction to the Lowlands, which comprehend the south and south-east districts. The whole of this district is wild, rugged, and mountainous. The mountains lie parallel to the vallies, rising like immense walls on both sides, while the inhabited country sinks between them, with a lake or rapid river flowing in the centre. The inhabitants are hardy, active, and adventurous. The language is still the Gaelic. Their food is simple, being chiefly oat-meal, milk, &c. Of late years, industry and improvement have made a rapid progress. The inhabitants are now beginning to devote their labour and capital to their mines, their woods, their extensive pastures, and their fisheries.

Highlands, a mountainous tract in N. Y. through which the Hudson flows. The loftiest summits are Thunderhill, St. Anthony's nose, Sugar loaf, Butter hill, and Breakneck hill. On the W. shore stands the fortress of West Point. The passage through the highlands is about 18 miles, and is exceedingly grand.

Hillah, or *Hellah*, t. A. Turkey, in Irak Arabi, or Pachalic of Bagdad, about 60 m. S. of Bagdad, on the W. bank of the Euphrates, and on the borders of the great Syrian desert. Pop. 12,000. This city and its vicinity are believed to be the site of ancient Babylon. The observations of modern travellers, combined by the learned inquiries of major Rennell, appear to have left no doubt remaining upon the subject.—The structures of Babylon do not appear to have been much inferior in magnitude to those of Egypt; but being built of brick, cemented with straw and bitumen, they have not only mouldered from the lapse of time, but being easily loosened by art, have been carried away for the purpose of building elsewhere. Babylon has thus become a great quarry for the construction of all the modern cities in its neighborhood. The most remarkable of the ruins is about 4 miles S. of Hillah, and half a mile from the bank of the Euphrates. It is a pyramid nearly half a mile in circumference, and about 150 feet high, built entirely of brick dried in the sun, cemented in some places with bitumen and regular layers of reeds, and in others with slime and reeds. About a mile to the south of this pyramid is a very remarkable structure, which forms nearly a square of 700 yards in length and breadth and contains several walls in a pretty entire state, built of the finest bricks, cemented with lime. About 500 yards N. of this ruin, is a mound 1100 yards long, 800 broad, and 50 or 60 feet high; and on the W. bank of the Euphrates, about 6 miles S. W. of Hillah, is an oblong mound, 762 yards in circumference, and 198 feet high. These four masses of walls, mixed with earth and rubbish, are the only traces which remain of the mighty Babylon. Hillah is in lon. 44° 13' 15" E. Lat. 33° 34' N.

Himalah Mountains, a stupendous range of mountains, in Asia, the Imaus of the ancients. They commence near the borders of China, and running N. W. separate Hindostan from Tartary and Tibet, and passing into Persia, terminate near the borders of the Caspian sea. The Brahmapootra, the Sutlej, and the western branch of the Indus, rise on the N. side of this chain. The remaining branches of the Indus, the Jumna, and

the Ganges, rise on the S. side. Beyond the Indus to the westward, the chain takes the name of Hindoo Koosh or Indian Caucasus, and Parapomisan mountains. The part east of the Indus is the proper Himalah, and is 1400 miles long, extending from lon. 74° to 94° E. Dawalageri, the highest summit in the range, is estimated at 27,677 feet, and is the highest on the globe.

Hindoo Koh, or *Hindoo Koosh*. See *Himalah*.

Hindustan, country, Asia, comprehending, in its greatest extent, the countries between 65° and 95° E. lon.; Kandahar and Assam having formerly been reckoned in it. It is separated on the N. from Tibet and Tartary, by the Himalah mountains. In 1707, Hindostan was divided into the following provinces, all of which still retain the names they then bore. We have annexed the states to which they now respectively belong:—
Cabul, including Kandahar and Cashmere—The Afghans.

Lahore, or Punjab—Seiks.

Moultan—The Afghans, and several Hindoo or Seik chiefs.

Sinde—Several Mahometan chiefs.

Delhi—The British, and a number of Hindoo and Seik chiefs.

Serinagur—The rajah, for whom it has been lately recovered from the Nepaulese.

Napul—The rajah of, called the Ghoorkhali.

Bootan—The Lama of Tibet.

Assam—The rajah of Assam.

Ajmeer—The rajahs of Odeypore, Jypore, Joud-

pore, and several other Hindoo chiefs, some of whom are Mahrattas.

Agra—The British, Mahrattas, Jauts, and several other Hindoo chiefs.

Oude—The British, and Nabob of Oude.

Allahabad—The British, Mahrattas, and several Hindoo chiefs.

Bahar—British.

Bengal—British.

Gujerat, including Cutch—British, Mahrattas, and a number of independent petty chiefs.

Malwah—The Mahrattas, and several other Hindoo chiefs.

Berar—The Mahrattas and Nizam.

Orissa—British and Mahrattas.

Khandesh—Mahrattas.

Dowlatabad or Aurungabad—Mahrattas and Nizam.

Golconda—Nizam.

Circars—British.

Bajapore, or Visiapore—Mahrattas and Nizam.

The country south of the Kistna, in 1707, was possessed by several independent chiefs. It is now divided into the following districts:—

Concan—Belonging to the Mahrattas.

Mysore—Rajah of Mysore.

Cochin—Rajah of Cochin.

Travancore—Rajah of Travancore.

The remainder of the country is now in the possession of the British, viz. Canara, including Bednore, Malabar, Cudapah, Adoni, Carnatic, Coimbetoor, Dindigul, Madura, and Tinevelly.

The population, exclusive of the country west of the Indus, has been calculated to exceed 100,000,000. The bulk of these are idolaters, but are divided into three great sects or religions, viz. 1st, The worshippers of the Triad, Brahma, Vishnu, Siva. 2dly, The followers of Boodh. 3dly, The Jains. The next class in point of numbers, are Mahometans, who may amount to one-eighth of the number of Hindoos. They are divided into the two great sects of Soonies and Shi-ahs. The third class are the Seiks, who possess the province of Lahore. Their religion is described as pure deism. The fourth class are Christians: these are most numerous on the coast of Malabar. The fifth class are Jews: they principally inhabit the western coast, and are divided into white and black Jews. The sixth are Parsees, or followers of Zoroaster: they are principally to be found in Gujerat and Bombay.

Hispaniola, *Hayti*, or *St. Domingo*, one of the largest and most fertile of the West India islands, 390 miles long from E. to W. and from 60 to 150 broad. Lat. $17^{\circ} 37'$ to $20^{\circ} N$. This island was formerly divided between the French and Spaniards, the French occupying the western, and the Spaniards the eastern part; but the French have been expelled by the negroes, and the part which they occupied is called Hayti. The island in general is well watered and fertile, producing almost every variety of vegetable produce. The French part of the island is for the most part mountainous, and abounds with forests. It comprehends 2,500,000 acres, of which 1,500,000 were in high cultivation before the revolution in 1789. The Spanish part of the island contains about 3,200 sq. leagues. It consists chiefly of plains, of unrivalled fertility, and watered by numerous navigable rivers, but, owing to the indolence of the Spaniards, it is occupied chiefly by herds of domestic animals, such as swine, horses, and horned cattle, which have been allowed to run wild, and have multiplied beyond all computation.

The population of the French part of the island in 1789, according to the estimate of Edwards, was 30,831 whites, 24,000 free people of color, and 480,000 negro slaves. The Spanish part contained in 1785, according to census, 152,640; in 1798, according to Alcedo, 125,000, of whom 110,000 were free, and 15,000 slaves. In 1789, the French employed in the trade of St. Domingo 710 vessels, navigated by 18,466 seamen. The value of the exports in 1791, was £5,371,593. The principal articles were coffee to the amount of 84,617,338 pounds; sugar, 217,463 casks; indigo, 3,257,610

pounds; cocoa, 1,536,017 pounds; cotton, 11,317,226 pounds. Since the revolution, the commerce has greatly declined. From 1804 to 1806, according to Walton, only about 75 vessels arrived annually, with cargoes amounting to about £150,000 sterling.

The revolution commenced in 1791, when the blacks rose by common consent against their masters, and rendered the whole French part of the island a scene of massacre and devastation. The independence of Hayti was proclaimed on the 1st of July, 1801. After the expulsion of the French, a regular government was formed by the blacks, who soon divided into parties, under two rival chiefs, president Petion and king Christophe, the former occupying the southern part of the island, and the latter the northern part. These chiefs are now both dead, and the island has become the theatre of new revolutions. Various propositions have been made by France, for the purpose of bringing the inhabitants to their former subjection, but they have all been rejected with disdain.

Hottentots, a people who inhabit the S. part of Africa. Their country extends eastward along the sea coast from the Cape of Good Hope, to the territory of the Kaffres, and is bounded N. by the Orange river, which separates it from the country of the Boshuanas and Damaras. There are three races: the inhabitants of the colony, the Bosjesmans, and the Namaquas. The Hottentots of the colony are about 15,000 in number. They are a mild, quiet, and timid people, perfectly harmless, honest, and faithful, but naturally the most lazy people on earth. Their indolence is a real disease; they will rather fast and sleep the whole day, than seek food by any exertion. The *Bosjesman* Hottentots inhabit the most inaccessible parts of the Sneeuwberg and Nieuweldt mountains, which form the northern boundary of the colony. They are a wild and restless race. From their rugged haunts

they make incursions into the plantations, carry off the cattle and sheep, and frequently kill the farmers and their domestics. Their activity is incredibly great. They are said to be so swift, that on rough ground, horsemen have no chance with them. The *Namaqua* Hottentots, inhabit the N. W. parts of the colony.—The United Brethren established a mission among the Hottentots in 1786, which was renewed in 1792, since which the London Society have sent out many missionaries. The labors of both have been attended with the happiest effects. The Hottentots at several settlements, now cultivate the fields, own large numbers of cattle, exercise various trades, and contribute liberally to the support of religious and charitable institutions, exhibiting a wonderful proof of the power of Christianity in elevating men from sloth and misery to activity and comfort.

Housatonnuc, r. which rises in Berkshire co. Mass. and running S. across Connecticut, enters Long Island Sound between Milford and Stratford. In the latter part of its course, it is called Stratford river. It is navigable for small vessels, 12 miles to Derby. Between Canaan and Salisbury in the N. W. corner of the State, it has a perpendicular fall of 60 feet. A company was incorporated in 1822 for the purpose of constructing a canal from Derby along the valley of the Housatonnuc through New Milford, terminating at the N. line of the State in Canaan or Salisbury. From the survey of the route, the distance is found to be 66 miles, the ascent from tide water to the N. line of the State is about 612 feet. It is ascertained also that the canal may be easily continued to Stockbridge in Massachusetts.

Houssa, or *Haoussa*, country, of central Africa, on the Niger, with a capital of the same name. From all the accounts transmitted to Europe, it appears to be the most civilized and improved of

any of the native states of this continent ; but our knowledge of it is still exceedingly imperfect. According to the recent information of Mr. Bowdich, Houssa is situated some days journey to the north of the branch of the Niger called the Gambaroo. It is considerably larger than Tombuctoo, and superior to any other city N. of the Niger, except Bornou.

Hudson, city, port of entry, and cap. of Columbia co. N. Y. is finely situated on the E. bank of Hudson river, which is navigable to this place for the largest ships, 30 m. S. Albany, 130 N. New York. Lat. 42° 14' N. Its growth has been very rapid. It was founded in 1784; in 1786, the population was 1,500; in 1810, 4,048, and in 1820, of the village, 2,900, whole town, 5,310. The site of Hudson is a high point, which projects into the river, terminating in a bold cliff, on each side of which are bays of considerable extent. The city is regularly laid out in streets and squares, and contains an academy, 2 banks, 4 printing-offices, and 4 houses of public worship, 1 for Friends, 1 for Presbyterians, 1 for Methodists, and 1 for Episcopalians. The creeks on the borders of the town afford fine seats for mills and manufactories, and a few years since, Hudson was regarded as the third town in the state in manufactures, and the fourth in commerce. The amount of shipping in 1815, was 3,449 tons.

Hudson River, N. Y. one of the best for navigation in America, rises in the mountainous region to the W. of Lake Champlain, and pursuing a straight course a little W. of S. for more than 300 miles, communicates with the Atlantic, below New-York city. There are three remarkable expansions in this river, Tappan bay, or sea, Haverstraw bay, and a third between Fishkill and New Windsor. The only large tributary of the Hudson is Mohawk river. The other waters flowing into it are mere mill-streams. The bold and safe navigation afforded by the Hudson flowing as it does through a hilly and mountainous country, particularly through the highlands, is a remarkable fact in geography. It is navigable for ships to Hudson 130 miles; for large sloops to Albany, near the head of the tide, 160 m. from New-York; and for small sloops, to Troy, 6 miles further. It is connected by a canal with lake Champlain; and the grand canal, now in progress, will soon connect it with Lake Erie.

Hull, r. Eng. in Yorkshire, which falls into the Humber at Hull.

Hull, or *Kingston upon Hull*, s-p. Eng. in Yorkshire on the Humber, at the junction of the Hull. It is admirably situated for commerce, being connected by the wide spread branches of the Humber, and by navigable canals, with York, Sheffield, Leeds, Manchester, Liverpool, Nottingham, Birmingham, and Bristol, and is open on the east to the eastern coast and the continent. With these facilities for trade, a general spirit of commercial activity and enterprise has diffused itself, and this growing emporium is now the fourth, if not the third, in point of extent and importance, in the United Kingdom. The foreign trade is principally to the Baltic, but a regular traffic is also kept up to the southern parts of Europe, to the West Indies, and to America. Hull is more extensively engaged in the whale fishery, by far, than any other port in Britain. The number of whale ships, for several years past has been about 60. The coasting trade for coals, corn, wool, manufactured goods, &c. is prodigious; and the inland trade exceeds that of any other English port. Within the last 30 years, the town has been greatly enlarged, and is continually receiving new additions and improvements. The old dock was begun in 1775; it is 700 yards long, 85 wide, and 22 deep, and will contain 130 vessels of 300 tons; it covers an area of 10 acres. The Humber dock was begun in April 1807; it opens into the Humber by a lock which will admit a 50 gun-ship. Hull was formerly a place of great strength, but the walls have been entirely demolished by the

extension and improvements of the town. It sends 2 members to parliament. Pop. in 1811, 28,792; but including Drypool, Sutton, Sculcoates, and those absent at sea, it will be upwards of 40,000. 38 m. S. E. York, 174 N. London. Lon. $0^{\circ} 16'$ W. Lat. $53^{\circ} 45'$ N.

Hungary, kingdom, in the S. E. of Europe, forming a considerable part of the Austrian do-

minions, bounded W. by part of Germany, N. by Galicia, from which it is separated by the Carpathian mountains; E. by Transylvania, and Wallachia; S. by Turkey, Slavonia, and Croatia, from which it is separated by the Drave and the Danube. It lies between $16^{\circ} 5'$ and $27^{\circ} 6'$ E. lon. and $44^{\circ} 13'$ and $49^{\circ} 26'$ N. lat. Extent, 84,500 sq. miles. Pop. estimated at 7,300,000.

The frontier of Hungary, on almost every side, consists of lofty mountains, while the interior is an immense plain. The mountains contain numerous mines of gold, silver, lead, copper, &c. The annual produce of these mines is about 21,000 marks (each of 8 oz.) of gold; 93,000 marks (ditto) of silver; 23,000 cwt. of lead; 48,500 cwt. of copper; 41,000 cwt. of forged iron; and 500 cwt. of zinc. Agriculture is extremely backward; but Hungary has long been celebrated for its pastures, and can vie with England in regard to cattle. The inhabitants consist of a great variety of different tribes; the majority are Slavonians; next to them, in point of number, are the Hungarians proper; the descendants of Germans are numerous, particularly in the west; the Walachians inhabit the Bannat and other counties in the S. and E.; of the minor tribes, the chief are Greeks, Armenians, Jews, and Gypsies.—The constitution of Hungary is a compound of monarchy and aristocracy. The inhabitants consist of three classes, nobles, citizens, and peasants. All political rights are enjoyed by the two former, who assume to themselves the title of the nation, while the peasantry are treated as an inferior race. The latter alone pay taxes. The whole number of nobles is about 326,000. The principal exports are corn, tobacco, wine, and wool. The imports are chiefly manufactured goods and colonial produce. The revenue is between £3,000,000 and £4,000,000 sterling, forming nearly one third of the whole revenue of Austria. The standing army consists of 63,000 men. There is also the permanent militia, established in a tract of country along the southern frontier. In this district every man is born a soldier. It is governed by a military constitution, and the inhabitants are exempted from taxes, on condition of being ready to take arms, when called on by government. The numbers of the different religious sects, including Slavonia and Croatia, are estimated as follows: Roman Catholics, 4,000,000, Greeks 2,500,000, Calvinists 1,300,000, Lutherans 700,000, Jews 30,000. The protestants were formerly oppressed, but since the time of Joseph II. (1780,) there has been complete toleration, and all sects are now zealous in support of the Austrian government.

Huron, one of the great lakes on the boundary between the U. S. and Canada. Its greatest length from E. to W. is 213 miles, and from N. to S. 160, and it is estimated to contain 5,000,000 acres. Lon. 80° 10' to 84° 30' W. Lat. 43° 20' to 46° 10' N. On its N. W. side it receives the waters of Lake Superior through the river St. Mary's, and is connected with Lake Michigan by the straits of Michillimackinac. It discharges itself at its southern extremity, through St. Clair river, into Lake St. Clair. The Manitoulin islands stretch from E. to W. along the northern side of the lake for 160 miles. Many of them are from 20 to 30 miles long, by 10, 12, and 15 broad; besides this great chain, there are many others of inferior dimensions, which render the navigation intricate, and in some places, particularly towards the west end, dangerous. The shores of this lake are represented as sterile; but they have been very imperfectly explored. The steam-boat from Lake Erie occasionally makes a trip across this lake to Mackinaw.

Iceland, isl. in the Atlantic ocean, belonging to
Denmark, about 280 m. long from E. to W. and
210 from N. to S. Extent, 40,000 square miles.
95 m. from Greenland, 220 from the Faroe isles,
and 330 from Drontheim in Norway. Lat. 63° to
67° N. Lon. 12° to 25° W. Pop. 50,000. Its
surface is rugged and mountainous; its soil pro-
duces no corn, and hardly any of the necessities
of life. No part of the globe presents such a num-
ber of volcanic mountains, so many boiling springs
or such immense tracts of lava. Mount Hecla is
the principal volcano. It is 5,000 feet high, and
has sometimes thrown out stones and lava to the
distance of 150 miles. There have been 16 great
eruptions; but with one exception, (Oct. 1818,) it
has been quiet since the middle of the last century.
The spouting springs, called the Geysers, are on the
west side of the island, 16 m. N. of Skalholt. They
throw into the air great jets of boiling water,
accompanied with a noise like the firing of can-
non. The height of the jets is commonly from 90
to 100 feet; but it is said sometimes to exceed
200. The exports are fish of all kinds, oil, tallow,
butter, wool, worsted stockings, down and feath-
ers; also the skins of sheep, foxes and other ani-
mals. The food of the Icelanders consists almost
entirely of fish. Their manners are exceedingly
simple; and they display a strong attachment to
their native land, which, in their estimate, is the
finest of the works of God. They are grave, and
in general religious. The language is the Goth-
ic, and has been preserved with little change,
while Swedish and Danish, derived from the same
source, have undergone great modifications. There
are few countries where a greater proportion of
the inhabitants are accustomed to read, than in
Iceland. Their stock of books is not large, but
they lend to each other, and frequently copy what
they borrow. A distressing scarcity of Bibles that
prevailed throughout the island, was relieved by

a liberal distribution from Britain, in 1815: the version was in the Icelandic, and was received with the greatest thankfulness by the poor natives. In the dark ages, when continental Europe was immersed in such ignorance, the Icelanders attained a high degree of literary improvement: they cultivated poetry with success, and their historical writings are still considered among the most authentic documents for the antiquities of the north. The religion of Iceland is the Lutheran. The number of churches exceeds 300.

Illinois, r. is formed by the union of the Kankakee and the Desplanes, in the N. E. part of Illinois, and traversing the State of Illinois in a S. W. direction nearly 400 miles, joins the Mississippi, 18 m. above the mouth of the Missouri, 1,168 above New Orleans, 1,400 from Buffalo, N. Y. on lake Erie. The river is 400 yards wide at its mouth. It has a gentle current, unbroken by rapids, and is navigable for boats throughout its course. The Desplanes, one of its branches, interlocks with the Chicago, a river of lake Michigan, and a canal is in contemplation to open a navigation between them.

Illinois, one of the U. S. bounded N. by the N. W. territory; E. by Indiana; S. by Kentucky; and W. by Missouri. It extends from 87° 17' to 91° 50' W. lon. and from lat. 37° to 42° 30' N. Area, about 50,000 sq. miles or 32,000,000 acres. Pop. in 1810, 12,282; and in 1820, 55,512. Engaged in agriculture 12,395, in commerce 233, in manufactures 1,007. The state is bordered on three sides by the great rivers Wabash, Ohio, and Mississippi; its N. E. corner touches upon lake Michigan, and it is intersected by the Illinois and Kaskaskia, which run from N. E. to S. W. into the Mississippi. The settlements at present are principally confined to the banks of the Mississippi, the Kaskaskia and its branches, and there are a few on the Wabash and the Ohio. The northern and central parts of the state have been very imperfectly explored. In 1817, there were in Illinois upwards of 16,000,000 acres of land belonging to the United States, obtained by purchase from the Indians. The portion of these lands lying between the Illinois and the Mississippi, has been assigned by Congress as bounty lands to the soldiers who enlisted during the late war. The whole amount surveyed is about 5,530,000 acres, equal to 8,640 sq. miles, and is divided into 240 townships. This land is represented to be of an excellent quality.

The greater part of the state is either flat or rolling. Extensive prairies constitute two-thirds of its surface. The soil may be divided into six classes, 1. Bottoms, bearing a heavy growth of timber. This land is of the first quality, and is found on all the principal rivers. It varies in width from 50 rods to 2 miles, and is of inexhaustible fertility. 2. Newly formed land found at the mouths of rivers. There are many thousand acres of this land at the mouth of the Wabash, and at the confluence of the Ohio with the Mississippi. It is annually inundated, and is very unhealthy. 3. Dry prairies, approaching the river and bordering on the bottom land, but elevated from 30 to 100 feet. The prairies of the Illinois river are the most extensive of any east of the Mississippi, and have alone been estimated at 1,200,000 acres. This soil is not inferior to the first rate river bottoms. 4. Wet prairies, found

remote from rivers, or at their sources. The soil is generally cold and barren, abounding with swamps and ponds, and covered with a tall coarse grass. 5. Timbered land, moderately hilly, well watered, and of a rich soil. 6. Hills, of a sterile soil, and destitute of timber, or covered with stinted oaks and pines.—Corn is at present the staple production. Wheat does well, except on the bottoms, where the soil is too rich. Tobacco grows to great perfection. Flax, hemp, oats, Irish and sweet potatoes, do as well as in Kentucky. Among the minerals are iron, coal, and copper. Salt springs also are numerous.

Illinois was admitted into the Union in 1818. At the time of its admission the government of the U. S. granted to the State on certain conditions, one section or thirty-sixth part of every township for the support of schools; and three per cent. of the net proceeds of the U. S. lands, lying within the State, for the encouragement of learning, of which one-sixth part must be exclusively bestowed on a college or university. As a farther provision for the university, two entire townships have been given to the legislature. Two per cent. of the proceeds of the U. S. lands are also to be expended under the direction of Congress, in making roads leading to the State. As the condition of these grants, the convention which formed the constitution of the State, provided by an ordinance, which is irrevocable without the consent of the U. S. that all lands sold by the U. S. shall be exempt from taxation for five years from the day of sale; also, that the bounty lands granted for military services, during the late war, shall if they continue to be held by the patentees, or their heirs, remain exempt from taxes for three years from the date of the patents; and that the lands belonging to the citizens of the U. S. residing without the state, shall never be taxed higher than lands belonging to persons residing therein. The constitution provides that no more slaves shall be introduced into the State. The seat of government is at Vandalia.

A survey has been authorized by the State of a canal to unite the head waters of the Illinois with lake Michigan. The Illinois, and the Chicago, a southern river of lake Michigan, are so connected, that in freshets boats pass readily from one to the other. See *Desplanes*. For the improvement of this navigation, the government of the U. S. have appropriated 100,000 acres of land. This canal will open, probably at less expense than any other, a communication between the great lakes and the Mississippi; but as vessels, in reaching it, must pass through the straits of Michilimackinac, it is probable that some other canal, connecting lake Erie more directly with the Mississippi, will be first completed.

Several of the Hebrides also are attached to the county. These are Harris, North and South Uist, Benbecula, Sky, Barra, Eigg, and some smaller islets. The surface of this county is extremely rugged and uneven, consisting of vast ranges of mountains, separated from each other by narrow and deep vallies. It abounds with oak and fir timber. Pop. in 1811, 78,336.

Inverness, a royal burgh, Scotland, and cap. of Inverness co. is on both sides of the river Ness, at its entrance into the Moray frith. Within the last 40 years this town has been rapidly improving. From its geographical position, it is well calculated to be the emporium for all the northern counties. In 1791, the population was 5,107; in 1801, 8,742; in 1811, 11,383; and in 1819, it may be estimated at 14,000. The principal manufactures are of hemp and flax. The harbour is safe and commodious, allowing vessels of 500 tons to unload at the quay, and vessels of any size can safely ride in the frith, within a mile of the town. 19½ m. S. S. W. Iona, *Icolmkill*, or *I-columb-kill*, one of the western islands of Scotland, in the Atlantic ocean, separated from the western point of Mull by a narrow channel, called the Sound of I. It is called by Bede, in his history, Hii; but the proper name is I, sounded like ee in English. The island is about 2½ miles long, and 1 broad. It is chiefly interesting for the ruins of its ancient establishments, erected when it was the retreat of learning, while western Europe lay buried in ignorance and barbarity. The religious edifices, of which the ruins now only remain, were established about the year 565, by St. Columba, who left Ireland, his native country, and established himself in this island, to preach Christianity to the Picts. After Christianity was thus diffused throughout the northern parts of Scotland, this island became a seat of learning and of piety. In time, it rose to be the head of the Christian church in Scotland, whither the young princes of Scotland and Northumberland were sent for instruction. The island is 36 miles distant from the mainland: Pop. in 1782, 277; in 1791, 323; and in 1808, 336.

Ionian Islands, sometimes called the *Republic of the Seven Islands*, a small and recently constituted republic in the S. E. of Europe, consisting of 7 principal islands, and a number of islets, extending along the S. W. coast of Greece, from 36° to 40° N. lat. and from $19^{\circ} 30'$ to $23^{\circ} 10'$ E. lon. The seven principal islands are Corfu, Cephalonia, Zante, Santa Maura, Ithaca, or Thiaki, Cerigo, and Paxo. Extent, about 1,500 square miles. Pop. by a return made in 1807, 206,000.—The soil in the plains and vallies is very fertile. The productions are corn, vines, olives, currants, cotton, honey, wax, &c. Vines and olives form the chief source of income to the inhabitants. The imports are salt fish, sugar and drugs; also a limited quantity of woollen, linen and hardware. In the arrangements made at the congress of Vienna in 1815, it was agreed that the Ionian republic should be put under the protection of Great Britain. A constitution for this small state was soon after drawn up and ratified by the British government in July 1817. It vested the legislative power in a senate of 29 representatives.

Ipsambul, a celebrated temple, in Egypt, which was recently discovered by Mr. Burckhardt, and is situated immediately on the banks of the Nile between Ibrim and Syene. It is excavated from the solid rock, and when discovered was nearly two-thirds buried under the sand, which has prob-

ably covered it for more than 2,000 years. After great labor Mr. Belzoni succeeded in clearing away the sand, and arrived at the door way of the temple. On entering, he found the interior divided into numerous chambers, and spacious halls, supported by massy pillars, and adorned with colossal statues. The walls are covered with beautiful paintings representing battles, storming of castles, triumphs over the Ethiopians, sacrifices, &c. The outside of the temple is 117 feet wide and 86 feet high. In front there are 4 enormous sitting colossi, the largest in Egypt or Nubia, except the great sphinx at the pyramids, to which they approach in the proportion of about two-thirds. On the top of the temple there is a row of monkeys, 21 in number, in a sitting posture, and each 8 feet high and 6 across the shoulders.

Ipsara, or *Ipseru*, (an. *Psyra*,) isl. of the Archipelago, 12 m. N. W. Scio. Lon. 25° 36' 30" E. Lat. 38° 30' N. Pop. about 16,000. It has one small village with a good port, and owns 100 sail of large ships and polacres, and from 300 to 500 small craft. This island is tolerably productive in wine and fruit, but the inhabitants depend on their commerce for subsistence.

It contains a handsome court-house, a massy stone jail, and 5 houses for public worship, 4 for Congregationalists, and 1 for Baptists. There is an excellent stone bridge across Ipswich river, with 2 arches. By means of a canal across Gloucester neck, the communication between the harbor and Massachusetts bay is facilitated, a distance being saved of 20 miles round Cape Ann. On Ipswich river extensive iron manufactories are about to be erected. The supreme judicial court, and the court of common pleas are occasionally held in this town. The amount of shipping in 1815, was 1,776 tons.

Ireland, a large and fertile island of Europe, in the Atlantic ocean, lying W. of Great Britain, from which it is separated by the Irish sea, or St. George's channel. It lies between lon. 6° and 10° 40' W. and lat. 51° 15' and 55° 13' N. Extent, 32,201 sq. miles, or 20,437,974 English acres. Ireland is divided into four great provinces, viz. Ulster, Leinster, Connaught, and Munster, which are again divided into 32 counties, containing 3,436 parishes.—The face of the country affords a pleasing variety of surface. The harbors are very numerous: the principal are Waterford and Cork on the S.; Bantry and Dingle on the S. W.; the estuary of the Shannon, and the vast bay of Galway on the W.; Lough Swilly and Lough Foyle on the N. The climate of Ireland is in general more temperate than the climate of other countries in the same latitude. It is more moist than that of Great Britain, the winds from the W. and S. W. are more prevalent, and the seasons more irregular. The soil is, generally speaking, a fertile loam, but remarkably shallow, the rocks appearing on the surface, or at no great depth, even in the most flat and fertile parts. The bogs of Ireland form a very remarkable feature of the country. In 1809, commissioners were appointed to inquire into the extent of Irish bogs, and whether it was practicable either to drain or cultivate them. In their reports, they state the extent of these bogs at 2,330,000 English acres. They are principally confined to the province of Connaught, and a part of Leinster. This extensive tract resembles in its form a broad belt drawn across the centre of Ireland, with its narrowest end nearest the capital, and gradually extending in breadth as it approaches the Western ocean. The commissioners were convinced that it was perfectly practicable to drain these immense morasses, and convert them to the purposes of tillage.—The agriculture of Ireland is rather in a backward state, though in many counties improvements begin to be adopted. Oats are most extensively cultivated; they form the principal food of the people. Ireland has been long celebrated for the immense quantities and excellent quality of potatoes which it produces. The dairy husbandry is the most extensive and the best managed in Ireland.—The linen manufacture is the staple branch of Irish industry. The cotton manufacture is spreading rapidly. The distillation of spirits has long been carried on to a great extent. The exports are corn, hides, butter, provisions, linen, whiskey, &c.

The exports from Ireland for 1816, amounted to 6,703,799*l.*; the imports to 5,084,890*l.* The exports for 1814, amounted to 7,139,435*l.* and the imports to 7,245,043*l.* The number of vessels belonging to Ireland, amounts to between 1,100 and 1,200, navigated by between 5,000 and 6,000 sailors, men, and boys. The revenue amounted, in 1817, to 9,109,171*l.*; the expenditure to 14,612,560*l.*; and the debt to 141,441,180*l.* The Irish peasantry are, in general, sunk in poverty and ignorance. They are miserably ill lodged, in a hovel of four mud walls, with one entrance, and frequently without either a window or a chimney. Their food consists almost entirely of milk and potatoes. Within a few years, however, great efforts have been made by religious charitable societies in Great Britain, to extend the blessings of education and religious instruction to the Irish people, and with very good success.—The established religion is the Protestant, though the great majority of the people are Catholics. Within the last 50 years, Ireland has rapidly increased in population. In 1754, the number of inhabitants was 3,372,634; in 1791, 4,208,612; and in 1821, 6,846,949.

Ispahan, or *Spahawn*, formerly the capital of Persia, and long celebrated as one of the most splendid cities of the east. It is on the river Zenderoud, in the province of Irak. When visited by Chardin, at the beginning of the last century, its magnificence was such, that no city of the east could compare with it, except the capitals of Hindostan and China. In 1722, it was taken by the Afghans, and many of its most superb edifices entirely destroyed by those barbarous invaders. It is still, however, a great and magnificent city. Kinneir estimates the population at 200,000, and Morier, in 1808, at 400,000. Ispahan, according to Chardin, is 24 miles in circuit, and contained 172 mosques, 48 colleges, 1,800 caravanseras, and 273 public baths. The most splendid edifice was the palace, built by Scha Abbas. It is said to have been five miles in circuit, including the gardens, and to have surpassed every thing of the kind which is to be found in Europe. The walls and buildings of the palace remain, but it has been stript of all its costly furniture. The streets of the city are narrow, winding, and irregular. The houses have a mean appearance, being built mere-

ly of bricks dried in the sun, and covered with flat roofs. The manufactures of Ispahan are still very extensive. In gold brocade this city is unrivalled. It is also the greatest emporium of inland commerce in the Persian empire, being the chief medium of communication with India and Cabul on one side, and Turkey on the other. After being desolated by foreign wars and revolutions, this city has of late begun to revive, through the exertions of Hajee Mahomed Hussein Khan, who from the lowest origin, has raised himself to the first situations in the empire, and acquired immense wealth, which he employs in the improvement of his native city. He has just completed a new royal palace, which equals in elegance any of the old ones. Lon. 52° 50' E. Lat. 32° 25' N.

Nothing can exceed the beauty and diversity of the natural scenery of Italy. Its mountains present every variety of form and elevation, of rugged rocks and precipices, thick and extensive forests, water-falls, and all the component parts of picturesque beauty. The clearness of the atmosphere gives to every object a remarkable brightness of colouring and distinctness of outline.

In respect of climate, Italy is one of the most favoured countries in Europe. The air is mild and genial, the excessive heats of summer being moderated by the influence of the mountains and surrounding sea.

The most important productions of the country are vines, olives, and other fruits of great variety, and of the most delicious quality. Cotton, and still more silk, are cultivated to a great extent. Lombardy is the chief corn country. Skilful agriculture is confined to the North: in the centre and south it is at a very low ebb.

Italy contains few manufactures. Silk is the staple article; and after it come linen and woolen.

The established religion is the Roman Catholic; but all other sects are tolerated. The number of archbishops for the whole country is 38. The number of inferior ecclesiastics is surprisingly great. Italy contains an extraordinary number of hospitals, erected, and in general provided for, in former ages. The principal universities are those of Rome, Bologna, Padua, Parma, Pisa, Pavia, Naples, and Palermo.

Antiquities form one of the grand objects of interest to the traveller, while their illustration constitutes a distinct branch of study with the *literati* of the country.

Italy, Kingdom of, the name of a state created by Bonaparte, out of the various provinces of the north of Italy, and first known by the name of the Cisalpine republic. It comprised Lombardy, the duchy of Modena, the Venetian territory, the papal legations of Ferrara, Bologna, Romagna; the districts of Chiavenna, Bormio, and the Valteline, (belonging formerly to the Grisons;) and finally the eastern part of Piedmont, lying between the Ticino and the Sesia. It contained 24 departments, and a population of 6,460,000. The events of 1814 overthrew this short-lived monarchy.

Italy, Austrian, a kingdom of Upper Italy, belonging to the house of Austria, comprehending the whole of Italy east of the Ticino and north of the Po. It is bounded N. by Switzerland and

Austria; E. by Illyria; S. E. by the Adriatic; S. by the States of the church, of Modena, and of Parma, and W. by Piedmont. Extent, 18,290 sq. miles Pop. 4,014,000. The name given to this kingdom, in treaties and other public acts, is the *Lombardo-Venetian Kingdom*. The country is in general level consisting of large and beautiful plains. It is in a high state of cultivation; and on account of its extreme fertility, has been frequently called the garden of Europe. The products are rice, wheat, vines, fruit, and large quantities of silk, flax, and hemp. The exports consist chiefly of rice, corn, and cattle; also of silk, the value of which annually sent out of the country is computed at from £400,000 to £500,000.

Austrian Italy was erected into a kingdom by an edict of the emperor of Austria, dated 7th April 1815. Though declared to form a monarchy inseparable from the Austrian empire, it has a separate constitution of its own, at the head of which is a prince of the imperial family, with the title of viceroy. His residence is at Milan. The administration of each of the two great divisions is in the hands of a governor and government college, in subordination to the court of Vienna.
